The investigations have been grouped to several geometric scales under the disciplines of geology, geohydrology and groundwater chemistry, transport of solutes and mechanical stability. Geological mapping and geophysical measurements have been made both on a regional and on a site scale. On the site scale additional surface measurements, drilling of 35 percussion boreholes and 19 cored boreholes was made. The results of the geological investigations show that the Aespoe bedrock is a complex mixture between Smaaland granite, Aespoe diorite and fine grained granite. Hydraulic and chemical data was collected from existing well records within the Kalmar County. Hydraulic conductivity measurement and interference pumping tests were made in the core drilled holes and to some extent in the percussion holes. The hydraulic conductors are basically the fracture zones, but one of the most important is a NNW striking system of single fractures which is difficult to distinguish geologically. The chemical conditions of the groundwater and the fracture minerals form water bearing sections of the core drilled holes have been examined. Water samples were collected from percussion boreholes. The groundwater can be divided into three categories. Fresh water down to approximately 50 m depth. Mixed fresh and seawater 50-100 m, present and/or relict seawater 100-500 m and old (relict) seawater below a depth of 500 m. An important task in the evaluations is to set up 'conceptual models'. These models are the basis for calculation of the ambient groundwater situation and the way in which the hydrological regime will change during the excavation of the laboratory. In order to allow for different levels of detail the conceptual models are established on different scales. The geometrical scales chosen are 500 m, 50 m and 5 m. (au).

7601 (SKB-TR--91-24) **Hydrogeological conditions in the Finnsjoen area. Compilation of data and conceptual model.** Andersson, J.E. (Swedish Geological Co., Uppsala (Sweden)); Nordqvist, R.; Nyberg, G.; Smellie, J.; Tiren, S. Swedish Nuclear Fuel and Waste Management Co., Stockholm (Sweden). Feb 1991. 205p. Order Number DE92613492. Source: OSTI; NTIS (US Sales Only); INIS.

In the present report all available data gathered from the Finnsjoen area of potential use for numerical modelling are compiled and discussed. The data have been collected during different phases during the period 1977-1989. This inevitably means that the quality of the measured and interpreted data varies in accordance with the continuous developments of improved equipments and interpretation techniques. The present report is an updated version of the SKB progress report 89-24 with the same title and authors, see introduction. (au).

7602 (SKB-TR--91-25) **The role of the disturbed rock zone in radioactive waste repository safety and performance assessment. A topical discussion and international overview.** Winberg, A. (Conterra AB, Goeteborg (Sweden)). Swedish Nuclear Fuel and Waste Management Co., Stockholm (Sweden). Jun 1991. 77p. Order Number DE92613493. Source: OSTI; NTIS (US Sales Only); INIS.

A discussion was presented of the role and relative importance of the disturbed rock zone (DRZ) around the underground openings of a repository for nuclear waste in crystalline rock. The term disturbed rock zone was defined and possible criteria to be sued to distinguish if from undisturbed rock was suggested. The processes decisive for the hydraulic characteristics of the DRZ were discussed. With regard to the integral hydraulic characteristics of the DRZ, the effects of the excavation methodology, stress redistribution, thermal changes, chemical changes and backfill were discussed. A review of in-situ observations of the DRZ was provided. Model analysis where the DRZ has been explicitly or implicitly represented, either from a phenomenological and performance assessment aspect were reviewed. The implications of the disturbed rock zone for the safe performance of a nuclear waste repository were discussed. Conceptual models for the geometry of the DRZ and hydraulic conductivity distribution in the DRZ were suggested. (au) (82 refs.).

7603 (STRIPA-IR--91-02) **Site characterization and validation - monitoring of head in the Stripa mine during 1989.** Carlsten, S. (Swedish Geological Co., Uppsala (Sweden)); Nyberg, G.; Tammela, P.T.; Olsson, O.; Sehlstedt, M. Swedish Nuclear Fuel and Waste Management Co., Stockholm (Sweden). Nov 1990. 204p. Order Number DE92613494. Source: OSTI; NTIS (US Sales Only); INIS.

The groundwater head has been monitored in some 50 borehole sections surrounding the site which is investigated as a part of the site characterization and validation project. This report contains basic data on the head monitoring system and graphical presentation of the results obtained during 1989. (au).

7604 (STRIPA-IR--91-12) **Site characterization and validation - monitoring of head in the Stripa mine during 1990.** Carlsten, S. (Swedish Geological Co., Uppsala (Sweden)); Nyberg, G.; Tammela, P.T.; Olsson, Olle. Swedish Nuclear Fuel and Waste Management Co., Stockholm (Sweden). Apr 1991. 219p. Order Number DE92613495. Source: OSTI; NTIS (US Sales Only); INIS.

The groundwater head has been monitored in 45 borehole sections surrounding the site which is investigated as a part of the site characterization and validation project. This report contains basic data on the head monitoring system and graphical presentation of the results obtained during 1990. (au).

7605 (STRIPA-IR--91-15) **Inflow measurements on the D-holes at the Stripa mine.** Danielson, J. (SGAB, Uppsala (Sweden)); Ekman, L.; Joensson, S. Swedish Nuclear Fuel and Waste Management Co., Stockholm (Sweden). Jun 1991. 135p. Order Number DE92613496. Source: OSTI; NTIS (US Sales Only); INIS.

Flow measurements in 0.5 m-sections in the D-boreholes at Stripa were performed by Swedish Geological Company during February to April 1991. The purpose of the measurements was to determine in detail the inflow to an array of boreholes through an undisturbed volume of fractured granite. A lower measurement limit of $1x10^{-4}$ l/min was stipulated for the measurements in 0.5 m-sections. However, in practice the inflow measurements were initially performed in 4.5 m-sections, which made it possible to reach an even lower measurement limit. Furthermore, by this method the tests were speeded up, because in all 4.5 m-sections where the flow fell below $1x10^{-4}$ l/min, no detailed measurements in 0.5 m-sections were necessary. The accuracy of the measurements was 5% for flow in the interval greater than or equal to $1x10^{-3}$ l/min and 100% for flow below that value. The boreholes D5 and D6 have relatively high inflows to the entire boreholes, about $450x10^{-3}$ l/min respectively $90x10^{-3}$ l/min. The inflow values to the remaining boreholes are much lower: between about $3x10^{-3}$ and $13x10^{-3}$ l/min. The flow distribution along the boreholes is rather similar in boreholes D1, D3 and D6, with flow maxima at about 80-90 m borehole length. At this level peaks are found also in boreholes D2, D4 and D5, but in the latter boreholes increased flow values occur also closer to the borehole outlets. Indications of hydraulic connections between different boreholes were observed. Inflation of the packers at certain locations in one borehole caused in some cases flow changes in neighbouring boreholes. (au).

7606 (STRIPA-TR--91-07) **Site characterization and validation - results from seismic crosshole and reflection measurements - Stage 3.** Cosma, C. (Vibrometric Oy, Helsinki (Finland)); Heikkinen, P.; Keskinen, J.; Korhonen, R. Swedish Nuclear Fuel and Waste Management Co., Stockholm (Sweden). Jan 1991. 66p. Order Number DE92613497. Source: OSTI; NTIS (US Sales Only); INIS.

The purpose of the site characterization and validation (SCV) project is to predict groundwater flow and nuclide transport in a previously unexplored volume of the Stripa granite. The project comprises five stages. This report concerns the borehole seismic investigations carried out during stage 3. The objective has been to review the localization and characterization of fractured and altered rock zones performed in stage 1. The seismic acquisition apparatus and the data processing techniques have been the subject of major changes with respect to stage 1 and their features are outlined. The use of boreholes is important, as surveys performed from drifts and surface permit only a limited probing angle of the site volume. The approach consists of applying in parallel two methods: two-dimensional crosshole tomography and a new three-dimensional reflection imaging technique. The reflection method detects changes in acoustic impedance, which is an accurate way of finding the boundaries of rock features. The tomographic method maps variation of the rock properties, like wave velocity and attenuation. The fractured zones from the SCV site produce a faint seismic response. Extensive processing was used to achieve a unambiguous interpretation of the reflection data. The tomographic analysis of velocities reveals and extremely flat variation of 1-3%. (au).

7607 (STRIPA-TR--91-10) **A comparison of predictions and measurements for the Stripa simulated drift experiment.** Hodgkinson, D. (Intera Sciences, Henley-on-Thames (United Kingdom)). Swedish Nuclear Fuel and Waste Management Co., Stockholm (Sweden). Feb 1991. 59p. Order Number DE92613498. Source: OSTI; NTIS (US Sales Only); INIS.

This paper presents a comparison of measurements and predictions for the simulated drift experiment based on groundwater flow to the D-holes at the SCV site. The comparison was carried out on behalf of the Stripa task force on fracture flow modelling, as a learning exercise for the validation exercise to be based on flow to the validation drift. The paper summarises the characterisation data and their preliminary interpretation, and reviews the fracture flow modelling predictions made by teams from AEA Harwell, Golder Associates and Lawrence Berkeley Laboratory. The predictions are compared with each other and with the D-hole inflow measurements, and this experience is used to provide detailed feedback to future experimental and modelling work. (35 refs.).

7608 (STRIPA-TR-91-11) **The Stripa project. Annual report 1990.** Swedish Nuclear Fuel and Waste Management Co., Stockholm (Sweden). Jul 1991. 164p. Order Number DE92613499. Source: OSTI; NTIS (US Sales Only); INIS.

The Stripa project is an international project being performed under the sponsorship of the OECD Nuclear Energy Agency (NEA). The project concerns research related to the disposal of highly radioactive waste in crystalline rock. The research and development division of the Swedish Nuclear Fuel and Waste Management Co. (SKB) has been entrusted with the management of the project, under the direction of representatives from each participating country. The aim of this report is to inform the OECD Nuclear Energy Agency and the participants in the project about the general progress of work during 1990.

7609 (STRIPA-TR-91-14) **Tracer transport in fractures: analysis of field data based on a variable - aperture channel model.** Tsang, C.F. (LBL, Univ. of California, CA (United States)); Tsang, Y.W.; Hale, F.V. Swedish Nuclear Fuel and Waste Management Co., Stockholm (Sweden). Jun 1991. 63p. Order Number DE92613500. Source: OSTI; NTIS (US Sales Only); INIS.

A variable-aperture channel model is used as the basis to interpret data from a three-year tracer transport experiment in fractured rocks. The data come from the so-called Stripa-3D experiment performed by Neretnieks and coworkers. Within the framework of the variable-aperture channel conceptual model, tracers are envisioned as travelling along a number of variable-aperture flow channels, whose properties are related to the mean b^- and standard deviation σ_b of the fracture aperture distribution. Two methods are developed to address the presence of strong time variation of the tracer injection flow rate in this experiment. The first approximates the early part of the injection history by an exponential decay function and is applicable to the early time tracer breakthrough data. The second is a deconvolution method involving the use of Toeplitz matrices and is applicable over the complete period of variable injection of the tracers. Both methods give consistent results. These results include not only estimates of b and σ, but also ranges of Peclet numbers, dispersivity and an estimate of the number of channels involved in the tracer transport. An interesting and surprising observation is that the data indicate that the Peclet number increases with the mean travel time: i.e., dispersivity decreasing with mean travel time. This trend is consistent with calculated results of tracer transport in multiple variable-aperture fractures in series. The meaning of this trend is discussed in terms of the strong heterogeneity of the flow system. (au) (22 refs.).

7610 (UCRL-ID-107469) **Apparatus for California Waste Extraction Test.** Harrar, J.E. Lawrence Livermore National Lab., CA (United States). 10 Jun 1991. 5p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. Order Number DE92003048. Source: OSTI; NTIS; GPO Dep.

An apparatus has been designed that is suitable for performing the extraction test mandated by the state of California for the characterization of solid and semisolid hazardous waste. The apparatus enables mixing of the waste with the extraction fluid in the absence of air, and all parts contacting the waste mixture are either fluoropolymer or glass.

7611 (UCRL-JC-107037) **Effect of Lamp-coating mineral deposits on UV-oxidation of ground water.** Camp, D.W. Lawrence Livermore National Lab., CA (United States). Nov 1991. 11p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-920221-1: 2. national research and development conference on the control of hazardous materials, San Francisco, CA (United States), 4-6 Feb 1992). Order Number DE92003968. Source: OSTI; NTIS; GPO Dep.

Ultraviolet (UV)-oxidation is a rapidly emerging technology for treating contaminated ground water in pump and treat remediation schemes. A UV-oxidation system adds hydrogen peroxide (and/or ozone) to the water and shines intense UV light through it to produce hydroxide radicals which oxidize the UV-destabilized organics. A common and costly problem in field applications of this technology is the buildup of UV-absorbing deposits on the quartz tubes that shield the lamps. In a 50-gallons/minute (gpm) treatment unit at Lawrence Livermore National Laboratory (LLNL), we observed dramatic deterioration of performance associated with the buildup of an iron-rich coating in 1 to 2 weeks of operation with very low-iron water. To investigate the connection between deposit growth and diminished performance, we measured the transmissivity spectra of quartz tubes removed from the reactor, the deposit thickness and composition, and the reactor destruction efficiency. This paper reports primarily on the effect of deposit growth on UV absorption, and the effect of this on reactor performance. It touches secondarily on deposit chemistry and options for managing the deposit problem.

7612 (UCRL-JC-108155) **Electrical resistance tomography to monitor vadose water movement.** Ramirez, A. (Lawrence Livermore National Lab., CA (United States)); Daily, W.; LaBrecque, D. Lawrence Livermore National Lab., CA (United States). Sep 1991. 9p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-48. (CONF-910981-44: Environmental remediation '91 conference, Pasco, WA (United States), 8-11 Sep 1991). Order Number DE92003064. Source: OSTI; NTIS; GPO Dep.

We report results of one test in which Electrical Resistance Tomography (ERT) was used to map the changes in electrical resistivity in the vadose zone as a function of time while water infiltration occurred. The ERT images were used to infer shape and movement of the infiltration plume in the unsaturated soil. We supplied a continuous water source at a point about 10 feet below the surface (at the end of a shallow screened hole) for only a short time – 2.5 hours. This pulsed source introduced a "slug" of water whose infiltration was followed to about 60 foot depth during a 23 hour period. The ERT images show resistivity decreases as the water content of the vadose zone increased while water was added to the soil; the resistivity of the soil later increased after the supply of water was cut-off and the induced soil moisture began to subside.

7613 (WHC-EP-0489) **Hanford Site surface soil radioactive contamination control plan for fiscal year 1992.** Winship, R.A.; Hughes, M.C. Westinghouse Hanford Co., Richland, WA (United States). Nov 1991. 113p. Sponsored by U.S. DOE Office of Environmental Restoration and Waste Management. DOE Contract AC06-87RL10930. Order Number DE92004542. Source: OSTI; NTIS; INIS; GPO Dep.

The Surplus Facilities and Resource Conservation and Recovery Act of 1976 (RCRA) closures program is responsible to the US Department of Energy Field Office, Richland, for the safe and cost-effective surveillance, maintenance, and decommissioning of surplus facilities and RCRA closures at the Hanford Site. This program is also responsible for the Radiation Area Remedial Action (RARA) work that includes the surveillance, maintenance, decontamination, and/or interim stabilization of inactive burial grounds, cribs, ponds, trenches, and unplanned release sites. This plan addresses only the RARA activity requirements for managing and controlling the contaminated surface soil areas associated with these inactive sites until they are remediated as part of the Hanford Site environmental restoration process. All known RARA and non-RARA contaminated surface soil areas are listed in this document so that a complete list of the sites requiring remediation is in one document. Specific organizational responsibility for management and control of these sites is shown in Appendix A.

7614 (CONF-911049–5) **The separation of particulates from supercritical water oxidation processes.** Dell'Orco, P.C.; Li, L.; Gloyna, E.F. Texas Univ., Austin, TX (United States). [1991]. 18p. Sponsored by U.S. DOE Office of Environmental Restoration and Waste Management. DOE Contract AC05-76OR00033. From 7. symposium on separation science and technology for energy applications; Knoxville, TN (United States); 20-24 Oct 1991. Order Number DE92004763. Source: OSTI; NTIS; GPO Dep.

Small hydrocyclones with batch underflow receivers were assessed for their ability to separate micron-sized particulates from near-critical water solutions. Such particulates are expected from the effluent of a supercritical water oxidation reactor. The separation of micron-sized quartz silica, zirconia, and titania particles was investigated. A model was developed for the prediction of gross removal efficiencies as a function of a Stokes' number. Particle size distributions provided grade efficiencies for all experiments, and from these data, cut sizes were determined. Gross efficiencies up to 99% were observed for zirconia; cut sizes (d_{90} and d_{95}) near one micron were measured. 19 refs., 5 figs.

7615 (DOE/OR/21548–224) **Quarry detection monitoring wells completion report WP-166: Weldon Spring Site Remedial Action Project, Weldon Spring, Missouri.** MK-Ferguson Co., St. Charles, MO (United States); Jacobs Engineering Group, Inc., St. Charles, MO (United States). Sep 1991. 51p. Sponsored by U.S. DOE Nuclear Energy. DOE Contract AC05-86OR21548. Order Number DE92001946. Source: OSTI; NTIS; INIS; GPO Dep.

The purpose of this report is to document the activities undertaken during implementation of Work Package 166, Quarry Detection Monitoring Wells, for the Weldon Spring Site Remedial action project, Weldon Spring, Missouri. The subcontract specifications should be consulted for specific details regarding this work effort. Analytical parameters for soil samples collected for all but one borehole were analyzed for uranium, thorium, cyanide, nitroaromatics, and all Hazardous Substance List parameters including volatiles, semivolatiles, pesticides, polychlorinated biphenyls (PCBs) and metals. No soil samples were collected at other borehole as per specifications. With Z exceptions, uranium results for all boreholes sampled were at background levels. Nitroaromatics and cyanide were not detected in any of the samples collected. Volatile and semivolatile organics were not detected in the soil samples collected from the boreholes, with the exception of common lab contaminants such as methylene chloride, toluene, acetone, and pathalates. All metals results were either within their natural background ranges or below the detection limit of the instrument. PCB's were not detected within any of the boreholes. Pesticides detected (aldrin and methoxychlor) at one borehole near the surface may be attributed to previous spraying of pesticides on the highway right-of-way. In conclusion, the analytical results show that only uranium was detected in significant quantities; all other results were below the detection limit, very near the detection limit, or within natural background ranges. 1 fig.

7616 (DOE/RL–91-44) **Description of codes and models to be used in risk assessment.** USDOE Richland Operations Office, WA (United States). Sep 1991. 24p. Sponsored by U.S. DOE Environment Safety & Health. Order Number DE92002916. Source: OSTI; NTIS; INIS; GPO Dep.

Human health and environmental risk assessments will be performed as part of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA) remedial investigation/feasibility study (RI/FS) activities at the Hanford Site. Analytical and computer encoded numerical models are commonly used during both the remedial investigation (RI) and feasibility study (FS) to predict or estimate the concentration of contaminants at the point of exposure to humans and/or the environment. This document has been prepared to identify the computer codes that will be used in support of RI/FS human health and environmental risk assessments at the Hanford Site. In addition to the CERCLA RI/FS process, it is recommended that these computer codes be used when fate and transport analyses is required for other activities. Additional computer codes may be used for other purposes (e.g., design of tracer tests, location of observation wells, etc.). This document provides guidance for unit managers in charge of RI/FS activities. Use of the same computer codes for all analytical activities at the Hanford Site will promote consistency, reduce the effort required to develop, validate, and implement models to simulate Hanford Site conditions, and expedite regulatory review. The discussion provides a description of how models will likely be developed and utilized at the Hanford Site. It is intended to summarize previous environmental-related modeling at the Hanford Site and provide background for future model development. The modeling capabilities that are desirable for the Hanford Site and the codes that were evaluated. The recommendations include the codes proposed to support future risk assessment modeling at the Hanford Site, and provides the rational for the codes selected. 27 refs., 3 figs., 1 tab.

Radiochemistry Group). Department of Atomic Energy, Bombay (India). Board of Research in Nuclear Sciences. Feb 1991. 685p. (CONF-9102132–: International symposium on radiochemistry and radiation chemistry - plutonium 50, Bombay (India), 4-7 Feb 1991). In *International symposium on radiochemistry and radiation chemistry (Plutonium - 50 years) (held at Bombay during February 4-7, 1991): Preprints volume.* Order Number DE92001334. Source: OSTI; NTIS (US Sales Only); INIS.

The aim of this paper is to discuss the behaviour of Pu in environmental-like situations. This is an illustration of the concepts of subtracer chemistry because most of the nuclear and chemical properties of Pu isotopes fit well the criterias required for observable reactions. The predicted behaviour of Pu quantities, down to few atoms, based on the situation known for usual concentrations is discussed. First, a short survey of Pu concentrations in environmental situations is given. Then the most probable equilibria of Pu species to be achieved, now or in a far future are selected. Finally how these equilibria are modified in the case of few Pu atoms is examined. (author). 50 refs., 4 tabs., 6 figs.

7619 (INIS-mf–13087) **Summary report on the radiation environment of the Danube river within 1977-1980 period.** ORB. Obespechenie Radiatsionnoj Bezopasnosti. Petkov, T.; Novakova, E.; Kerteva, A.; Mireva, Z.; Bodulin, V.; Borisova, Yu.; Stepanova, V.D.; Pavlovskij, O.A. Sovet Ehkonomicheskoj Vzaimopomoshchi, Moscow (USSR). Postoyannaya Komissiya po Ispol'zovaniyu Atomnoj Ehnergii v Mirnykh Tselyakh. 1983 39p. (In Russian). Order Number DE92614884. Source: OSTI; NTIS (US Sales Only); INIS. 7 refs.; 18 tabs.

The radiation environment of the Danube river has been studied from Bratislava city down to river mouth that is within the distance of 1869 km. Systematic measurements were carried out at 22 points in the territories of the USSR, Roumania, Bulgaria, Hungary and Czechoslovakia. Samples of water, sediments and aquatic organisms were used to determine such radionuclides as natural uranium, radium-226, potassium-40, tritium, strontium-90, cesium-137. In general the radiation environment of the Danube river can be considered as a function of the natural radionuclides presence and artificial radionuclides global fallout. No specific radionuclides from other sources were observed. Thus a conclusion can be drawn that the presence of operating Nuclear Power Plants in the Danube vally has no negative effects on its radiation environment. Measurements data of radionuclide concentrations are given. 7 refs.; 18 tabs.

7620 (INIS-mf–13088) **Investigations of Baltic See radioactivity within 1976-1980.** ORB. Obespechenie Radiatsionnoj Bezopasnosti. Weiss, D.; Lyonnig, M.; Tille, J.; Gzhibovska, D.; Tomchak, Ya.; Gedeonov, L.I.; Gusev, D.I.; Ivanova, L.M.; Pavlovskij, O.A.; Stepanova, V.D. Sovet Ehkonomicheskoj Vzaimopomoshchi, Moscow (USSR). Postoyannaya Komissiya po Ispol'zovaniyu Atomnoj Ehnergii v Mirnykh Tselyakh. 1983 87p. (In Russian). Order Number DE92614885. Source: OSTI; NTIS (US Sales Only); INIS.

The report presents summary of data on the Baltic Sea radioactive contamination obtained in DDR, PPR and the USSR within 1976-1980. The seawater, sediments and aquatic plants and animals were investigated. The distribution of strontium-90 and cesium-137 isotopes is given both for the open sea and its gulfs. Tendency towards strontium-90 concentration decrease is noted though cesium-137 concentration rise was observed in 1980 due to radioactive and polluted water ingress from the Northern Sea. In a number of points, except western regions in the vicinity of the Northern Sea, uniform distributions of strontium-90 and cesium-137 concentations versus depth were established. The radionuclide contents in water, sediments and aquatic organisms of Greifswald and Finland gulfs where Nuclear Power Plants are located on the seashore were found to be the same as in the open sea. The dependence of strontium-90 and especially cesium-137 sorption on the sediments composition has been noticed. In 1980 DDR presented data on tritium content in both near-surface and deep waters. Poland has carried out the first investigations of plutonium-239 and 240 content in the sediments. The dynamic behaviour of strontium-90 and cesium-137 concentrations in the Baltic Sea water within 1959-1980 has been reviewed. Data on strontium-90 and cesium-137 content in fishes and plants are given. On this basis the dose commitmments for population were estimated. 19 refs.; 27 tabs.; 6 figs.

7621 (INIS-mf–13089) **Summary report on the Danube river radiation environment within 1981-1985.** ORB. Obespechenie Radiatsionnoj Bezopasnosti. Sovet Ehkonomicheskoj Vzaimopomoshchi, Moscow (USSR). Postoyannaya Komissiya po Ispol'zovaniyu Atomnoj Ehnergii v Mirnykh Tselyakh. 1987 31p. (In Russian). Order Number DE92614886. Source: OSTI; NTIS (US Sales Only); INIS.

Radiation environment of the Danube river from Bratislava city (Czechoslovakia) down to the river mouth was investigated systematically within 1981 to 1985. This report summarizes the data obtained in CMEA member-countries who participated in this work: Czechoslovakia, Hungary, Roumania, Bulgaria and the USSR. The samples for radioactivity measurements were taken at 21 points over 1869 km distance. Mainly the samples of the river water and sediments have been studied with measuring total alpha- and beta-activity and identifying such nuclides as natural uranium, radium-226, potassium-40, tritium, strontium-90 and cesium-137. The measurements data are presented. In general the radiation environment of the Danube river is considered as favorable, it does not differ from the state observed in previous time periods. No contribution by Nuclear Power Plants to the Danube river radioactivity has been revealed. The evaluated dose commitments for critical groups of population are four orders of magnitude lower than those from the natural radiation sources. 20 tabs.

7622 (INIS-mf–13090) **Baltic Sea radioactivity studies within 1981-1985.** ORB. Obespechenie Radiatsionnoj Bezopasnosti. Sovet Ehkonomicheskoj Vzaimopomoshchi, Moscow (USSR). Postoyannaya Komissiya po Ispol'zovaniyu Atomnoj Ehnergii v Mirnykh Tselyakh. 1987 97p. (In Russian). Order Number DE92614887. Source: OSTI; NTIS (US Sales Only); INIS.

The report summarizes the results of the Baltic Sea radioactivity studies within 1981-1985 carried out by CMEA member-countries: DDR, PPR and the USSR. These studies were related to the impact from a number of Nuclear Power Plants located at the Baltic seashore. The distribution of strontium-90, cesium-137 and tritium concentrations across the Baltic Sea aquatory has been studied both in near-surface and deep water layers. The statistical analysis of the obtained data has revealed their normal distribution. The radionuclide contents were measured both in edible and non-edible parts of fishes and dose commitments due to internal irradiation related to the fish eating calculated for critical group as well as for general population. Both the found volumetric activities and evaluated dose commitments are 3-4 orders of magnitude lower than the permissible levels established by the regulations used in DDR, PPR and the USSR. The summarized statistical data and calculation results are presented in tables and graphics. Wide experience in the sea radioactivity studies has been acquired. 12 refs.; 22 tabs.; 15 figs.

7623 (KAERI/RR–962/90) **Environmental isotope aided studies on water resources in the region of Cheju (VII).** Ahn, Jong Sung (Korea Atomic Energy Research Inst., Daeduk (Korea, Republic of)); Kim, Jhin Wung; Kim, Sun Joon; Kim, Jin Se; Yoo, Jang Keol; Song, Sung Joon. Korea Atomic Energy Research Inst., Daeduk (Korea, Republic of). Jan 1991. 66p. (In Korean). Order Number DE92614889. Source: OSTI; NTIS (US Sales Only); INIS.

Cheju island formed by Quarternary volcanism has highly permeable hydrogeological environment. To meet the increasing demand of water in the island, many groundwater wells have been developed. The environmental isotopes (oxygen-18, deuterium, tritium) study and chemical analysis on water samples from the eastern part of the island were carried out to ascertain whether groundwater in the eastern part of the island was contaminated by sea water. The result of tritium analysis indicated fast infiltration of meteoric water into underground and rapid mixing process between rain water and groundwater. The results of oxygen-18 and deuterium analysis demonstrated that most of the wells in the eastern part of the island were influenced by sea water intrusion. Based on chemical analysis of water samples most of groundwater in study area were classified into Na-Cl type and showed high chloride/bicarbonate ratios. Sea water intrusion in the northeastern part of the island has proceeded to inward island at least 3 km from the coastal line, and in the southeastern part about 700 m. (Author).

7624 (MAFF-AEMR–19) **Radioactivity in surface and coastal waters of the British Isles, 1987.** Hunt, G.J. Ministry of Agriculture, Fisheries and Food, Lowestoft (United Kingdom). Directorate of Fisheries Research. 1988. 67p. Order Number DE92614891. Source: OSTI; NTIS (US Sales Only); INIS.

This report presents the results of the environmental monitoring programme carried out during 1987 by staff of the Directorate of Fisheries Research, Lowestoft. The monitoring programme supports the Ministry's functions under the Radioactive Substances Act, 1960 (Great Britain-Parliament, 1960). The programme is set up to verify the satisfactory control of liquid radioactive waste discharges to the aquatic environment, and to ensure that the resulting public radiation exposure is within nationally-accepted limits. The monitoring is independent of similar programmes carried out by nuclear site operators as a condition of their authorisations to discharge radioactive wastes. This report also includes results of monitoring carried out on behalf of departments of the Scottish Office, the Welsh Office, the Department of the Environment for Northern Ireland [DOE (NI)] and the Channel Islands States. Where appropriate, the information presented is supplemented by results from our extensive programme of research into the behaviour of radioactivity in the aquatic environment. (author).

7625 (NEI-SE–90) **A costal dispersion model.** Rahm, L.; Nyberg, L.; Gidhagen, L. Sveriges Meteorologiska och Hydrologiska Inst., Norrkoeping (Sweden). [1990]. 10p. (In Swedish). Order Number DE92613509. Source: OSTI; NTIS (US Sales Only); INIS.

A dispersion model to be used off costal waters has been developed. The model has been applied to describe the migration of radionuclides in the Baltic sea. A summary of the results is presented here. (K.A.E).

7626 (ORNL/ER–46) **Final report on the waste area grouping perimeter groundwater quality monitoring well installation program at Oak Ridge National Laboratory, Oak Ridge, Tennessee.** Greene, J.A. Oak Ridge National Lab., TN (United States). Jun 1991. 72p. Sponsored by U.S. DOE Office of Environmental Restoration and Waste Management. DOE Contract AC05-84OR21400. Order Number DE92002379. Source: OSTI; NTIS; INIS; GPO Dep.

A groundwater quality monitoring well installation program was conducted at Oak Ridge National Laboratory (ORNL) to meet the requirements of environmental regulations, including the Resource Conservation and Recovery Act (RCRA) and the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). A total of 173 wells were installed and developed at 11 different waste area groupings (WAGs) between June 1986 and November 1990. A location map of the wells is included.

7627 (ORNL/M-1809) **Functional requirements for Waste Area Grouping 6 Monitoring Station 3 upgrade.** Fiuzat, A.A. (Environmental Consulting Engineers, Inc., Knoxville, TN (United States)). Oak Ridge National Lab., TN (United States); Environmental Consulting Engineers, Inc., Knoxville, TN (United States). Jun 1991. 39p. Sponsored by U.S. DOE Office of Environmental Restoration and Waste Management. DOE Contract AC05-84OR21400. (X-OE-552). Order Number DE92003550. Source: OSTI; NTIS; INIS; GPO Dep.

The surface Waste Area Grouping (WAG)6 at ORNL may undergo many changes in the future as part of the closure activities. Changes in surface characteristics will cause changes in runoff characteristics of the MS 3 watershed. Appropriate assumptions are to be made in this project regarding the future surface conditions of the watershed. The extent to which the assumed surface conditions will affect the project objectives (defined in Section 1.0) is to be identified. The purpose of this FRD is to establish performance requirements for MS 3 consisting of the following: (1) The expected range of discharges passing through the station and the required accuracy levels for discharge measurements. (2) The equipment required to measure the expected discharges at the required accuracy levels. (3) The sampling requirements for monitoring water quality. (4) The hydraulic requirements for the discharge conveyance structure to be located under the IWMF access road. (5) The design loads to be used for the bridge over the IWMF access road. 12 refs., 5 figs.

7628 (ORNL/TM-11886) **Preliminary site characterization summary and engineering evaluation/cost analysis for Site 2, New Fuel Farm, Naval Air Station Fallon, Fallon, Nevada.** Cronk, T.A. (Oak Ridge National Lab., TN (United States)); Smuin, D.R.; Schlosser, R.M. Oak Ridge National Lab., TN (United States). Sep 1991. 81p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE92004598. Source: OSTI; NTIS; GPO Dep.

This report addresses subsurface contamination associated with Site 2, the New Fuel Farm at Naval Air Station Fallon (NAS Fallon), Nevada and is an integral part of Phase 2 of the Installation Restoration Program (IR Program) currently underway at the facility. This report: (1) reviews and assesses environmental information characterizing Site 2; (2) determine if site-characterization information is sufficient to design and evaluate removal actions; and, (3) investigates, develops, and describes any removal actions deemed feasible. Previous environmental investigations at Site 2 indicate the presence of floating product (primarily JP-5, jet fuel) on the water table underlying the facility. While the extent of floating-produce plumes has been characterized, the degree of associated soil and groundwater contamination remains uncertain. A comprehensive characterization of soil and groundwater contamination will be completed as the Remedial Investigation/Feasibility Study progresses. Corrective actions are recommended at this time to remove free-phase floating product. Implementing these removal actions will also provide additional information which will be used to direct further investigations of the extent, mobility, and potential environmental threat from soil and groundwater contaminants at this side.

7629 (PNL-7836) **External quality control in ground-water sampling and analysis at the Hanford Site.** Hall, S.H.; Juracich, S.P. Pacific Northwest Lab., Richland, WA (United States). Nov 1991. 44p. Sponsored by U.S. DOE Office of Environmental Restoration and Waste Management. DOE Contract AC06-76RL01830. Order Number DE92004452. Source: OSTI; NTIS; INIS; GPO Dep.

At the US Department of Energy's Hanford Site, external Quality Control (QC) for ground-water monitoring is extensive and has included routine submittal of intra- and interlaboratory duplicate samples, blind samples, and several kinds of blank samples. Examination of the resulting QC data for nine of the constituents found in ground water at the Hanford Site shows that the quality of analysis has generally been within the expectations of precision and accuracy that have been established by the US Environmental Protection Agency (EPA). The constituents subjected to review were nitrate, chromium, sodium, fluoride, carbon tetrachloride, tritium, ammonium, trichloroethylene, and cyanide. Of these, the fluoride measurements were notable exceptions and were poor by EPA standards. The review has shown that interlaboratory analysis of duplicate samples yields the most useful QC data for evaluating laboratory performance in determining commonly encountered constituents. For rarely encountered constituents, interlaboratory comparisons may be augmented with blind samples (synthetic samples of known composition). Intralaboratory comparisons, blanks, and spikes should be generally restricted to studies of suspected or known sample contamination and to studies of the adequacy of sampling and analytical procedures.

7630 (PNL-7869-HEDR) **References for radioactive releases to the Columbia River from Hanford Operations, 1944-1957: Letter report: Hanford Environmental Dose Reconstruction Project.** Hall, R.B. Pacific Northwest Lab., Richland, WA (United States). Nov 1991. 27p. Sponsored by U.S. DOE Defense Programs. DOE Contract AC06-76RL01830. Order Number DE92003984. Source: OSTI; NTIS; INIS; GPO Dep.

A search was made for published documents related to discharges of radioactive material from Hanford Site facilities to the Columbia River from 1944-1957. The purpose was to list documents that contain data that might be useful in developing a source term for waterborne releases. Source term development work will take place in FY 1992, and FY 1993. This tabulation of published summaries of release data shows the type of measurements that were being made from 1944-1957 and the magnitude of discharges to the Columbia River. In the early years, very little data were collected that related to specific radionuclides. However, most of the key radionuclides were known to be present in effluents from occasional specific radionuclide analyses.

7631 (PNL-7876) **Episodic response project: Wet deposition at watersheds in three regions of the eastern United States.** Barchet, W.R. Pacific Northwest Lab., Richland, WA (United States). Nov 1991. 200p. Sponsored by Environmental Protection Agency. DOE Contract AC06-76RL01830. Order Number DE92004709. Source: OSTI; NTIS; INIS; GPO Dep.

During the period from August 1988 to June 1990, wet-only sampling of precipitation was carried out at three Episodic Response Project sites and at one supplemental site. The three watershed sites are Moss Lake, Biscuit Brook, and Linn Run. The supplemental site was the MAP3S site at Pennsylvania State University that characterizes the central group of northern Appalachian streams. The site operators adhered by varying degrees to the sample collection protocol based on the daily sampling protocol of the MAP3S Precipitation Chemistry Network. Sulfate and nitrate ion together accounted for more than 80% of total anions (in μEq/L) in the precipitation at all sites. Wet deposition of sulfate at Moss Lake, Biscuit Brook, Penn State, and Linn Run averaged 223, 230, 253, and 402 mg/m^2/month, respectively, whereas nitrate wet deposition averaged 197, 195, 160, and 233 mg/m^2/month, respectively. Sulfate deposition was a factor of 2 to 4 higher in summer than in winter. The seasonal pattern for nitrate deposition was weak; the seasonal contrast was less than a factor of 2.5 at all sites. The association between the wet deposition and precipitation chemistry at the MAP3S monitoring site and the average for the study watersheds was dependent on the distance between the site and watershed and the intervening terrain. Precipitation chemistry at the monitoring site is representative of that at the ERP study watersheds in the Adirondack and Catskill regions and in the south-western group of watersheds in the Appalachian region. High spatial variability in precipitation amounts makes this assumption weaker for wet deposition. Chemical input to watersheds from dry deposition has not been determined at any site but could range from a factor of 0.3 to 1.0 of the wet deposition. 7 refs., 38 figs., 12 tabs.

7632 (SKB-TR-90-15) **Chemical and isotopic composition of groundwaters and their seasonal variability at the OSAMU**

Utsumi mine and Morro do Ferro analogue study sites, Pocos de Caldas, Brazil: Pocos do Caldas Report No. 6. Nordstrom, D.K. (U.S. Geological Survey, Menlo Park, CA (United States)); Smellie, J.A.T.; Wolf, M. Brazil; SKB(SE); NAGRA(CH); DOE(GB); DOE(US) collaboration. Swedish Nuclear Fuel and Waste Management Co., Stockholm (Sweden). 1990. 122p. Order Number DE92613512. Source: OSTI; NTIS (US Sales Only); INIS.

Groundwaters and a few surface waters were collected over a period of 3 years from two natural analogue sites near Pocos de Caldas, Brazil: the Osamu Utsumi uranium mine and the Morro do Ferro thorium/rare-earth deposit. These were analysed for major constituents, several trace elements, tritium, deuterium and ^{18}O, to provide hydrochemical data for the modelling objectives as defined within the natural analogue study programme. The groundwaters are K-Fe-SO_4 type, which classifies them as a highly unusual composition related to the weathering of a hydrothermally altered, mineralised complex of volcanic to sub-volcanic phonolites. A subset of selected constituents (Fe(II), Fe(total), SO_4, pH, Eh, alkalinity, F and U) was monitored to gain detailed information on the seasonal variability. Seasonal patterns were only apparent from the very shallow groundwater data, but a trend of continuously increasing dissolved solids for the furthest down-gradient sampling point in deep groundwater indicates a growing plume of water affected by pyrite oxidation but without the residual acidity. Tritium and stable isotope measurements indicate that all groundwaters are of meteoric origin and are not affected significantly by evaporation or by water-rock interactions. Recharging groundwaters at both study site demonstrate infiltration of water of less than about 35 years in age, whereas deep groundwaters are below 1 TU (tritium unit) but still contain detectable tritium in most cases. These deeper groundwaters may be interpreted as being 35-60 or more years in age, resulting mainly from an admixture of younger with older groundwaters and/or indicating the influence of subsurface-produced tritium. (au).

7633 (DOE/ER/60437–6) **Electron microscope studies: Progress report, 1 July 1990–1 June 1991.** Crewe, A.V.; Kapp, O.H. Chicago Univ., IL (United States). 1 Jun 1991. 141p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-86ER60437. Order Number DE92004693. Source: OSTI; NTIS; INIS; GPO Dep.

This year our laboratory has continued to make progress in the design of electron-optical systems, in the study of structure-function relationships of large multi-subunit proteins, in the development of new image processing software and in achieving a workable subangstrom STEM. We present an algebraic approach to the symmetrical Einzel (unipotential) lens wherein we simplify the analysis by specifying a field shape that meets some preferred set of boundary or other conditions and then calculate the fields. In a second study we generalize this approach to study of three element electrostatic lenses of which the symmetrical Einzel lens is a particular form. The purpose is to develop a method for assisting in the design of a lens for a particular purpose. In our biological work we study a stable and functional dodecameric complex of globin chains from the hemoglobin of Lumbricus terrestris. This is a complex lacking the "linker" subunit first imaged in this lab and required for maintenance of the native structure. In addition, we do a complete work-up on the hemoglobin of the marine polychaete Eudistylia vancouverii demonstrating the presence of a hierarchy of globin complexes. We demonstrate stable field-emission in the sub-angstrom STEM and the preliminary alignment of the beam. We continue our exploration of a algorithms for alignment of sequences of protein and DNA. Our computer facilities now include four second generation RISC workstations and we continue to take increasing advantage of the floating-point and graphical performance of these devices.

7634 (ANL–91/29) **Automated insertion of sequences into a ribosomal RNA alignment: An application of computational linguistics in molecular biology.** Taylor, R.C. Argonne National Lab., IL (United States). Nov 1991. 101p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. Order Number DE92004954. Source: OSTI; NTIS; GPO Dep.

Thesis submitted to Case Western Reserve University, Cleveland, OH.

This thesis involved the construction of (1) a grammar that incorporates knowledge on base invariancy and secondary structure in a molecule and (2) a parser engine that uses the grammar to position bases into the structural subunits of the molecule. These concepts were combined with a novel pinning technique to form a tool that semi-automates insertion of a new species into the alignment for the 16S rRNA molecule (a component of the ribosome) maintained by Dr. Carl Woese's group at the University of Illinois at Urbana. The tool was tested on species extracted from the alignment and on a group of entirely new species. The results were very encouraging, and the tool should be substantial aid to the curators of the 16S alignment. The construction of the grammar was itself automated, allowing application of the tool to alignments for other molecules. The logic programming language Prolog was used to construct all programs involved. The computational linguistics approach used here was found to be a useful way to attach the problem of insertion into an alignment.

7635 (ANL/CP–74444) **Polymerization of immunoglobulin domains: A model system for the development of facilitated macromolecular assembly.** Stevens, F.J.; Myatt, E.A. Argonne National Lab., IL (United States). [1991]. 27p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. (CONF-9111148–1: 2. foresight conference on molecular nanotechnology, Palo Alto, CA (United States), 7-9 Nov 1991). Order Number DE92004723. Source: OSTI; NTIS; GPO Dep.

We have recently determined that monoclonal immunoglobulin light chains (Bence Jones proteins) are capable of reversible polymerization at room temperature. This property, as exhibited by immunoglobulin light chains (normally a component of an intact antibody molecule), may have novel implications for the development of "molecular nanotechnology." The polymerization capability of the immunoglobulin light chain is associated with the so-called variable domain of this molecule. The variable domain is a durable, compact beta-sheet structure of molecular weight approximately 12,000. Most of the primary sequence variation is limited to one portion of the molecule, that portion associated with the contribution of immunoglobulin light chains to the recognition and binding of thousand of different antigens by antibodies. As a consequence of these variations, different light chains polymerize with different degrees of avidity, from negligible to extensive. The polymerization process depends on solution parameters such as Ph. Thus, polymerization might be induced at one pH and suppressed or reversed at another. Combinations of molecules of appropriate specificities could assemble into structures of predetermined three-dimensional forms and properties. These features suggest that Bence Jones proteins represent a powerful model system within which to develop empirical rules relevant to a technology of protein-based "construction". Development of these rules will require the combined efforts of biophysical and crystallographic studies, protein engineering, and molecular modeling. 53 refs., 5 figs.

7636 (CONF-920330–1) **GRAIL: An integrated artificial intelligence system for gene recognition and interpretation.** Guan, X.; Mann, R.C.; Einstein, J.R.; Mural, R.J.; Uberbacher, E.C. Oak Ridge National Lab., TN (United States). [1991]. 3p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From 8. IEEE conference on artificial intelligence for applications; Monterey, CA (United States); 2-6 Mar 1992. Order Number DE91018850. Source: OSTI; NTIS; GPO Dep.

This paper describes the development of an integrated Artificial Intelligence system GRAIL (Gene Recognition and Analysis Internet Link). This system uses a combination of multiple sensor neural network, expert system, and parallel search tools to recognize and interpret genes in DNA sequences. A simple electronic mail (E-mail) interface makes the system accessible through Internet. The strength of our system in recognizing and interpreting genes in DNA sequences and the simple E-mail interface have already attracted more than 30 users. The successful integration of neural network, expert system and highly parallel search tools to solve such a complicated problem as gene interpretation indicates that the technology itself is likely to have many applications in solving other problems. 6 refs.

7637 (DOE/ER/60406–T5) **[Structure and stability of nucleic acids]: Progress report, July 1, 1988–June 30, 1991.** Tinoco, I. Jr. California Univ., Berkeley, CA (United States). [1991]. 16p. Sponsored by U.S. DOE Energy Research. DOE Contract FG03-86ER60406. Order Number DE92003461. Source: OSTI; NTIS; GPO Dep.

We study the conformations of DNA and RNA oligonucleotides in order to understand their biological roles. We have determined the structure of the most common type of hairpin loop found in ribosomal RNA–the extra-stable tetraloop. It is actually a biloop with the other two bases in the loop forming a non-Watson-Crick base pair. This is the highest resolution structure reported for an RNA molecule in solution so far. We have obtained structures of pseudoknots and we have deduced general rules for their formation. We are presently studying a pseudoknot which is necessary for the replication of a retrovirus. The research done in the laboratory has been reported in 24 publications, plus 7 manuscripts in press or submitted. The research was done by 14 graduate students and 7 postdoctoral fellows. Five graduate students have received their Ph.D.s and 4 postdoctorals have finished their stay here. There are presently 9 graduate students and 3 postdoctorals working on the project; 2 new postdoctorals are expected this summer. One undergraduate student usually participates in the research during the year; this summer two undergraduates are working on the project. 31 refs., 4 figs.

7638 (LA-UR–91-3715) **HIV-1 intrapatient sequence diversity in the immunogenic V3 region.** Korber, B. (Los Alamos National Lab., NM (United States)); Myers, G.; Wolinsky, S.; Kunstman, K.; Levy, R.; Furtado, M.; Otto, P.; Haynes, B. Los Alamos National Lab., NM (United States). 12 Nov 1991. 15p. Sponsored by U.S. Department of Health and Human Services. DOE Contract W-7405-ENG-36. (CONF-9110295–1: Advances in aids vaccine development, Marcos Island, FL (United States), 15-19 Oct 1991). Order Number DE92003782. Source: OSTI; NTIS; GPO Dep.

The third hypervariable domain (V3) of the human immunodeficiency virus type-1 (HIV-1) envelope protein (env) can serve as an epitope for potent type-specific neutralizing antibodies (NAbs) – thus short peptides predicted on the most commonly found variants of the antigenic tip of the V3 loop have been considered as potential candidates for an HIV peptide vaccine. To evaluate the extent of intrapatient variation in the immunogenic crest of the V3 loop, sequence sets were analyzed from individuals for whom multiple V3 sequences were available. Several strategies for selecting the best sets of hexapeptides to represent the variable tip of the V3 loop were considered and their effectiveness was evaluated by comparing them with the sequence sets from individuals. Most individuals carried at least one, and frequently many, variants that did not match any of the sequences from among the ten most common hexapeptides. Intrapatient viral sequence variation was increased by including sequences derived from brain biopsy specimens as well as from blood. Additionally, sequences obtained from brain specimens of different individuals had common elements which were not conserved in the corresponding blood samples, suggesting that certain amino acids in the V3 loop may be requisite for viral propagation in the CNS.

7639 (LA-UR–91-3716) **Analyses of inter- and intra-patient variation in the V3 loop of the HIV-1 envelope protein.** Korber, B. (Los Alamos National Lab., NM (United States)); Myers, G.; Wolinsky, S. Los Alamos National Lab., NM (United States). 17 Sep 1991. 16p. Sponsored by U.S. Department of Health and Human Services. DOE Contract W-7405-ENG-36. (CONF-9109315–1: Vaccines '92, Cold Spring Harbor, NY (United States), 19-23 Sep 1991). Order Number DE92003781. Source: OSTI; NTIS; GPO Dep.

The third hypervariable domain of the HIV-1 gp120 envelope protein (V3) has been the focus of intensive sequencing efforts. To date, nearly one thousand V3 loop sequences have been stored in the HIV sequence database. Studies have revealed that the V3 loop elicits potent type-specific immune responses, and that it plays a significant role in cell tropism and fusion . The immunogenic tip of the loop can serve as a type-specific neutralizing antibody epitope, as well as a cytotoxic T-cell epitope. A helper T-cell epitope that lies within the amino terminal half of the V3 loop has also been characterized. Despite the richness of the immunologic response to this region, its potential for variation makes it an elusive target for vaccine design. Analyses of sibling sequence sets (sets of viral sequences derived from one person) show that multiple forms of the immunogenic tip of the loop are found within most HIV-1 infected individuals. Viral V3 sequences obtained from epidemiologically unlinked individuals from North America and Europe show extensive variation. However, some amino acid positions distributed throughout the V3 loop are highly conserved, and there is also conservation of the charge class of amino acid able to occupy certain positions relative to the tip of the loop. By contrast, the sequences obtained from many countries throughout the African continent reveal that V3 is a remarkably fluid region with few absolute constraints on the nature of the amino acids that can occupy most positions in the loop. The high degree of heterogeneity in this region is particularly striking in view of its contribution to biologically important viral functions.

7640 **Improved method for sequencing DNA base pairs.** Sessler, A.M.; Dawson, J. To Dept. of Energy. 1990. Filed date 30 May 1990. USA Patent patent application 7-530,693. 11p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00098. Order Number DE92004622. Source: OSTI; NTIS; GPO Dep.

The base pairs of a DNA structure are sequenced with the use of a scanning tunneling microscope (STM). The DNA structure is scanned by the STM probe tip, and, as it is being scanned, the DNA structure is separately subjected to a sequence of infrared radiation from four different sources, each source being selected to preferentially excite one of the four different bases in the DNA structure. Each particular base being scanned is subjected to such sequence of infrared radiation from the four different sources as that particular base is being scanned. The DNA structure as a whole is separately imaged for each subjection thereof to radiation from one only of each source. 1 ref.

7641 (CONF-9106303–, pp. 59-60) **Genetics of coal biliquefaction by Neurospora crassa.** Mishra, N.C. (Univ. of South Carolina, Columbia (United States)). USDOE Pittsburgh Energy Technology Center, PA (United States). Advanced Power Generation and Fundamental Research Div. Jun 1991. DOE Contract FG22-88PC88936. From University coal research program at historically black colleges and universities; Pittsburgh, PA (United States); 25-27 Jun 1991. In *Abstracts and research accomplishments of university coal research projects.* 207p. Order Number DE92003115. Source: OSTI; NTIS.

The main objectives of this proposal include: (1) isolation faction; (2) identification of coal derived products obtained after biosolubiliation in vitro; (3) selection of Neurospora strain capable of efficient coal liquefaction and biochemical characterization of mutants. A 84 kd protein with Coal Solubilization Activity (CSA) has been identified from the wildtype strain of Neurospora crassa, a filamentous fungus. This progein has been now very well characterized with respect to pH of Coal Solubiliation Activity, molecular weight, amino acid composition and heat stability. The protein has been found to be altered in a Neurospora mutant (ty-1) which is unable to solubilize coal. The mutant protein is altered with respect to its reduced stability, glycosylation pattern and isoelectric point (PI). These findings conclusively establish that Coal Solubilization is genetically controlled and that the above 84 kd Neurospora protein is involved in the Solubilization of Coal. Further study is aimed at determining the mechanism of the action of this 84 kd Neurospora protein.

7642 (DOE/ER/13204-6) **Genetics of thermophilic bacteria: Final progress report, May 1, 1984-April 30, 1991.** Welker, N.E. Northwestern Univ., Evanston, IL (United States). Dept. of Biochemistry, Molecular Biology and Cell Biology. [1991]. 8p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-84ER13204. Order Number DE92004033. Source: OSTI; NTIS; GPO Dep.

Organisms adapted to high temperature have evolved a variety of unique solutions to the biochemical problems imposed by this environment. Adaptation is commonly used to describe the biochemical properties of organisms which have become adapted to their environment (genetic adaptation). It can also mean the direct response-at the cellular level-of an organism to changes in temperature (physiological adaptation). Thermophilic bacilli (strains of Bacillus stearothermophilus) can exhibit a variety of biochemical adaptations in response to changes in temperature. These include changes in the composition and stability of the membrane, metabolic potential, the transport of amino acids, regulatory mechanisms, ribose methylation of tRNA, protein thermostability, and nutritional requirements. The objectives of the research were to develop efficient and reliable genetic systems to analyze and manipulate B. Stearothermophilus, and to use these systems initiate a biochemical, molecular, and genetic investigations of genes that are required for growth at high temperature.

7643 (EGG-10617-2080) **San Joaquin kit fox (Vulpes macrotis mutica) program, Camp Roberts, California: Annual report, Fiscal years 1989-1990.** EG and G Energy Measurements, Inc., Goleta, CA (United States). Santa Barbara Operations. 1 Aug 1991. 46p. Sponsored by U.S. Department of Defense. DOE Contract AC08-88NV10617. Order Number DE92004459. Source: OSTI; NTIS (US Sales Only); GPO Dep.

Military training activities, new construction projects, and routine repair and maintenance activities conducted at Camp Roberts could adversely affect the endangered San Joaquin kit fox (Vulpes macrotis mutica). The Endangered Species Act of 1973 (as amended) states that all Federal agencies ensure that any actions authorized, funded, or carried out by the agency are not likely to have any detrimental effects on endangered species or their habitat. The major objective of the Camp Roberts Environmental Studies Program is to prepare a comprehensive Biological Assessment of the effects of all NGB-authorized activities (includes military training, anticipated construction projects, repair and maintenance activities, and all NGB-authorized non-military activities such as hunting and fishing programs, grazing leases, etc.) on San Joaquin kit fox. The program also provides NGB with the scientific expertise necessary to insure compliance with the Endangered Species Act. The specific objective of this report is to summarize progress and results of the Environmental Studies Program made during Fiscal Years 1989 and 1990 (FY89/90). 32 refs., 9 figs., 14 tabs.

7644 (LA-UR-91-3391) **The royal road for genetic algorithms: Fitness landscapes and GA performance.** Mitchell, M. (Michigan Univ., Ann Arbor, MI (United States)); Holland, J.H.; Forrest, S. Los Alamos National Lab., NM (United States). [1991]. 11p. Sponsored by U.S. DOE Office of Administration and Human Resource Management; Santa Fe Institute; Associated Western Universities. DOE Contract W-7405-ENG-36. (CONF-911266-1: 1. European conference on artificial life, Paris (France), Dec 1991). Order Number DE92002541. Source: OSTI; NTIS; GPO Dep.

Genetic algorithms (GAs) play a major role in many artificial-life systems, but there is often little detailed understanding of why the GA performs as it does, and little theoretical basis on which to characterize the types of fitness landscapes that lead to successful GA performance. In this paper we propose a strategy for addressing these issues. Our strategy consists of defining a set of features of fitness landscapes that are particularly relevant to the GA, and experimentally studying how various configurations of these features affect the GA's performance along a number of dimensions. In this paper we informally describe an initial set of proposed feature classes, describe in detail one such class ("Royal Road" functions), and present some initial experimental results concerning the role of crossover and "building blocks" on landscapes constructed from features of this class. 27 refs., 1 fig., 5 tabs.

7645 (PNL-7600-Pt.1, pp. 109-112) **GnomeView 2: A graphical interface to the human genome.** Douthart, R.J. Pacific Northwest Lab., Richland, WA (United States). Jun 1991. In *Pacific Northwest Laboratory annual report for 1990 to the DOE Office of Energy Research. Part 1, Biomedical sciences.* 151p. Order Number DE91015807. Source: OSTI; NTIS.

GnomeView is a graphical computer interface to the human genome. The central units of information organization are genome maps and DNA sequence. Although GnomeView contains its own Data Base management System (DBMS), it is not a data repository such as GenBank and Genetics Data Base (GDB). GnomeView is guided by user queries, and abstracts information from these databases to draw genomic maps. Currently information is abstracted automatically from GenBank but must be abstracted manually from GDB (Genome Data Base) and other sources of mapping information.

7646 (PNL-7600-Pt.1, pp. 113-115) **Synthesis of human genome information.** Schmaltz, J.E. Pacific Northwest Lab., Richland, WA (United States). Jun 1991. In *Pacific Northwest Laboratory annual report for 1990 to the DOE Office of Energy Research. Part 1, Biomedical sciences.* 151p. Order Number DE91015807. Source: OSTI; NTIS.

Computer science expertise was provided to the Human Genome Task Group by an OHER detailee. The Human Genome community uses the term 'informatics' to refer to computation, analysis, and database components of this multidisciplinary effort. Expertise in the area of informatics was provided, including reviewing research proposals, facilitating interagency and interlaboratory cooperation, liaising with the Human Genome newsletter group at Oak Ridge National Laboratory, and representing the US Department of Energy at technical meetings.

We have completed studies on the key pathways of monoterpene biosynthesis in sage and peppermint, and on biosynthetic enzymes. We have confirmed that monoterpene turnover does occur, have deciphered the function of this process in plants, delineated the essential features of the catabolic pathways for camphor and menthone, and initiated studies on the relevant enzymology. We have made a strong case, based on analytical, in vivo, and in vitro studies, that terpene accumulation (yield and composition) depends on the balance between biosynthetic and catabolic events, and provided supporting evidence that these processes are developmentally regulated and very closely associated with senescence (collapse) of the oil glands. We have demonstrated that foliar applied bioregulators influence terpene composition and yield, probably by a combination of effects in oil gland development and by more direct alteration of enzyme levels. These studies have provided a practical means for modifying terpene composition and yield and, moreover, have provided a powerful approach to studying developmental regulation in intact plants, explants and tissue culture systems. We have thus developed the fundamental background knowledge needed as well as the necessary experimental tools for studying the regulation of terpene metabolism.

In this grant period we have continued our efforts in the areas of PE basic radiochemistry, radiopharmaceutical synthesis, and preclinical radiopharmaceutical evaluation. A new synthetic sequence, consisting, of no-carrier-added fluorine-18 labeling of substituted benzaldehydes followed by reductive decarbonylation, has been developed. This new methodology can be applied to the fluorine-18 labeling of a wide variety of drugs not previously accessible through existing fluorine-18 labeling methods. Following up on a literature report that the ability to radiolabel aromatic rings can be predicted by ^{13}C-NMR chemical shifts, we have examined the generality of this correlation in aromatic rings bearing a variety of substituents. Although the original correlation holds for nitro substituted anisaldehydes, it cannot be extended to other rings substitution patterns. We have examined the relationship of in vivo localization of various fluorine-18 labeled dopamine uptake inhibitors to their in vitro binding affinities and lipophilicities. We have found that remarkably small decreases in binding affinity result in dramatic losses of in vivo binding to the desired high affinity binding sites. In order to probe the effects of endogenous neurotransmitter on the in vivo binding of radiolabeled dopamine uptake inhibitors, we have examined the in vivo regional localization of $[18_F]$ GBR 13119 after acute and chronic drug treatments which alter the endogenous levels of dopamine. We have found that acute changes in dopamine levels do not affect the binding of this radioligand, but chronic depletion of neurotransmitter results in down-regulation of the in vivo binding sites. 16 refs., 2 figs., 1 tab.

The IAEA has a programme component entitled "Nuclear Techniques in Communicable Diseases", the aims of which are to encourage research in the development of new methods of controlling communicable diseases and to transfer the technology to institutes in endemic regions. Implementation of the programme component includes information exchange through publications, symposiums and seminars. The two most recent seminars were held in Bombay in November 1988 and Belo Horizonte in November 1989, and a selection of the papers presented have been published in this Technical Document. Refs, figs and tabs.

Nuclear techniques provide powerful tools for the study of communicable diseases. They are used in epidemiological surveys to determine the incidence and prevalence of disease, as well as to diagnose current infection and monitor the efficacy of chemotherapy. The techniques provide a means to elucidate some of the mechanisms involved in pathogenesis and resistance resulting from host-parasite interactions, and have an important role in the development of control strategies. In certain parts of the world infectious diseases are still a big problem. Although chemotherapy and the control of the vector, where involved, would be the methods of choice for eradication of the disease, development of resistance to either the antibiotic or the pesticide require that other methods are also applied. Vaccination has been highly successful in controlling some diseases. A potential for such applications exists also in diseases like encephalitis, leprosy, leishmaniasis and malaria which are caused by a virus, a bacterium and parasites respectively. At least three of these diseases are in an epidemic form in North India. There is a tremendous hope that new recombinant DNA and nuclear techniques will not only be of help in an early and swift diagnosis of the disease-causing organism but also in the development of vaccines. This article deals with some of the recent progress made in the diagnosis and vaccine production of these diseases. (author). 12 refs.

7652 (IAEA-TECDOC–613, pp. 37-42) **Use of radiolabeled nucleic acid probes for the detection and identification of infectious organisms.** Tenover, F.C. Nucleic acid probes can be used to detect and identify a wide variety of infectious organisms from bacteria to helminthic worms. Commercially-produced kits are now available for the direct detection of Legionella species in clinical samples, for identification of Mycobacterium species growing on solid media or in broth, and for detection of a variety of other bacteria and viruses directly in clinical samples or tissues. ^{32}P and ^{125}I, which are used to label probes to high specific activity, continue to be used in commercially-prepared kits. ^{32}P-labeling remains as one of the most sensitive means of labeling nucleic acids probes. The advantages of using probes to detect and identify infectious agents include the rapid generation of results, the ability to broaden the spectrum of organisms identified by a clinical laboratory, and the high specificity of probe-based tests. The disadvantages of using probes include the high cost of the assays, the additional equipment required, and the inability to perform ancillary tests, such as antimicrobial susceptibility testing, which require having a pure culture of the organism available. None-the-less, nucleic acid probes already are having a very positive impact on the diagnosis of infectious diseases both in the industrialized and developing nations. (author). 11 refs.

7653 (IAEA-TECDOC–613, pp. 43-50) **Detection of Brugia malayi infected mosquitoes with a species specific DNA probe.** Kurniawan, L. (National Inst. of Health Research and Development, Jakarta (Indonesia). Communicable Diseases Research Centre); Harun, S.; Sim, B.K.L.; Piessens, W.F.; Atmosoedjono, S. International Atomic Energy Agency, Vienna (Austria). Jul 1991. (CONF-881150–: IAEA seminar for Asia and the Pacific on nuclear techniques in communicable and parasitic infections, Bombay (India), 21-25 Nov 1988). In *Nuclear and related techniques in the control of communicable diseases: Proceedings of regional seminars held in Bombay, India, 21-25 November 1988 and Belo Horizonte, Brazil, 30 October - 3 November 1989.* 194p. Order Number DE92613626. Source: OSTI; NTIS (US Sales Only); INIS.

A species specific DNA probe (pβm15) was used in a field area where two filarial infections coexist: Brugia malayi in man and Brugia pahangi in cats. In our laboratory at Jakarta, this DNA probe proved to be sensitive enough to detect 500 pg of purified Brugia malayi microfilarial DNA. One to two infective larvae of Brugia malayi could be detected with ease. This DNA probe did not react with infective larvae of Brugia pahangi, Wuchereria bancrofti and Dirofilaria spp. Mosquitoes, which are vectors in Riau, were collected and fed on microfilaremic patients of Riau. The set of mosquitoes were tested in parallel with mosquitoes infected with Brugia pahangi from cats. All fed mosquitoes were tested after 10-12 days. Only mosquitoes infected with Brugia malayi reacted with the assay. This study shows that we have succeeded in applying the DNA probe technique in Jakarta. Further application in the field should be encouraged, with some modification of the DNA probing techniques for cheaper and easier implementation. 6 refs, 3 figs, 1 tab.

7654 (IAEA-TECDOC-613, pp. 69-72) **The use of DNA probes in the detection of P. falciparum in asexual blood stage.** Prapanthadara, L. (Chiang Mai Univ., Chiang Mai (Thailand). A clone, pUN K1-45, containing a 3.9 Kb fragment from the P. falciparum Thai isolate K1, was constructed. This clone was specifically hybridized with P. falciparum DNA and not with other plasmodial species, e.g., P. knowlesi, P. cynomolgi, P. chabaudi and P. vivax nor with man and mosquito. It was able to detect P. falciparum infected blood at parasitemia levels of 0.005%. Dot blot hybridization, using pUN K1-45 as DNA probe revealed that this clone could detect 17 isolates of P. falciparum infected blood from northern Thailand. (author). 8 refs, 2 figs.

The genes of Trypanosoma cruzi, the causative agent of Chagas Disease, were cloned in the expression vector lambda gt11, and screened with a trypamastigote antiserum. Twelve clones expressing fusion proteins reacting to the antiserum were selected and further analysed in the western blot. One clone (7/2) expressing an antigen present in the cytoplasm of the parasite was found to react specifically with chagasic sera and may have potential as an immunodiagnostic reagent. (author). 11 refs, 4 figs.

7657 (IAEA-TECDOC-613, pp. 85-97) **Identification, characterization and cloning of Entamoeba histolytica adhesins: Their potential use in diagnosis.** Orozco, E. International Atomic Energy Agency, Vienna (Austria). Jul 1991. (CONF-8910558-: IAEA seminar for Latin America on nuclear techniques in parasitic and communicable diseases, Belo Horizonte (Brazil), 30 Oct - 3 nov 1989). In *Nuclear and related techniques in the control of communicable diseases: Proceedings of regional seminars held in Bombay, India, 21-25 November 1988 and Belo Horizonte, Brazil, 30 October - 3 November 1989.* 194p. Order Number DE92613626. Source: OSTI; NTIS (US Sales Only); INIS.

Entamoeba histolytica adhesins were detected by the generation of monoclonal antibodies (MAbs) inhibitors of adhesion. In other experiments trophozoites were radiolabeled with ^{125}I or with (^{35}S)-methionine and incubated with red blood cells (RBS's) or epithelial MDCK cells. Labeled amebic proteins of 210, 160, 112, 90, 70, 50 and 24 kDa were detected adhered on RBCs. Iodinated MDCK proteins formed ligand-receptor complexes with amebic proteins of 112 kDa, 90 and 48 to 50 kDa, when incubated with amebic proteins separated by gel electrophoresis. When RBC's interacted with adherence-deficient mutants, used in this work as highly negative genetic controls, proteins of 112 and 90 kDa appeared diminished on RBS surface, in comparison with wild type strain. The 112 kDa adhesin was not detected in a monoxenic nonpathogenic E. histolytica strain, isolated from an asymptomatic carrier. An E. histolytica DNA library was constructed in lambda gt-11, and recombinant clones were selected using polyclonal antibodies against the 112 kDa adhesin. In spite of the fact that DNA of the parasite was cloned, production of the hybrid protein in Escherichia coli was relatively efficient. Correlation of the presence of adhesins with the virulence of E. histolytica trophozoites encourage us to propose these proteins and their antibodies as good candidates in the design of reliable and inexpensive diagnosis and vaccine methods. (author). 23 refs, 7 figs, 2 tabs.

7658 (IAEA-TECDOC-613, pp. 107-112) **RIA and ELISA as diagnostic tools in the study of filariasis.** Harinath, B.C. (Mahatma Gandhi Inst. of Medicinal Sciences, Sevagram, Wardha (India). Dept. of Biochemistry). International Atomic Energy Agency, Vienna (Austria). Jul 1991. (CONF-881150-: IAEA seminar for Asia and the Pacific on nuclear techniques in communicable and parasitic infections, Bombay (India), 21-25 Nov 1988). In *Nuclear and related techniques in the control of communicable diseases: Proceedings of regional seminars held in Bombay, India, 21-25 November 1988 and Belo Horizonte, Brazil, 30 October - 3 November 1989.* 194p. Order Number DE92613626. Source: OSTI; NTIS (US Sales Only); INIS.

The immunodiagnosis of filariasis has been a major challenge to the parasite immuno-chemist. Studies using in vitro and in vivo released antigens in immunoradiometric assay (IRMA) and Enzyme linked immunosorbent assay (ELISA) have shown good immunodiagnostic potential. Biosynthetically labelled Wuchereria bancrofti excretory-secretory (ES) antigen has been used in radioimmunoassay and compared with the ELISA system. As little as 60 pg ES antigen protein was found to be sufficient in detecting filarial antibody by stick ELISA. Similarly, an antigen fraction UFA C2A isolated from filarial patient's urine was found to be highly sensitive requiring as little as 500 attogram antigen protein per test. IgG fraction of human serum immunoglobulin (FSIgG) has been successfully used for the detection of filarial antigen in immune complexes, hydrocele fluid, filarial urine and sera. (author). 15 refs, 1 fig., 1 tab.

7659 (IAEA-TECDOC-613, pp. 113-119) **A study of antibody response in leprosy using solid phase radioimmunoassay with M. leprae specific neoglycoprotein (NT-O-BSA).** Praputpittaya, K. (Chiang Mai Univ., Chiang Mai (Thailand). Dept. of Clinical Immunology); Rungruengthanakit, K.;

Suriyanon, V. International Atomic Energy Agency, Vienna (Austria). Jul 1991. (CONF-881150–: IAEA seminar for Asia and the Pacific on nuclear techniques in communicable and parasitic infections, Bombay (India), 21-25 Nov 1988). In *Nuclear and related techniques in the control of communicable diseases: Proceedings of regional seminars held in Bombay, India, 21-25 November 1988 and Belo Horizonte, Brazil, 30 October - 3 November 1989.* 194p. Order Number DE92613626. Source: OSTI; NTIS (US Sales Only); INIS.

A solid phase radioimmunoassay (RIA) to study antibody response in leprosy was set up with natural trisaccharide-octyl-bovine serum albumin (NT-O-BSA), a Mycobacterium leprae (M. leprae)-specific synthetic antigen. Both IgM and all immunoglobulin (Igs) antibodies in sera of 62 lepromatous (28 new and 34 old LL/BL), 18 tuberculoid (TT/BT), 25 tuberculosis (TB) patients and 33 normal controls, were studied for their reactivities to the antigen using ^{125}I-labelled anti-human IgM and anti-human Igs, respectively. Binding activities and positivity rates (based on X+3SD of normal controls) of IgM antibodies were the highest in new LL/BL and moderate in TT/BT sera. Tuberculous and normal sera were devoid of IgM antibodies to the antigen. The same pattern of binding activities and positivity rates were also found for all Igs to the NT-O-BSA. However, positivity rates of all Igs were higher than those of IgM, particularly in sera of LL/BL and TT/BT. Only one out of fourteen TB and no normal sera were positive. Our results suggest that the RIA with this synthetic antigen is highly sensitive and specific to M. leprae injection and should be useful for serodiagnosis and also seroepidemiology of leprosy. (author). 10 refs, 1 fig., 1 tab.

7660 (IAEA-TECDOC–613, pp. 121-129) **Specificity of monoclonal antibodies and isolation of serospecific antigen of Mycobacterium tuberculosis.** Kadival, G.V. (Bhabha Atomic Research Centre, Bombay (India). Radiation Medicine Centre); Chaparas, S.D.; Hussong, D. International Atomic Energy Agency, Vienna (Austria). Jul 1991. (CONF-881150–: IAEA seminar for Asia and the Pacific on nuclear techniques in communicable and parasitic infections, Bombay (India), 21-25 Nov 1988). In *Nuclear and related techniques in the control of communicable diseases: Proceedings of regional seminars held in Bombay, India, 21-25 November 1988 and Belo Horizonte, Brazil, 30 October - 3 November 1989.* 194p. Order Number DE92613626. Source: OSTI; NTIS (US Sales Only); INIS.

Mouse monoclonal antibodies to M. tuberculosis were produced by conventional techniques where spleen cells from hyperimmunized Balb-c mice were fused with Sp2/0 myeloma cells using polyethylene glycol. Five clones were isolated designated as HGT1, HGT2, HGT3a, HGT4 and HGT6. Specificity and reactivity of these antibodies were tested by ELISA and immunoblot studies. HGT3a represented the most specific of the monoclonal antibodies produced and it was decided to isolate the antigen by affinity chromatography and study its humoral and cellular reactions. The specificity of the antigen was tested in a vertical study by immune detection on western blots reacted with hyperimmune sera against M. tuberculosis, M. bovis (BCG) and 10 other Mycobacterium species. The antigen was detected only by antisera to M. tuberculosis and M. bovis (BCG). Specificity in cell mediated immunity was tested by skin tests in guinea pigs sensitized with M. tuberculosis, Mycobacterium intracellulare and Mycobacterium kansasii and by lymphocyte proliferation tests. The 38 KDa antigen induced positive skin test reactions regardless of the Mycobacterium species used to sensitize the animal. Lymphocyte proliferation was observed in the presence of 38 KDa antigen, M. tuberculosis sonicate antigen, tuberculin purified protein derivative and to M. kansasii and M. intracellulare. The 38 KDa antigen appears to contain a specific epitope detected by serology but also contains epitopes that are cross-reactive for cell mediated immunity. 17 refs, 6 figs, 1 tab.

7661 (IAEA-TECDOC–613, pp. 131-136) **Comparison of immunoradiometric assay (IRMA) and liquid phase radioimmunoassay (LPRIA) in serodiagnosis of tuberculosis.** Lahiri, V.L. (S.N. Medical College, Agra (India). Post-Graduate Dept. of Pathology); Bhattacharjee, P.K.; Hazra, D.K. International Atomic Energy Agency, Vienna (Austria). Jul 1991. (CONF-881150–: IAEA seminar for Asia and the Pacific on nuclear techniques in communicable and parasitic infections, Bombay (India), 21-25 Nov 1988). In *Nuclear and related techniques in the control of communicable diseases: Proceedings of regional seminars held in Bombay, India, 21-25 November 1988 and Belo Horizonte, Brazil, 30 October - 3 November 1989.* 194p. Order Number DE92613626. Source: OSTI; NTIS (US Sales Only); INIS.

A comparison between conventional sandwich 2 site- 2 step-IRMA and Liquid Phase Radioimmunoassay (LPRIA) system in the detection of tubercular antigen in the various body fluids was attempted using the antibody tracer (murine monoclonal antibody WTB$_{72}$) in IRMA and antigen tracer in LPRIA using Anti-M duvelli. The positivity in pulmonary tuberculosis in the IRMA was 90.47% while in LPRIA it was 43.3%. Bone T.B. showed 60% positivity with IRMA and 71.47% with LPRIA. TBM cases showed 87.5% positivity with IRMA and 93.3% with LPRIA. In tubercular pleural effusion the positivity was 66.6% in IRMA and 85.7% in LPRIA while in tubercular ascites the positivity was 70% in IRMA and 85.7% in LPRIA. The comparison of sensitivity and specificity showed that in serum this IRMA works better while in pleural and ascitic fluid LPRIA is superior. (author). 6 refs, 5 tabs.

7662 (IAEA-TECDOC–613, pp. 137-142) **Detection of antigenemia in the body fluids of patients with tuberculosis by conventional 2-site immunoradiometric assay (IRMA).** Lahiri, V.L. (S.N. Medical College, Agra (India). Post-Graduate Dept. of Pathology); Bhattacharjee, P.K.; Hazra, D.K. International Atomic Energy Agency, Vienna (Austria). Jul 1991. (CONF-881150–: IAEA seminar for Asia and the Pacific on nuclear techniques in communicable and parasitic infections, Bombay (India), 21-25 Nov 1988). In *Nuclear and related techniques in the control of communicable diseases: Proceedings of regional seminars held in Bombay, India, 21-25 November 1988 and Belo Horizonte, Brazil, 30 October - 3 November 1989.* 194p. Order Number DE92613626. Source: OSTI; NTIS (US Sales Only); INIS.

The conventional 2-site immunoradiometric assay (IRMA) for the detection of tubercular antigen in various body fluids of 94 tubercular patients was developed using anti-tubercular murine monoclonal antibody, WTB$_{72}$. The positivity in sera of pulmonary tuberculosis was 90.4% only, and in bone, T.B. 60% with no false positive reaction in sera. CSF from the cases of Tubercular meningitis (TBM) showed 87.5% positivity with no false positivity in healthy control CSF, but one CSF from pyogenic meningitis showed a positive result. In tubercular pleural effusion, the positivity was 66.6% with no false positive result, while in Tubercular ascites positivity was 70% with 25% positivity in control ascites. 7 refs, 3 tabs.

7663 (IAEA-TECDOC–613, pp. 143-148) **Radioimmunoassay in the diagnosis of tuberculosis.** Ashtekar, M.D. (Bhabha Atomic Research Centre, Bombay (India). Radiation Medicine Centre); Samuel, A.M. International Atomic Energy Agency, Vienna (Austria). Jul 1991. (CONF-881150–: IAEA seminar for Asia and the Pacific on nuclear techniques in communicable and parasitic infections, Bombay (India), 21-25 Nov 1988). In *Nuclear and related techniques in the control of communicable diseases: Proceedings of regional seminars held in Bombay, India, 21-25 November 1988 and Belo Horizonte, Brazil, 30 October - 3 November 1989.* 194p. Order Number DE92613626. Source: OSTI; NTIS (US Sales Only); INIS.

A solid phase radioimmunoassay developed at the institute was evaluated for its ability to measure TB antigen and anti-TB antibody in patients with pulmonary and extrapulmonary tuberculosis. The TB antigen as well as the anti-TB antibody levels were significantly elevated in patients with tuberculosis in comparison with controls. Following treatment, the antigen levels fell in some of the patients with a concomitant rise in antibody. (author). 12 refs, 6 tabs.

7664 (IAEA-TECDOC–613, pp. 149-155) **Evaluation of immunoscintigraphic techniques in tuberculosis.** Malpani, B.L. (Bhabha Atomic Research Centre, Bombay (India). Radiation Medicine Centre); Kadival, G.V.; Samuel, A.M. International Atomic Energy Agency, Vienna (Austria). Jul 1991. (CONF-881150–: IAEA seminar for Asia and the Pacific on nuclear techniques in communicable and parasitic infections, Bombay (India), 21-25 Nov 1988). November 1989. 194p. Order Number DE92613626. Source: OSTI; NTIS (US Sales Only); INIS.

The potential use of radiolabelled antibodies as an in vivo targeting agent in immunoscintigraphy for tuberculoma lesions, was studied in rabbits with experimentally induced lesions in the thigh. 300 μgCi of ^{131}I-anti-BCG antibody was injected i.v. and scintiscans taken 1 to 9 days later using a medium energy collimatory on GE Gamma Camera. Localization of the antibody was seen from the third day but significant concentration of the antibody was also noted in the background and major organs. By day 6, most of the background was clear with a minimum uptake in liver and kidneys. Non-specific scans using ^{131}I-BSA or 99mTC-RBC blood pool did not show any concentration at the site of lesion. (author). 11 refs, 3 figs.

7665 (INIS-BR--2849) **Separation of radioimmunoassay in magnetic phase with particles prepared at the IPEN and its comparison with conventional methodologies.** Araujo, E.A. de. Instituto de Pesquisas Energeticas e Nucleares (IPEN), Sao Paulo, SP (Brazil). 1991 154p. (In Portuguese). Order Number DE92613668. Source: OSTI; NTIS (US Sales Only); INIS.

In the present work two main objectives were chosen. The first was the preparation for the execution of the magnetic phase separation technique, useful for the radioimmunoassay as well as for the most modern and most efficient immunoradiometric assay. The second objective, of a theoretical-practical kind and directly linked to the first, was the realization of a study about the precision of the technique with synthesized products compared with imported products and with two liquid phase separation techniques: the second antibody and polyethyleneglycol (PEG). This analysis was performed with the help of precision profiles built according to R.P.Ekins' recommendations. (author).

7666 (INIS-BR--2858) **The total plasmatic estriol on normal gestation.** Thiesen, A.L. Universidade do Estado, Rio de Janeiro, RJ (Brazil). Centro Biomedico. 1980 73p. (In Portuguese). Order Number DE92613669. Source: OSTI; NTIS (US Sales Only); INIS.

The total plasmatic estriol in normal pregnants was determinated by radioimmunological method using estriol labelled with sup(125)I. The obtained results presented similar results in comparison with methods using sup(19)C and sup(3)H. (author).

7667 (INIS-BR--2862) **Pulmonary arterio-venous micro fistulae - Diagnostic.** Ebram, J.C. Universidade do Estado, Rio de Janeiro, RJ (Brazil). Centro Biomedico. 1989 86p. (In Portuguese). Order Number DE92613670. Source: OSTI; NTIS (US Sales Only); INIS.

Four patients with pulmonary arterio-venous micro-fistulae - of which two were male (50%) - the ages varying from 10 to 43 (X sup(≈) = 22,7), were studied at the Cardiology Centre of the 6th Ward of Santa Casa da Misericordia Hospital in Rio de Janeiro. They were all basically suffering from Manson's Schistosomiasis, the hepato-splenic form in 3 cases (75%) and the Rendu Osler Weber disease with juvenile cirrhosis in 1 case (25%). All four of them had portal hypertension. The individual cases were clinically evaluate with X-rays, scintillographic and hemodynamic tests. (author).

Several case of epidermoid carcinomas in buccal cavity treated by brachytherapy associated with others therapeutic techniques are described, including the results using different therapeutical methods and the clinical and technical parameters considered on the evolution of the disease. (C.G.C.).

7673 (INIS-mf--13072) **Moment problems in Hilbert space with applications to magnetic resonance imaging.** Zwaan, Marcel. Vrije Univ., Amsterdam (Netherlands). 28 Feb 1991 139p. Order Number DE92613631. Source: OSTI; NTIS (US Sales Only); INIS.

Includes summary in Dutch and subject index.

This thesis is concerned with the mathematical and computational aspects of reconstruction techniques by means of magnetic resonance imaging, in particular for the time-dependent case, referred to as dynamic MRI. The main subjects are: a mathematical framework for dynamic MRI reconstruction; analytic solutions, numerical algorithms and development of reconstruction techniques; stability analysis of the reconstruction algorithms; comparison between these algorithms. (author). 63 refs.; 38 figs.; 5 tabs.

7674 (INIS-mf--13077) **Gadolinium-DTPA enhanced MRI in myocardial infarction: An experimental and clinical study.** Dijkman, P.R.M. van. Rijksuniversiteit Leiden (Netherlands). 30 Oct

1991 163p. Order Number DE92613632. Source: OSTI; NTIS (US Sales Only); INIS.

Financially supported by the Interuniversity Cardiology Institute of The Netherlands, the Netherlands Heart Foundation, and the '3A out Fund' of the Department of Internal Medicine, University Hospital Leiden; includes summary in Dutch.

This thesis focuses on one aspect of cardiac magnetic resonance imaging (MRI) for noninvasive screening of ischemic heart disease: the identification and quantification of acutely infarcted myocardium using gadolineum-diethylene triamine pentaacetic acid (Gd-DTPA) enhanced T1-weighted MRI in a clinical and experimental setting. (author). 296 refs.; 34 figs.; 4 tabs.

7675 (INIS-mf–14018) **The occurrence of hyperthyroidism following administration of a contrast medium.** Buelhoff, D. Bochum Univ. (Germany). Medizinische Fakultaet. 13 Oct 1987 57p. (In German). Order Number DE92758944. Source: OSTI; NTIS (US Sales Only); INIS.

During the study described here attempts were made to establish a link between the occurrence of hyperthyreoidism and prior contamination with iodinated contrast media in connection with X-ray procedures, among which particular attention was given to lymphography. In a prospective study performed for that purpose five out of the 108 patients subjected to lymphography were found to develop hyperthyroidism, which manifested itself after a latency period of one month. Further retrospective analyses on the basis of 2453 patients receiving lymphography showed that among these individuals fifteen developed hyperthyroidism during the first year after the procedure. In all, twenty cases of hyperthyroidism occurred in this cohort within a period of two years and six months after lymphography. Retrospective studies were also performed in a group of patients showing excessive production of thyroid hormone who, according to their case reports, developed the disease within a period of up to three months after opacification of the bile ducts or urinary tract. Direct links could be established for 81 (16.6%) among the 499 patients questioned for this purpose. (orig.).

7676 (Juel–2509) **Radon therapy in the Soviet Union. Report on the visit to the National Research Center for Medical Rehabilitation and Physical Therapy in Moscow, September 18-20, 1990.** Sansoni, B. (Forschungszentrum Juelich GmbH (Germany). Zentralabteilung fuer Chemische Analysen); Andrejew, S.V. Forschungszentrum Juelich GmbH (Germany). Zentralabteilung fuer Chemische Analysen. Aug 1991. 181p. (In German). Order Number DE92750180. Source: OSTI; NTIS (US Sales Only); INIS.

In the Soviet Union approximately one million courses of radon treatment each lasting three weeks are prescribed every year. The curative application of radon used for cardiovascular diseases, including aftercare in cases of cardiac infarction, disorders of the locomotor system and joints and muscles, the male and female sexual system, diseases of the nervous system, endocrinology and metabolic diseases. Contraindication practice is similar to that in Central Europe. Radon is given to skin stimulation by wet and above all dry baths. The radiation exposure of patients from these three-week radon treatments is relatively low. The radon effect is interpreted as 'radiation flash' stimulating the nervous system. The skin plays a particular role in this process, acting as the stimulus acceptor. (orig./MG).

7677 (LUMEDW-MEXL–1022-1991) **Digital luminescence radiography of the chest: A clinical and experimental study.** Kehler, M. Lund Univ. (Sweden). Dept. of Diagnostic Radiology. Oct 1991. 28p. Order Number DE92613633. Source: OSTI; NTIS (US Sales Only); INIS.

The aim of the present study was to evaluate the efficacy of a digital system in chest radiology compared to the conventional film-screen system. The first studies (1-3) were purely clinical, had two parts, one clinical and one using phantoms, and the 5:th used solely phantoms. Except for the first - pilot - study, the studies were performed as receiver operating characteristic (ROC) analysis. From one exposure, two digital radiographs were obtained, one simulating the film-screen radiograph and one enhanced, using an unsharp mask. The conventional radiograph was compared to this double-image, but in addition to this, even to the simulated normal and enhanced separately (1-3). To evaluate the value of inverted (positive) radiographs, the original digital (negative) radiographs were inverted, and then compared to the originals (4). As digitzation means easy storing and transfer of data and possibility of electronic display, the diagnostic performance of an interactive workstation was assessed (5). In the clinical studies, a variety of chest affections were used: atelectasis, tumor, pneumothorax, fibrosis, mediastinal and bony changes, tuberculosis, incompensations and enlargement of the heart (1), pneumothorax (2), fibrosis (3), and tumor (4). In the phantom studies, test objects simulating tumors (4) and pneumothorax (5) were used. In no study was statistical significant difference seen between the digital and conventional system (p>0.05). Neither in the clinical nor the phantom study did inversion of the radiographs improve diagnostic performance. The workstation performed almost equally well as the radiographs even with a resolution of 1.25 1p/mm compared to the digital radiographs 2.5 and film-screen radiographs 5 1p/mm. (au) (50 refs.).

7678 (NUREG/CR–5798) **Pilot program to assess proposed basic quality assurance requirements in the medical use of byproduct materials.** Kaplan, E. (Brookhaven National Lab., Upton, NY (United States)); Nelson, K.; Meinhold, C.B. Nuclear Regulatory Commission, Washington, DC (United States). Div. of Regulatory Applications. Oct 1991. 61p. Sponsored by Nuclear Regulatory Commission. DOE Contract AC02-76CH00016. (BNL-NUREG–52303). Source: OSTI; NTIS; INIS; GPO.

In January 1990, the Nuclear Regulatory Commission (NRC) proposed amendments to 10 CFR Part 35 that would require medical licensees using byproduct material to establish and implement a basic quality assurance program. A 60-day real-world trial of the proposed rules was initiated to obtain information beyond that generally found through standard public comment procedures. Volunteers from randomly selected institutions had opportunities to review the details of the proposed regulations and to implement these rules on a daily basis during the trial. The participating institutions were then asked to evaluate the proposed regulations based on their personal experiences. The pilot project sought to determine whether medical institutions could develop written quality assurance programs that would meet the eight performance-based objectives of proposed Section 35.35. In addition, the NRC wanted to learn from these volunteers if they had any recommendations on how the rule could be revised to minimized its cost and to clarify its objectives without decreasing its effectiveness. It was found that licensees could develop acceptable QA programs under a performance-based approach, that most licensee programs did meet the proposed objectives, and that most written QA plans would require consultations with NRC or Agreement State personnel before they would fully meet all objectives of proposed Section 35.35. This report describes the overall pilot program. The methodology used to select and assemble the group of participating licensees is presented. The various workshops and evaluation questionnaires are discussed, and detailed findings are presented. 7 refs.

7679 **Acyclonucleosides of 2-nitroimidazole and uses as diagnostic and therapeutic agents.** Srivastava, P.C.; Hasan, A. To Dept. of Energy. 1990. Filed date 18 Jun 1990. USA Patent patent application 7-539,493. 16p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE92003750. Source: OSTI; NTIS; GPO Dep.

An acyclonucleoside of nitroimidazole having the ability to specifically bind to tumor cells and useful for therapy, chemotherapy, imaging and radiosensitizing the tumor cells.

Contract AC05-84OR21400. From Technology 2000; San Jose, CA (United States); 3-5 Dec 1991. Order Number DE92002707. Source: OSTI; NTIS; GPO Dep.

An effective on-line monitoring technique for toxic waste bioremediation using bioluminescent microorganisms has demonstrated great potential for the description and optimization of biological processes. The lux genes of the bacterium Vibrio Fascheri are used by this species to produce visible light. The lux genes can be genetically fused to the control region of a catabolic gene, with the result that bioluminescence is produced whenever the catabolic gene is induced. Thus the detection of light from a sample (monoculture, consortium, or bioreactor) indicates that genetic expression from a specific gene is occurring. We have used this technique to monitor biodegradation of specific contaminants from waste sites. For these studies, fusions between the lux genes and the operons for naphthalene (nah) and toluene/xylene (xyl) degradation were constructed. Strains carrying one of these fusions respond sensitively and specifically to target substrates. Bioluminescence from these cultures can be rapidly measured in a non-destructive and non-invasive manner. The potential for this technique in this and other biological systems is discussed. 7 refs., 3 figs.

7681 (CONF-9106303–, pp. 77-78) **Microbial mineralization of coal-derived hydrophobic organic contaminants: The role of bio-surfactant/emulsifier and solubilization.** Luthy, R.G. (Carnegie Mellon Univ., Pittsburgh, PA (United States)). USDOE Pittsburgh Energy Technology Center, PA (United States). Advanced Power Generation and Fundamental Research Div. Jun 1991. DOE Contract FG22-90PC90303. From University coal research program at historically black colleges and universities; Pittsburgh, PA (United States); 25-27 Jun 1991. In *Abstracts and research accomplishments of university coal research projects.* 207p. Order Number DE92003115. Source: OSTI; NTIS.

This research addresses physico-chemical and biochemical solubilization and mineralization reactions for polycyclic aromatic hydrocarbon (PAH) compounds in coal tar. The emphasis of the investigation is on understanding the rate-controlling processes for microbial degradation of organic-phase PAH in the environment and in wastewater treatment processes through determination of the kinetics of solute solubilization and rates of mineralization. The project will evaluate abiotic and biotic solubilization phenomena, and explore possible synergistic interactions between PAH-degrading bacteria and bio-surfactant/emulsifier-producing organisms that have been shown to be potentially useful in coal biotechnology. PAH-degrading microorganisms have been cultured and prepared for use in mineralization tests. Bio-surfactant producing microorganisms have been procured and cultured. A protocol for assessing coal tar solubilization rates has been developed; this procedure is being evaluated.

7682 (DOE/ER/60989–2) **Phylogenetic relationships among subsurface microorganisms: Progress report.** Nierzwicki-Bauer, S.A. Rensselaer Polytechnic Inst., Troy, NY (United States). [1991]. 10p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-90ER60989. Order Number DE92004421. Source: OSTI; NTIS; GPO Dep.

This project involves the development of group specific 16S ribosomal RNA-targeted oligonucleotide hybridization probes for the rapid detection of specific types of subsurface organisms (e.g., groups of microbes that share certain physiological traits). Major accomplishments for the period of 6/91 to 12/1/91 are described. Nine new probes have been synthesized on the basis of published 16S rRNA sequence data from the Ribosomal Database Project. We have initiated rapid screening of many of the subsurface microbial isolates obtained from the P24 borehole at the Savannah River Site. To date, we have screened approximately 50% of the isolates from P24. We have optimized our insitu hybridization technique, and have developed a cell blot hybridization technique to screen 96 samples on a single blot. This is much faster than reading 96 individual slides. Preliminary experiments have been carried out which indicate specific nutrients can be used to amplify rRNA only in those organisms capable of metabolizing those nutrients. 1 tab., 2 figs.

7683 (DOE/OR/00033–T459) **Molecular analysis of deep subsurface bacteria.** Jimenez Baez, L.E. Puerto Rico Univ., Rio Piedras (Puerto Rico). Sep 1989. 147p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-76OR00033 ;AC09-76SR00001. Order Number DE92004767. Source: OSTI; NTIS; INIS; GPO Dep.

Deep sediments samples from site C10a, in Appleton, and sites, P24, P28, and P29, at the Savannah River Site (SRS), near Aiken, South Carolina were studied to determine their microbial community composition, DNA homology and mol %G+C. Different geological formations with great variability in hydrogeological parameters were found across the depth profile. Phenotypic identification of deep subsurface bacteria underestimated the bacterial diversity at the three SRS sites, since bacteria with the same phenotype have different DNA composition and less than 70% DNA homology. Total DNA hybridization and mol %G+C analysis of deep sediment bacterial isolates suggested that each formation is comprised of different microbial communities. Depositional environment was more important than site and geological formation on the DNA relatedness between deep subsurface bacteria, since more 70% of bacteria with 20% or more of DNA homology came from the same depositional environments. Based on phenotypic and genotypic tests Pseudomonas spp. and Acinetobacter spp.-like bacteria were identified in 85 million years old sediments. This suggests that these microbial communities might have been adapted during a long period of time to the environmental conditions of the deep subsurface.

7684 (DOE/ER/60409–6) **Modulation of lymphopoiesis: Comprehensive progress report, January 1, 1991–July 30, 1991.** Rosse, C. Washington Univ., Seattle, WA (United States). Dept. of Biological Structure. [1991]. 30p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-86ER60409. Order Number DE92004451. Source: OSTI; NTIS; GPO Dep.

During the current project period we have demonstrated correspondence between animal models and in vitro models of modulated lymphopoiesis. Our finding that G-CSF, a growth factor for neutrophil granulocytes, suppresses lymphopoiesis in long term bone marrow cultures (LTBMC) has important implications both for understanding the regulatory mechanisms of hemopoiesis and for clinical use of recombinant growth factors that are beginning to be widely used for the treatment of a variety of diseases. During the present project period we adopted LTBMC systems developed by others for the purposes of our specific aims. Also we developed a novel long term culture system for NK cells. The discovery of a new growth factor, O-CSF, specific for osteoclasts and the establishment of a clonal assay system that provides evidence for a new class of hemopoietic progenitor cells, the osteoclast progenitor, are important contributions. Given the important role T cells play in the immune response and in the regulation of other lymphohemopoietic cell lineages through the lymphokines they secrete, the need for an in vitro system that lends itself to the analysis of T cell maturation and to the testing of factors that may adversely affect T lymphopoiesis cannot be overemphasized. We believe that we can exploit an advantageous set of circumstances that present an excellent opportunity for initiating a focused experimental program for developing such a system. By a systematic and selective analysis of molecular interactions between heterogenous thymic stromal cells and T cell progenitors at different stages of maturation, it will be possible for our program to define the complement of critical cellular interactions on which successive stages of T lymphopoiesis depend. The experiments we propose will lay a rational foundation for the development of a long term culture system for T lymphopoiesis. 24 refs., 7 figs.

7685 (DOE/ER/60656–5) **Cellular morphometry of the bronchi of human and dog lungs: Progress report, April 1, 1991–October 1, 1991.** Robbins, E.S. New York Univ., NY (United States). Dept. of Cell Biology. Sep 1991. 12p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-88ER60656. Order Number DE92003421. Source: OSTI; NTIS; INIS; GPO Dep.

One hundred and forty-seven bronchial samples (generations 3–6) from 66 patients (62 usable; 36 female, 26 male; median age 61) have been dissected by generation from fixed surgical lung specimens obtained after the removal of pathological lesions. In addition, one hundred and fifty-six mongol dog bronchi (generations 2–6) dissected from different lobes of 26 dog lungs have also been similarly prepared. One hundred and twenty-seven human samples have been completely processed for electron microscopy and have yielded 994 electron micrographs of which 655 have been entered into the Computerized Stereological Analysis System (COSAS) and been used for the measurement of the distances of basal and mucous cell nuclei to the epithelial free surface. Similarly 328 micrographs of dog epithelium from 33 bronchial samples have been used to measure the distances of basal and mucous cell nuclei to the epithelial free surface and have been entered into COSAS. Using the COSAS planimetry program, we continue to expand our established data bases which describe the volume density and nuclear numbers per electron micrograph for 5 cell types of the human bronchial epithelial lining of men and women, as well as smokers, non-smokers and ex-smokers and similar parameters for the same 5 epithelial cell types of dog bronchi. Our micrographs of human bronchial epithelium have allowed us to analyze the recent suggestion that the DNA of lymphocytes may be subject to significant damage from Rn progeny while within the lung. Since the last progress report three papers have been submitted for publication. 17 refs., 4 tabs.

7686 (DOE/OR/00033–T453) **Development of a revised mathematical model of the gastrointestinal tract.** Barker, A. Michigan Univ., Ann Arbor, MI (United States). School of Public Health. Jan 1991. 181p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-76OR00033. Order Number DE92004748. Source: OSTI; NTIS; INIS; GPO Dep.

The objectives of this research are as follows. First, to incorporate new biological data into a revised mathematical adult gastrointestinal tract model that includes: ingestion in both liquid and solid forms; consideration of absorption in the stomach, small intestine, ascending colon, transverse colon or not at all; gender and age of the adult; and whether the adult is a smoker or not. Next, to create a computer program in basic language for calculating residence times in each anatomical section of the GI tract for commonly used radionuclides. Also, to compare and contrast the new model with the ICRP 30 GI tract model in terms of physiological concepts, mathematical concepts, and revised residence times for several commonly used radionuclides. Finally, to determine whether the new model is sufficiently better than the current model to warrant its use as a replacement for the Eve model.

7687 (CNIC–00404) **The new peanut germplasm resources produced by gamma and neutron irradiation and their applications.** Qiu Qingshu (Peanut Research Institute of Shandong Province, Laixi (China)); Lu Rongrong; Yu Shanlin; Shen Fuyu; Lu Zhuzhang; Bi Yingna. China Nuclear Information Centre, Beijing, BJ (China). Jun 1990. 10p. (In Chinese). (CSNAS–0031.). Order Number DE92613550. Source: OSTI; NTIS (US Sales Only); INIS.

Three kinds of peanut seeds and plants (eary, mid, and late maturation) including more than ten varieties having different physiological states and at various developing stages were treated by gamma-ray and fast neutrons. The new 226 accessions of valuable germplasm have been obtained. Some of them are rare germplasm resources which have mutants of high lysine, high ratio of oleic/linoleic and high salt tolerance. These mutants are valuable in the genetic field. Through mutaion breeding the extremely early-maturation variety 'Luhua 6' and high yield aeriety 'P12' with stronger peg have been developed. At present they are being planted in the large area of China.

7688 (CNIC–00437) **The preservation of lotus seeds by irradiation technique.** Lan Junming (Hunan Inst. of Atomic Energy Application in Agriculture (China)); Tang Chuandao. China Nuclear Information Centre, Beijing, BJ (China). Aug 1990. 12p. (In Chinese). (CSNAS–0035.). Order Number DE92613564. Source: OSTI; NTIS (US Sales Only); INIS.

The preservation test results of lotus seeds by gamma-ray irradiation technique are introduced. The results showed that the sitophilus, penicillus and aspergillus oryzae caused the great damage of lotus seeds. It was found that the radiation doses of deactivation for the insects and the mould were 0.8 kGy and 5 kGy respectively. The irradiated seeds packaged in the cloth bags and stored in the storehouse were not damaged by the insects and moulds for three years. The measured resutls also showed that the nutrient compositions were not changed and the pathogenic bacteria were not found. The irradiated lotus seeds are healthy and safe to the people.

7689 (IAEA-TECDOC–613, pp. 17-25) **Applications of radionuclides in the study of cellular immune mechanisms in helminthic infections.** Phillips, S.M. (Pennsylvania Univ., Philadelphia, PA (United States). School of Medicine); Perrin, P.J. International Atomic Energy Agency, Vienna (Austria). Jul 1991. (CONF-881150–: IAEA seminar for Asia and the Pacific on nuclear techniques in communicable and parasitic infections, Bombay (India), 21-25 Nov 1988). In *Nuclear and related techniques in the control of communicable diseases: Proceedings of regional seminars held in Bombay, India, 21-25 November 1988 and Belo Horizonte, Brazil, 30 October - 3 November 1989.* 194p. Order Number DE92613626. Source: OSTI; NTIS (US Sales Only); INIS.

Radionuclide techniques have been utilized in a variety of venues to elucidate the cellular basis of immunity and immunopathology. These techniques are powerful tools in the definition of antigens or epitopes relevant to the immune system. Incorporation labelling of living parasites as well as external labelling of secreted or derived products has been accomplished. These labelled antigens have been used as markers for purification, assessment of immunological reactivity, and measurement of the fate and distribution of epitopes. Such techniques have also been used to study the diversity of the immune response and to sequentially assess the stages of immunoreactivity. The nature of the T cell repetoires responsible for resistance or the regulation of pathology has been quantitated. (author). 12 refs, 5 figs.

7690 (IAEA-TECDOC–613, pp. 51-67) **Application of radionuclide techniques in the characterization of antigens for vaccine development against the human malaria parasite Plasmodium falciparum.** Ramasamy, R. (Queensland Inst. of Medical Research, Brisbane (Australia)); Ramasamy, M.S. International Atomic Energy Agency, Vienna (Austria). Jul 1991. (CONF-881150–: IAEA seminar for Asia and the Pacific on nuclear techniques in communicable and parasitic infections, Bombay (India), 21-25 Nov 1988). In *Nuclear and related techniques in the control of communicable diseases: Proceedings of regional seminars held in Bombay, India, 21-25 November 1988 and Belo Horizonte, Brazil, 30 October - 3 November 1989.* 194p. Order Number DE92613626. Source: OSTI; NTIS (US Sales Only); INIS.

The development of molecular vaccines against the human malaria parasite Plasmodium falciparum requires the characterization of putative protective antigens. The characterization and structural analyses of the small amounts of antigens present in the parasite is made possible by the use of radiolabelled amino acids, monosaccharides and lipids. Parasite proliferation assays, used to identify antibodies that inhibit parasite growth in vitro, utilize radiolabelled hypoxanthine. The determination of T cell epitopes is dependent on measuring lymphocyte proliferation with radiolabelled thymidine. Radiolabelled antibodies are routinely used in Western blots and epitope analysis. The use of these techniques is illustrated in the characterization of two new merozoite surface antigens. (author). 40 refs, 11 figs.

7691 (IAEA-TECDOC–613, pp. 33-35) **Recent advances in DNA technology for communicable diseases.** Siqueira, A.M. (Universidade Federal de Minas Gerais, Belo Horizonte (Brazil). Advances in DNA technology have benefitted every area of biological research in the past several years. A wide variety of new techniques are being developed that will enable researchers to address old and unsolved problems. The polymerase-catalyzed chain reaction (PCR) and the exponential replication of recombinant-RNA hybridization probes using the RNA Replicase of the bacteriophage QB are two of these techniques. Both methods offer powerful means of amplifying specific nucleic acid sequences and can render it possible to perform tasks which will be very useful in studies related to communicable diseases. Among such applications is the development of extremely sensitive molecular reagents for diagnosis of infectious agents. (author). 10 refs.

7692 (IAEA-TECDOC–613, pp. 99-105) **Use of immunoradiometric assays employing monoclonal antibodies or synthetic peptides for the study of malaria transmission and immunity in migrant population of endemic areas in the Amazon Basin.** Oliveira Ferreira, J. (Oswaldo Cruz Inst., Rio de Janeiro (Brazil). Dept. of Immunology); Ribeiro, C.D.; Lourenco Oliveira, R. de; Deane, L.M.; Paiva, A.C.M. International Atomic Energy Agency, Vienna (Austria). Jul 1991. (CONF-8910558–: IAEA seminar for Latin America on nuclear techniques in parasitic and communicable diseases, Belo Horizonte (Brazil), 30 Oct - 3 nov 1989). In *Nuclear and related techniques in the control of communicable diseases: Proceedings of regional seminars held in Bombay, India, 21-25 November 1988 and Belo Horizonte, Brazil, 30 October - 3 November 1989.* 194p. Order Number DE92613626. Source: OSTI; NTIS (US Sales Only); INIS.

Immunoradiometric assays (IRMA) and immunofluorence tests were used in combination with entomological techniques to study malaria epidemiology in areas in the Amazon Basin where non-immune migrant individuals have settled in recent years. Anopheles darlingi was found to be the most important vector accounting for 77% of the anophelines positive for sporozoites by the IRMA. The prevalence of anti-sporozoite and anti-blood stage antibodies was low and decreased with time after the last episode of malaria. Anti-sporozoite antibodies did not indicate immune status of the individual but may reflect malaria transmission. (author). 9 refs, 4 tabs.

7693 (IAEA-TECDOC–613, pp. 157-162) **A study of the blood brain barrier and an evaluation of demyelination in tuberculous meningitis.** Samuel, A.M. (Bhabha Atomic Research Centre, Bombay (India). Radiation Medicine Centre); Dhalla, A.S.; Mazarello, T.B. International Atomic Energy Agency, Vienna (Austria). Jul 1991. (CONF-881150–: IAEA seminar for Asia and the Pacific on nuclear techniques in communicable and parasitic infections, Bombay (India), 21-25 Nov 1988). In *Nuclear and related techniques in the control of communicable diseases: Proceedings of regional seminars held in Bombay, India, 21-25 November 1988 and Belo Horizonte, Brazil, 30 October - 3 November 1989.* 194p. Order Number DE92613626. Source: OSTI; NTIS (US Sales Only); INIS.

The blood brain barrier (BBB) plays an important role in the regulation of homeostasis of the CNS. The effect of tuberculous meningitis (TBM) on the BBB was studied using a ratio of serum albumin-CSF albumin levels. During the acute stage of meningitis 80% of the patients had moderate to severe disturbances in the BBB that persisted 1 to 3 months post therapy. Neurological damage was assessed using Myelin Basic Protein (CBP) as marker. Over 62% of patients with TBM had a significantly high level of MBP. (author). 19 refs, 5 tabs.

7694 (IAEA-TECDOC–613, pp. 163-170) **Murine T-lymphocyte activation by mycobacterial antigens.** Hussong, D. (United States Food and Drug Administration, Bethesda, MD (United States). Center for Biologics Evaluation and Review); Malik, A.; Morris, S.; Chaparas, S.D. International Atomic Energy Agency, Vienna (Austria). Jul 1991. (CONF-881150–: IAEA seminar for Asia and the Pacific on nuclear techniques in communicable and parasitic infections, Bombay (India), 21-25 Nov 1988). In *Nuclear and related techniques in the control of communicable diseases: Proceedings of regional seminars held in Bombay, India, 21-25 November 1988 and Belo Horizonte, Brazil, 30 October - 3 November 1989.* 194p. Order Number DE92613626. Source: OSTI; NTIS (US Sales Only); INIS.

There has been renewed interest in the diagnosis of tuberculosis and other mycobacterial infections in the United States. Effective immunity to mycobacterial infections, as well as diagnosis by the skin test, involves T-cells rather than antibodies. Studies currently underway use the new technologies of monoclonal antibodies and recombinant DNA to define better mycobacterial antigens for T-cell activation, in the hope of identifying species specific antigens. Lymph node cells from mice sensitized to Mycobacterium intracellulare and Mycobacterium avium were assayed for activation by mycobacterial fractions, and cell lines and clones were generated. Comparing BALB/c and B10 mice indicated better responses to M. avium sonicate by B10 mice. A recombinant gene product containing a M. intracellulare peptide was assayed with lymph node cells and indicated excellent T-cell stimulation in BALB/c lymph node cells and cell lines. However, assays using B10 T-cell clones have yet to detect responders to the recombinant protein. Future studies using synthetic epitopes produced by recombinant DNA techniques and defined by monoclonal antibodies are necessary for the identification of reactive T-cell epitopes that are potentially species specific. 4 refs, 7 figs, 1 tab.

7695 (IAEA-TECDOC–613, pp. 171-181) **Use of radionuclide tracers in pharmacokinetic studies of antimalarial compounds.** Jamaludin, A. (National Drug Research Centre, Pinang (Malaysia)); Navaratnam, V. International Atomic Energy Agency, Vienna (Austria). Jul 1991. (CONF-881150–: IAEA seminar for Asia and the Pacific on nuclear techniques in communicable and parasitic infections, Bombay (India), 21-25 Nov 1988). In *Nuclear and related techniques in the control of communicable diseases: Proceedings of regional seminars held in Bombay, India, 21-25 November 1988 and Belo Horizonte, Brazil, 30 October - 3 November 1989.* 194p. Order Number DE92613626. Source: OSTI; NTIS (US Sales Only); INIS.

To conduct pharmacokinetic and metabolic studies, there is a need for the development of sensitive analytical methods. The analytical methods frequently used to analyse antimalarials are High Performance Liquid Chromatography, Gas Chromatography and Thin-Layer Chromatography. However, in vivo studies that need more specific and sensitive methods to measure major metabolites present in the blood or urine require the use of ^{14}C- or ^{3}H-labelled compounds. The parent drug may be so extensively biotransformed that the amount of intact drug may be well below the sensitivity limits of the chemical assay methods available. It is therefore crucial for new antimalarials that in vitro biotransformations by microsomal enzyme preparations and/or in vivo studies using labelled compounds be run in parallel with chemical assay developments. In the case of primaquine, extensive metabolic information was obtained when radiolabelled compounds were used in studies of the metabolism of this compound in mammals. The distribution of primaquine in rat tissues was determined by the use of ^{14}C-labelled primaquine diphosphate. Other pharmacokinetic parameters were obtained when HPLC methods were used to measure primaquine in blood. 6 refs, 3 figs, 3 tabs.

7696 (INIS-BR–2848) **Some effects of gamma radiation in Callosobruchus maculatus (Fabr., 1792) (Coleoptera, Bruchidae).** Walder, J.M.M. Sao Paulo Univ., Piracicaba, SP (Brazil). Escola Superior de Agricultura Luiz de Queiroz. 1974 74p. (In Portuguese). Order Number DE92613552. Source: OSTI; NTIS (US Sales Only); INIS.

The effect of gamma irradiation from a Cobalt-60 source on Callosobruchus maculatus (Fabr.) was studied in this work. Experiments showed that at a dose-rate of 9820 ± 300 rad/hour the LD sub(100) of egg embryos was 2,2 krad, of larvae 3 krad and of pupae 22,8 krad. Total sterilization of adults irradiated of the pupal stage was 5 krad. The sterilizing dose of irradiated adults was 8 krad at a calculated dose-rate of 57.630 ± 5000 rad/hour, whereas the LD sub(100) was 330 krad at a dose-rate of 63650 ± 1500 rad/hour. It was further verified that the number of eggs laid decreased with the irradiation dose. Longevity tended by increase in the females and diminish in the males as a result of irradiation. (author).

7697 (INIS-BR–2850) **Comparative study of native and irradiated crotoxin. Biochemical and pharmacological effects.** Nascimento, N. do. Instituto de Pesquisas Energeticas e Nucleares (IPEN), Sao Paulo, SP (Brazil). 1991 69p. (In Portuguese). Order Number DE92613593. Source: OSTI; NTIS (US Sales Only); INIS.

Ionizing radiation is able to detoxify several venoms, including snake venom, without affecting significantly their antigenic and immunogenic properties. In order to elucidate this phenomena, we conceived a comparative biochemical and pharmacological study between native and gamma irradiated (2000Gy) crotoxin, main toxin of south american rattlesnake Crotalus durissus terrificus. Crotoxin was isolated and purified from crude venom by molecular exclusion chromatography, pI precipitation and then irradiated. Immunodiffusion, electrophoresis and gel filtration showed that the molecular integrity was preserved after irradiation with some higher molecular weight aggregate formation and maintenance of its antigenic capacity. The antibodies induced by irradiated toxin had a similar titer to the antibodies induced by native crotoxin; however with higher protective effects in mice. Crotoxin toxicity became 15 times lower after irradiation, as determined by LD sub(50) in mice. Native and irradiated crotoxin biodistribution occurred with a similar general pattern, with renal elimination. In contrast to irradiated crotoxin, the native crotoxin is initially retained in kidneys. A later concentration (2-3hs) occurs in phagocyticmononuclear cells rich organs (liver and spleen) and neural junctions rich organs (muscle and brain). (author).

7698 (INIS-BR–2856) **The influence of gamma radiation rate over the radiosensitivity of five class of insects.** Domarco, R.E. Sao Paulo Univ., Piracicaba, SP (Brazil). Escola Superior de Agricultura Luiz de Queiroz. 1977 76p. (In Portuguese). Order Number DE92613553. Source: OSTI; NTIS (US Sales Only); INIS.

This paper was aimed at studying the influence of gamma rays dose rate over the radiosensitivity of Sitophilus oryzae (L.), S. zeamais Mots., Rhyzopertha dominica (F.), Zabrotes subfasciatus (Boh.) and Ceratitis capitata Wied. From the results obtained it can be observed that: a) When adults of S. oryzae and S. zeamais were irradiated with either very low dose rates (35, 63, 154 and 632 rad/hour) or very high dose rates (59,580 rad/hour) they showed an increase in their life expectancies, which decreased under intermediate dose rates (2,750 and 15,750 rad/hour). With R. dominica, however, there was continued decrease in life expectancy as the dose rate increased. b) There was a higher emergence of larvae of C. capitata when the eggs were irradiated with low dose rates (1.7, 6.8, 10.9 and 43.9 krad/hour) and with high dose rates (1,577 and 3,759 krad/hour), while the intermediate dose rates (131,330 and 654 krad/hour) were more effective towards causing egg mortality. c) When adults of Z. subfasciatus were irradiated with low dose rates (1.6, 6.7 and 10.8 krad/hour) they underwent a small alteration in life expectancy, mainly for the male insects, while higher dose rates (43.3 krad/hour or more) did not have any influence. (author).

7699 (INIS-BR–2860) **Effects of irradiated diet on longevity and prolificity of successive generations of Zabrotes subfasciatus (Boheman, 1833) (Coleoptera, Bruchidae).** Domarco, R.E. Sao Paulo Univ., Piracicaba, SP (Brazil). Escola Superior de Agricultura Luiz de Queiroz. 1981 78p. (In Portuguese). Order Number DE92614950. Source: OSTI; NTIS (US Sales Only); INIS.

The study was done in the laboratory of Entomology of the Centro de Energia Nuclear na Agricultura (CENA), University of Sao Paulo, in Piracicaba, State of Sao Paulo, Brazil. This research was carried out to observe the effect of irradiated beans (Phaseolus vulgaris, (L.), cultivar Rosinha) on the longevity and prolificity of Zabrotes subfasciatus (Boheman, 1833) (Coleoptera, Bruchidae). The first part of the study included the rearing of five generations of Zabrotes subfasciatus which were fed with irradiated beans (0, 10, 20, 100 e 200 krad, with a dose rate of approximately 70 krad/h). The second one consisted of growth of seven generations on irradiated beans (0, 100, 500, 1500 and 3000 krad, with a dose rate of approximately 70 krad/h). The data were obtained through daily countings of insect birth and death rates. It was concluded that irradiation modified the nutritional quality of beans, affecting the development of Zabrotes subfasciatus. This effect was studied through the longevity and prolificity, which were altered as compared with the control, once they were higher for the dosis of 1500 and 3000 krad. (author).

7700 (INIS-BR–2861) **Gamma radiation effects in Sitophilus oryzae (Linne, 1763) (Coleoptera, Curculionidae).** Pacheco, J.M. Sao Paulo Univ., Piracicaba, SP (Brazil). Escola Superior de Agricultura Luiz de Queiroz. 1973 82p. (In Portuguese). Order Number DE92613554. Source: OSTI; NTIS (US Sales Only); INIS.

Lethal effects were studied for the egg, larval and pupal stages as well as sterilization of adults of Sitophilus oryzae (L.) by the application of gamma radiation. Irradiation of pupae with an estimated dosis of 7887 ± 158 rad inhibits adult emergency. Hypotheses have been suggested that the apparent density and (or) nutrient value of food substrates decisively influence the sterilizing dosis for this insect. Thus, in rice and maize which are apparently denser and (or) of higher nutrient value than maccaroni, insects are sterilized by a dosis of 7 krad, while in maccaroni the sterilizing dosis decreases to 5 krad. (author).

Hard copies are available from Joint FAO/IAEA Div. of Nuclear Techniques in Food and Agriculture.

This newsletter contains brief summaries of three coordinated research meetings held in 1991: irradiation in combination with other processes for improving food quality; application of irradiation technique for food processing in Africa; and food irradiation programme for Middle East and European countries. The first Workshop on Public Information on Food Irradiation is summarized, and a Coordinated Research Programme on Irradiation as a Quarantine Treatment of Mites, Nematodes and Insects other than Fruit Fly is announced. This issue also contains a report on the status of food irradiation in China, and a supplement lists clearances of irradiated foods. Tabs.

7721 (INIS-mf–13048) **Facts about food irradiation: Status and trends.** ICGFI fact series. International Consultative Group on Food Irradiation (ICGFI). Food and Agriculture Organization of the United Nations, Rome (Italy); World Health Organization, Geneva (Switzerland); International Atomic Energy Agency, Vienna (Austria). May 1991 2p. Order Number DE92613572. Source: OSTI; NTIS (US Sales Only); INIS.

This fact sheet introduces the concept of irradiating food to reduce post-harvest losses from infestation, contamination and spoilage, to lower the incidence of foodborne diseases and to assist international trade in food products by offering an alternative to fumigation or some other treatments that may not be acceptable to the importing countries.

7722 (INIS-mf–13049) **Facts about food irradiation: Scientific and technical terms.** ICGFI fact series. International Consultative Group on Food Irradiation (ICGFI). Food and Agriculture Organization of the United Nations, Rome (Italy); World Health Organization, Geneva (Switzerland); International Atomic Energy Agency, Vienna (Austria). May 1991 2p. Order Number DE92613573. Source: OSTI; NTIS (US Sales Only); INIS.

This fact sheet explains the scientific and technical terms used in describing food irradiation processes.

7723 (INIS-mf–13050) **Facts about food irradiation: Food irradiation and radioactivity.** ICGFI fact series. International Consultative Group on Food Irradiation (ICGFI). Food and Agriculture Organization of the United Nations, Rome (Italy); World Health Organization, Geneva (Switzerland); International Atomic Energy Agency, Vienna (Austria). May 1991 2p. Order Number DE92613574. Source: OSTI; NTIS (US Sales Only); INIS.

This fact sheet addresses the issue of whether food irradiation makes food radioactive and explains the difference between "irradiation food" and "radioactive food". 4 refs.

7724 (INIS-mf–13051) **Facts about food irradiation: Chemical changes in irradiated foods.** ICGFI fact series. International Consultative Group on Food Irradiation (ICGFI). Food and Agriculture Organization of the United Nations, Rome (Italy); World Health Organization, Geneva (Switzerland); International Atomic Energy Agency, Vienna (Austria). May 1991 2p. Order Number DE92613575. Source: OSTI; NTIS (US Sales Only); INIS.

This fact sheet addresses the safety of irradiated food. The irradiation process produces very little chemical change in food, and laboratory experiments have shown no harmful effects in animals fed with irradiated milk powder. 3 refs.

7725 (INIS-mf–13052) **Facts about food irradiation: Nutritional quality of irradiated foods.** ICGFI fact series. International Consultative Group on Food Irradiation (ICGFI). Food and Agriculture Organization of the United Nations, Rome (Italy); World Health

Organization, Geneva (Switzerland); International Atomic Energy Agency, Vienna (Austria). May 1991 2p. Order Number DE92613576. Source: OSTI; NTIS (US Sales Only); INIS.

This fact sheet briefly considers the nutritional value of irradiated foods. Micronutrients, especially vitamins, are sensitive to any food processing method, but irradiation does not cause any special nutritional problems in food. 4 refs.

7726 (INIS-mf--13053) **Facts about food irradiation: Genetic studies.** ICGFI fact series. International Consultative Group on Food Irradiation (ICGFI). Food and Agriculture Organization of the United Nations, Rome (Italy); World Health Organization, Geneva (Switzerland); International Atomic Energy Agency, Vienna (Austria). May 1991 4p. Order Number DE92613577. Source: OSTI; NTIS (US Sales Only); INIS.

Results published in the mid-1970s from the National Institute of Nutrition (NIN) in India showed increased numbers of polyploid cells in rats, mice, monkeys and malnourished children fed irradiated wheat products. This fact sheet considers the validity of these results. A large number of independent studies have been subsequently performed, and in none of these have results been obtained that support the NIN findings. The conclusion is that there is no evidence to link the consumption of irradiated food with any mutagenic effect. 3 refs.

7727 (INIS-mf--13054) **Facts about food irradiation: Microbiological safety of irradiated food.** ICGFI fact series. International Consultative Group on Food Irradiation (ICGFI). Food and Agriculture Organization of the United Nations, Rome (Italy); World Health Organization, Geneva (Switzerland); International Atomic Energy Agency, Vienna (Austria). May 1991 4p. Order Number DE92613578. Source: OSTI; NTIS (US Sales Only); INIS.

This fact sheet considers the microbiological safety of irradiated food, with especial reference to Clostridium botulinum. Irradiated food, as food treated by any "sub-sterilizing" process, must be handled, packaged and stored following good manufacturing practices to prevent growth and toxin production of C. botulinum. Food irradiation does not lead to increased microbiological hazards, nor can it be used to save already spoiled foods. 4 refs.

7728 (INIS-mf--13055) **Facts about food irradiation: Irradiation and food safety.** ICGFI fact series. International Consultative Group on Food Irradiation (ICGFI). Food and Agriculture Organization of the United Nations, Rome (Italy); World Health Organization, Geneva (Switzerland); International Atomic Energy Agency, Vienna (Austria). May 1991 2p. Order Number DE92613579. Source: OSTI; NTIS (US Sales Only); INIS.

This fact sheet focusses on the question of whether irradiation can be used to make spoiled food good. No food processing procedures can substitute for good hygienic practices, and good manufacturing practices must be followed in the preparation of food whether or not the food is intended for further processing by irradiation or any other means. 3 refs.

7729 (INIS-mf--13056) **Facts about food irradiation: Irradiation and food additives and residues.** ICGFI fact series. International Consultative Group on Food Irradiation (ICGFI). Food and Agriculture Organization of the United Nations, Rome (Italy); World Health Organization, Geneva (Switzerland); International Atomic Energy Agency, Vienna (Austria). May 1991 2p. Order Number DE92613580. Source: OSTI; NTIS (US Sales Only); INIS.

This fact sheet considers the issue of the irradiation of food containing food additives or pesticide residues. The conclusion is that there is no health hazard posed by radiolytic products of pesticides or food additives. 1 ref.

7730 (INIS-mf--13057) **Facts about food irradiation: Packaging of irradiated foods.** ICGFI fact series. International Consultative Group on Food Irradiation (ICGFI). Food and Agriculture Organization of the United Nations, Rome (Italy); World Health Organization, Geneva (Switzerland); International Atomic Energy Agency, Vienna (Austria). May 1991 2p. Order Number DE92613581. Source: OSTI; NTIS (US Sales Only); INIS.

This fact sheet considers the effects on packaging materials of food irradiation. Extensive research has shown that almost all commonly used food packaging materials toted are suitable for use. Furthermore, many packaging materials are themselves routinely sterilized by irradiation before being used. 2 refs.

7731 (INIS-mf--13059) **Facts about food irradiation: Controlling the process.** ICGFI fact series. International Consultative Group on Food Irradiation (ICGFI). Food and Agriculture Organization of the United Nations, Rome (Italy); World Health Organization, Geneva (Switzerland); International Atomic Energy Agency, Vienna (Austria). May 1991 4p. Order Number DE92614091. Source: OSTI; NTIS (US Sales Only); INIS.

This fact sheet briefly reviews the procedures that exist to control the process of food irradiation. It also summarizes the difficulties in identifying irradiated food, which stem from the fact that irradiation does not physically change the food or cause significant chemical changes in foods. 4 refs.

7732 (INIS-mf--13060) **Facts about food irradiation: Food irradiation costs.** ICGFI fact series. International Consultative Group on Food Irradiation (ICGFI). Food and Agriculture Organization of the United Nations, Rome (Italy); World Health Organization, Geneva (Switzerland); International Atomic Energy Agency, Vienna (Austria). May 1991 2p. Order Number DE92613582. Source: OSTI; NTIS (US Sales Only); INIS.

This fact sheet gives the cost of a typical food irradiation facility (US $1 million to US $3 million) and of the food irradiation process (US $10-15 per tonne for low-dose applications; US $100-250 per tonne for high-dose applications). These treatments also bring consumer benefits in terms of availability, storage life and improved hygiene. 2 refs.

7733 (INIS-mf--13061) **Facts about food irradiation: Irradiated foods and the consumer.** ICGFI fact series. International Consultative Group on Food Irradiation (ICGFI). Food and Agriculture Organization of the United Nations, Rome (Italy); World Health Organization, Geneva (Switzerland); International Atomic Energy Agency, Vienna (Austria). May 1991 4p. Order Number DE92613583. Source: OSTI; NTIS (US Sales Only); INIS.

This fact sheet discusses market testing of irradiate food, consumer response to irradiated products has always been positive, and in some countries commercial quantities of some irradiated food items have been sold on a regular basis. Consumers have shown no reluctance to buy irradiated food products. 4 refs.

7734 (KAERI/RR--976/90) **Application of irradiation techniques to food and foodstuffs.** Kwon, Joong Ho (Korea Atomic Energy Research Inst., Daeduk (Korea, Republic of)); Byun, Myung Woo; Kim, Suc Won; Yang, Jae Seung; Cho, Han Ok. Korea Atomic Energy Research Inst., Daeduk (Korea, Republic of). Feb 1991. 97p. (In Korean). Order Number DE92614952. Source: OSTI; NTIS (US Sales Only); INIS.

A preservation study of dried fish, anchovies, has been conducted to determine the effect of gamma irradiation and laminated(nylon/polyethylene) film packaging on microbiological, physicochemical and organoleptic qualities of stored samples under room, refrigeration and freezing temperatures. Irradiation at less than 5 kGy and NY/PE-laminated film packaging are anticipated to be significantly effective for over 10 months in terms of improving the hygienic quality and extending the storage life of boiled-dried anchovies. In a survey participating 700 consumers, respondents preferred irradiated food to chemically-treated one. However, majority of respondents (55.7 %) was ignorant of the fact that the Korean government and international organizations concerned have approved the wholesomeness of irradiated food. Insufficiency of public information and understanding for irradiated food was indicated as a major cause for retardation of commercial utilization of food irradiation technology. In a response concerning perception and acceptance toward irradiated food, there was a significant difference between radiation worker and the general public. (Author).

7735 (KURRI-TR--350, pp. 69-76) **The use of nuclear reactor in radiation biology.** Ujeno, Yowri (Kyoto Univ., Kumatori, Osaka (Japan). Research Reactor Inst.). Kyoto Univ., Kumatori, Osaka (Japan). Research Reactor Inst. Jun 1991. (In Japanese). (CONF-9102139--: Symposium on 'radiation research in life science', Kumatori (Japan), 26-28 Feb 1991). In *Proceedings of the symposium on 'radiation research in life science': Brain damage* *and heritable damage*. 135p. Order Number DE92713959. Source: OSTI; NTIS (US Sales Only); INIS.

The Kyoto University Reactor (KUR) is widely used not only in biology, but also in applied biology, today. These studies were surveyed in the present paper and the future possibility to use KUR in radiation biology was discussed. The researches on the effects of thermal neutrons on various normal tissues, the biological effects of neutrons except thermal neutrons, especially intermediate neutrons between thermal and high speed neutrons or cold neutrons, the adaptive response of cells to thermal neutron radiation, the application of nuclear reactor-produced radionuclides including ^{195m}Pt to biology, and the mutation in botanical science and so on, should be continued using nuclear reactor. The necessity of nuclear reactor in biology and applied biology is emphasized. (author).

7736 (KURRI-TR-352) **Papers presented at the intensive seminar on 'tree rings'.** Noda, Masato (ed.). Kyoto Univ., Kumatori, Osaka (Japan). Research Reactor Inst. Jun 1991. 61p. (In Japanese). (CONF-9009462-: 4. intensive seminar on 'tree rings', Tomakomai (Japan), 3-5 Sep 1990). Order Number DE92751061. Source: OSTI; NTIS (US Sales Only); INIS.

The fourth study meeting 'Tree growth rings' was held in Tomakomai Experimental Plantation attached to the Department of Agriculture, Hokkaido University, different from what it used to be. Though the attendance and the papers presented were not many because of the distance and the improper timing, it was very delightful that the meeting became an earnest gathering. In this report, seven papers presented at the meeting are collected. (K.I.).

The speeches by the Federal Minister for the Environment and the gentlemen in charge of the Bundesamt fuer Strahlenschutz provide information on the perceived tasks of the Bundesamt: the principles of radiation protection, implementation of the new ICRP recommendations, the formation of the radiation protection register, cooperation on the amendment of the nuclear law with regard to disposal - terminal storage area Konrad, terminal storage project Gorleben, terminal storage area Moosleben. (HSCH).

7738 (BfS-ISH-151/91) **Usefulness and reliability of available epidemiological study results in assessments of radiation-related risks of cancer. Pt. 4. Radiation-related risk of cancer of the thyroid.** Martignoni, K. (Bundesamt fuer Strahlenschutz, Neuherberg (Germany). Inst. fuer Strahlenhygiene); Elsasser, U. Bundesamt fuer Strahlenschutz, Salzgitter (Germany); Bundesministerium fuer Umwelt, Naturschutz und Reaktorsicherheit, Bonn (Germany). May 1990. 102p. (In German). Contract BMU St.Sch. 960. Order Number DE92750160. Source: OSTI; NTIS (US Sales Only); INIS.

Carcinomas occurring in the thyroid gland as a result of radiation generally affect the papillary and, to a slightly lesser extent, follicular parts of this organ, while the available body of evidence hardly gives any indications of anaplastic and medullary neoplasms. Radiation has, however, mostly been associated with multicentric tumours. Among the survivors of the nuclear assaults on Hiroshima and Nagasaki, there are no known cases of anaplastic carcinomas of the thyroid. The papillary carcinoma, which is the prevailing type of neoplasm after radiation exposure, has less malignant potential than the follicular one and is encountered in all age groups. Malignant carcinomas of the thyroid are predominantly found in the middle and high age groups. It was calculated that high Gy doses and dose efficiencies are associated in children with a risk coefficient of 2.5 in 10^4 person-years. This rate is only half as high for adults. Studies performed on relevant cohorts point to latency periods of at least five years. Individuals exposed to radiation are believed to be at a forty-year or even life-long risk of developing cancer. The cancer risk can best be described on the basis of a linear dose-effect relationship. The mortality rate calculated for cancer of the thyroid amounts to approx. 10% of the morbidity rate. The carcinogenic potential of iodine-131 in the thyroid is only one-third as great as that associated with external radiation of high dose efficiency. (orig./MG).

7739 (CNIC-00408) **Study on the abnormalities in sperm and gene mutation induced by retention of ^{147}Pm in testis.** Zhu Shoupeng (Suzhou Medical Coll., JS (China)); Lun Mingyue; Yang Shuqin. China Nuclear Information Centre, Beijing, BJ (China). May 1990. 7p. (In Chinese). (SMC-0044.). Order Number DE92613543. Source: OSTI; NTIS (US Sales Only); INIS.

The purpose of the present study is to ascertain ^{147}Pm retention in testis and its radiogenotoxicological effects of gene mutation through varying radioactivities of internal exposure. Especially the accumulation of ^{147}Pm in testis induces the dominant lethal, dominant skeletal mutation and abnormalities in sperm. Studies indicated that the cumulative absorption dose in testis increases as the internal exposure of ^{147}Pm increases. The internal exposure of ^{147}Pm can destroy the genetic materials and raise the rates of dominant lethal and dominant mutation of skeletal abnormalities in the offspring. The relationship between the rate of dominant skeletal mutation (B) and accumulated radioactivities of ^{147}Pm (D) in testis can be described by a linear equation that is B 20.68 + 35.48 D. The relationship between abnormalities of the sperm and the cumulative dose from ^{147}Pm in testis can be expressed by the following equation: $S = 10.8705 D^{0.5224} + 3.1768$.

7740 (CNIC-00415) **Investigation and evaluation of total radioactivities and the radioactive nuclides of ^{131}I, $^{134.137}$Cs in the food and environment in Suzhou city.** Fu Rongchu (Suzhou Medical Coll., JS (China)); Wang Huiyu; Lu Ming. China Nuclear Information Centre, Beijing, BJ (China). Sep 1990. 5p. (In Chinese). (SMC-0045.). Order Number DE92613544. Source: OSTI; NTIS (US Sales Only); INIS.

The total radioactivities, ^{131}I and ^{134,137}Cs contents in the food and environmental samples in Suzhou city were investigated. The results of the investigation are as follows: (1) In the food, the total alpha is 0.29≈37 Bq/kg(L), the total beta 0.67≈597 Bq/kg(L), the total ^{131}I and ^{134,137}Cs 0.01≈0.1 Bq/kg(L); (2) In the water, the total alpha is 10^{-2} Bq/L, the total beta 10^{-1} Bq/L, the ^{134,137}Cs is 10^{-4} Bq/L. In the melted snow water, the ^{134,137}Cs is as high as 10^{-2} Bq/L; (3) In the surface air, the total alpha is 10^{-4} Bq/m^3, the total beta 10^{-3} Bq/m^3, the $^{134.137}$Cs is 1.98×10^{-4} Bq/m^3, but this value was as high as 8.3×10^{-3} Bq/m^3 after three weeks of Chernobyl accident. The maximum annual effective dose equivalent to resident (adult) caused by ingesting the food and inhaling the air is 9.27×10^{-7} Sv/a and the collective effective dose equivalent is 0.36 man-Sv/a.

7741 (CNIC-00429) **Placental and lactating transfer of ^{147}Pm in mice.** Tao Feng (Suzhou Medical Coll., JS (China)); Zhu Shoupeng. China Nuclear Information Centre, Beijing, BJ (China). Aug 1990. 6p. (In Chinese). (SMC-0046.). Order Number DE92613545. Source: OSTI; NTIS (US Sales Only); INIS.

The placental and lactating transfer of ^{147}Pm in late pregnant mice and lactating mice as well as the distribution of ^{147}Pm in some organs of mother mice were studied and compared. The pregnant mice and lactating mice had intravenous injection with ^{147}Pm nitrate at the 17th day of gestation and the next day of parturition respectively. The two groups were sacrified at the 1st, 4th, 9th, 14th and 21st day after the injection. The retentions of ^{147}Pm in the liver, right femur, uterus, spleen, placenta, fetal membrane and litter were determined by the method of liquid scintillation. The results showed that the amount of ^{147}Pm in litters of both groups was increasing with the days after injection. In the 1st and 4th day of injection the amount of ^{147}Pm in litters of lactating mice was 20 times higher than those in litters of pregnant mice. The amount of ^{147}Pm in livers and skeletons and the half-retention time of prenant and lactating dams were much greater than those of control group.

7742 (CNIC–00433) **Comparative study of internal contamination of different radiators in skeleton on induction of mutagenic effect in bone marrow cells.** Zhu Shoupeng (Suzhou Medical Coll., JS (China)); Wang Liuyi; Yang Weidong. China Nuclear Information Centre, Beijing, BJ (China). Oct 1990. 9p. (In Chinese). (SMC–0047.). Order Number DE92613546. Source: OSTI; NTIS (US Sales Only); INIS.

The purpose of the present study was to ascertain comparative retention of ^{134}Cs or ^{147}Pm in skeleton on induction of chromosome aberrations and PCE's micronucleus formation in bone marrow cells. Results indicated that after iv signal nuclide ^{134}Cs, through 7 weeks observation, the retention data in skeleton could be well described by an exponential expression. Experiments indicated that the retention value and the absorption dose of ^{147}Pm in skeleton were significantly higher in comparison with ^{134}Cs. Both internal contamination of ^{134}Cs or ^{147}Pm could induce chromosome aberrations and PCE's micronucleus formation in bone marrow cells. Among the type of chromosome aberrations of bone marrow cells induced by ^{134}Cs or ^{147}Pm included gap, chromatid breakage, chromosome breakage and translocation. Moreover, the chromosome aberration rates were elevated when the intake of radioactivity of ^{134}Cs or ^{147}Pm were enlarged. At the same time, chromosome fragment of bone marrow cells also induced by ^{134}Cs or ^{147}Pm only through high radioactive contamination. Studies showed that chromosome translocation was appeared only through high radioactivity of ^{147}Pm contamination. By comparing with ^{1}'4^{7}Pm, however, the induction of chromosome aberrations and PCE's micronucleus formation rates on bone marrow cells induced by ^{134}Cs was quite low.

7743 (CNIC–00440) **Studies on the translocation and distribution characteristics of carbon assimilates in blackberry.** Wang Shuyu (Northeast Agricultural College, Harbin, HL (China)); Liu Hongjia. China Nuclear Information Centre, Beijing, BJ (China). Aug 1990. 20p. (In Chinese). (CSNAS–0036.). Order Number DE92613547. Source: OSTI; NTIS (US Sales Only); INIS.

The translocation and distribution characteristics of carbon assimilates were studied with the method of $^{14}CO_2$ feeding. The results indicated that there were different translocation and distribution characteristics of carbon assimilates among the upper, middle and lower leaves in a shoot during annual cycle. Taking away leaves, sun-shading and drought could raise the exporting ratio of carbon assimilates in the feeding leaves and could change the distributing model of the tree. Most of the carbon assimilates were translocated to basic born branch after sun-shading and drought.

7744 (CONF-901274–2) **On the cells of origin of radiogenic thyroid cancer: New studies based on an old idea.** Clifton, K.H.; Domann, F.E.; Groch, K.M. Wisconsin Univ., Madison, WI (United States). Dept. of Human Oncology. [1990]. 27p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-87ER60507. From International symposium on radiation carcinogenesis in the whole-body system; Tokyo (Japan); 5-6 Dec 1990. Order Number DE92004031. Source: OSTI; NTIS; INIS; GPO Dep.

We have presented evidence that the functional thyroid follicles (follicular units, FU) which are formed in grafts of monodispersed rat thyroid cells, and hence the thyroid tumors which later develop in such grafts, are clonal in origin. Recent studies have been designed to investigate: whether cell number-dependent inhibition of promotion-progression is mediated by remote hormonal feed-back, local cell-cell interactions, or both; the cell population kinetics of the clonogen subpopulation during goitrogenesis and goiter involution; and the effect of prolonged exposure to high levels of TSH (thyrotropin) on the capacity of the clonogens to give rise to functional FU. The results indicate that local cell-cell interactions play an important role in the cell number-dependent suppression of neoplastic promotion-progression. They also show that if sufficient thyroid cells are grafted, the thyroid-pituitary axis can be reestablished in thyroidectomized rats fed normal diets. In such animals given iodine deficient diets, the FU that develop in the thyroid grafts shift their secretory pattern to increase the ratio of T3 (triiodothyronine) to T4 (thyroxine), and thus conserve the available iodine. Finally, the clonogenic subpopulation is conserved during both goitrogenesis and goiter involution. When they are transplanted to thyroidectomized recipients, clonogens from two types of goiters form FU that are morphologically indistinguishable from those that develop in grafts of normal thyroid clonogens. Furthermore, the secretion of T3 and T4 by such grafts is dependent on the grafted clonogen number, and hence FU formation, and not on the total number of thyroid cells transplanted. We conclude that the thyroid clonogens, the presumptive cancer progenitor cells, have many of the characteristics of stem cells.

7745 (DOE/ER/60429–T1) **The molecular basis for uv response of cultured human cells.** Karin, M. California Univ., San Diego, La Jolla, CA (United States). [1991]. 4p. Sponsored by U.S. DOE Energy Research. DOE Contract FG03-86ER60429. Order Number DE92003766. Source: OSTI; NTIS; GPO Dep.

During the past year we have analyzed the mechanism by which UV and H_2O_2 increase the activity of AP-1 in HeLa cells. AP-1 is a dimeric protein complex composed of the fos and jun gene products. After UV irradiation of HeLa cells (or exposure to H_2O_2) expression of the c-jun gene rapidly increases at least 50-fold. This induction occurs through the previously identified AP-1 site in the c-jun promoter. This positive autoregulation is mediated by AP-1 complexes that are composed mostly of cJun. cJun is a phosphoprotein that undergoes complex changes in its phosphorylation state following exposure to phorbol esters, growth factors or transforming oncogenes. We show that UV irradiation causes increases in the phosphorylation of cJun. We have been trying to determine the common signal by which DNA damaging agents lead to activation of the UV response. We present evidence that oxidative stress may serve as a signal for AP-1 induction during the UV response. We are also trying to purify and characterize UVIC, a factor secreted from UV damaged cells which protects non-irradiated cells from damage. We have identified UVIC as a 17 kDa polypeptide that retains radioprotective activity after SDS-PAGE and renaturation. We are currently scaling up the isolation and purification process. 4 refs. (MHB)

7746 (DOE/ER/60507–5) **Radiogenic neoplasia in thyroid and mammary clonogens: Progress report, January 1, 1991–December 31, 1991.** Clifton, K.H. Wisconsin Univ., Madison, WI (United States). Dept. of Human Oncology. 31 May 1991. 11p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-87ER60507. Order Number DE92004029. Source: OSTI; NTIS; INIS; GPO Dep.

We have developed rat thyroid and mammary clonogen transplantation systems for the study of radiogenic cancer induction at the target cell level in vivo. The epithelial cell populations of both glands contain small subpopulations of cells which are capable of giving rise to monoclonal glandular structures when transplanted and stimulated with appropriate hormones. During the end of the last grant year and the first half of the current grant year, we have completed analyses and summarized for publication: investigations on the relationship between grafted thyroid cell number and the rapidity and degree of reestablishment of the thyroid-hypothalamicpituitary axis in thyroidectomized rats maintained on a normal diet or an iodine deficient diet; studies of the persistence of, and the differentiation potential and functional characteristics of, the TSH- (thyrotropin-) responsive sub-population of clonogens during goitrogenesis, the plateau-phase of goiter growth, and goiter involution; studies of changes in the size of the clonogen subpopulation during goitrogenesis, goiter involution and the response to goitrogen rechallenge; and the results of the large carcinogenesis experiment on the nature of the grafted thyroid cell number-dependent suppression of promotion/progression to neoplasia in grafts of radiation-initiated thyroid cells. We are testing new techniques for the culture, cytofluorescent analysis and characterization mammary epithelial cells and of clonogens in a parallel project, and plan to apply similar technology to the thyroid epithelial cells and clonogen population. Data from these studies will be used in the design of future carcinogenesis experiments on neoplastic initiation by high and low LET radiations and on cells interactions during the neoplastic process.

7747 (DOE/ER/60914–T1) **Comparative toxicity of strontium-90 and radium-226 in beagle dogs: Progress report of second year, December 16, 1990–December 15, 1991.**

Raabe, O.G.; Culbertson, M.R.; White, R.G.; Spangler, W.L.; Cain, G.R.; Parks, N.J.; Samuels, S.J. California Univ., Davis, CA (United States). Lab. for Energy-Related Health Research. [1991]. 6p. Sponsored by U.S. DOE Energy Research. DOE Contract FG03-89ER60914. Order Number DE92003764. Source: OSTI; NTIS; INIS; GPO Dep.

We are completing a 30-year study of the biological effects of ^{90}Sr and ^{226}Ra in the beagle in order to predict the possible long-term hazards to people from chronic exposure to low levels of irradiation. Animals received either radionuclide by several means of administration: (a) continual ingestion of ^{90}Sr, (b) a single intravenous injection of ^{90}Sr, or (c) a series of eight intravenous injections of ^{226}Ra. Although administration of ^{90}Sr and ^{226}Ra ended at 540 days of age, the animals continued to receive chronic, low-level radiation doses from these bone-seeking radionuclides throughout life. This project is the largest single cohort study in beagles of internally deposited radionuclides. It is unique in use of the ingestion route for ^{90}Sr and in exposure that began before birth and continued throughout development to adulthood with uniform labeling of the skeletons with ^{90}Sr. The last of the dogs died in 1986 at age 18.5 years, but we are continuing to investigate the significance of these long-term exposures given at low dose rates with regard to cancer production, physiologic well-being, and shortening of life through the detailed records that were kept and by study of preserved materials. All the data have been successfully accumulated and entered into a main-frame computer data base management system. Current work is exclusively directed at preparing research papers summarizing the results and the associated biostatistical and survival analyses. 15 refs., 1 fig., 4 tabs.

7748 (DOE/ER/61171–T1) **Radiation-induced leukemia: Comparative studies in mouse and man: Annual performance report, June 1, 1991–October 31, 1991.** Haas, M. California Univ., San Diego, CA (United States). [1991]. 8p. Sponsored by U.S. DOE Energy Research. DOE Contract FG03-91ER61171. Order Number DE92004436. Source: OSTI; NTIS; GPO Dep.

We now have a clear understanding of the mechanism by which radiation-induced (T-cell) leukemia occurs. In irradiated mice (radiation-induced thymic leukemia) and in man (acute lymphoblastic T-cell leukemia, T-ALL) the mechanism of leukemogenesis is surprisingly similar. Expressed in the most elementary terms, T-cell leukemia occurs when T-cell differentiation is inhibited by a mutation, and pre-T cells attempt but fail to differentiate in the thymus. Instead of leaving the thymus for the periphery as functional T-cells they continue to proliferate in the thymus. The proliferating pre- (pro-) T-cells constitute the (early) acute T-cell leukemia (A-TCL). This model for the mechanism of T-cell leukemogenesis accounts for all the properties of both murine and human A-TCL. Important support for the model has recently come from work by Ilan Kirsch and others, who have shown that mutations/deletions in the genes SCL (TAL), SIL, and LCK constitute primary events in the development of T-ALL, by inhibiting differentiation of thymic pre- (pro-) T-cells. This mechanism of T-cell leukemogenesis brings several specific questions into focus: How do early A-TCL cells progress to become potently tumorigenic and poorly treatable? Is it feasible to genetically suppress early and/or progressed A-TCL cells? What is the mechanism by which the differentiation-inhibited (leukemic) pre-T cells proliferate? During the first grant year we have worked on aspects of all three questions.

This document contains the tables of contents for the reports published by the University of Utah Radiobiology Laboratory from 1953–1987. Also included is a keyword index for the reports, and references for all books, book and symposia chapters and journal article published by Laboratory staff between 1950 and 1988.

7750 (DOE/EV/10095–T2) **Health effects of low-level radiation in shipyard workers: Final report: [Draft].** Matanoski, G.M. Johns Hopkins Univ., Baltimore, MD (United States). Dept. of Epidemiology. Jun 1991. 437p. Sponsored by U.S. DOE Defense Programs. DOE Contract AC02-79EV10095. Order Number DE92003069. Source: OSTI; NTIS; INIS; GPO Dep.

The Nuclear Shipyard Workers Study (NSWS) was designed to determine whether there is an excess risk of leukemia or other cancers associated with exposure to low levels of gamma radiation. The study compares the mortality experience of shipyard workers who qualified to work in radiation areas to the mortality of similar workers who hold the same types of jobs but who are not authorized to work in radiation areas. The population consists of workers from six government and two private shipyards.

7751 (EUR–13268(V.1)) **Radiation protection programme progress report 1985-89. Volume 1.** Commission of the European Communities, Luxembourg (Luxembourg). 1991. 1115p. Contract B16-A-292-F. Source: OSTI; NTIS (US Sales Only); INIS.

The final report of the 1985-89 radiation protection programme outlines the research work carried out during the whole contractual period under all contracts between the Commission of the European Communities and research groups in the Member States. More than 700 scientists collaborated on this programme. Results of more than 440 projects are reported. They are grouped into six sectors: radiation dosimetry and its interpretation; behaviour and control of radionuclides in the environment; non-stochastic effects of ionizing radiation; radiation carcinogenesis; genetic effects of ionizing radiation; evaluation of radiation risks and optimization of protection. Within the framework programme, the aim of this scientific research is to improve the conditions of life with respect to work and protection of man and his environment and to assure safe production of energy, i.e.: (i) to improve methods necessary to protect workers and the population by updating the scientific basis for appropriate standards; (ii) to prevent and counteract harmful effects of radiation; (iii) to assess radiation risks and provide methods to cope with the consequences of radiation accidents.

7754 (EUR–13387) **Radiation protection research and training programme 1990-91 Catalogue of contracts.** Commission of the European Communities, Luxembourg (Luxembourg). 1991. 333p. Source: OSTI; NTIS (US Sales Only); INIS.

This catalogue contains summaries of contacts included in the 1990-91 radiation protection research and training programme, which is divided into three sectors: (a) human exposure to radiation and radioactivity: (i) measurement of radiation dose and its interpretation, (ii) transfer and behaviour of radionuclides in the environment; (b) consequences of radiation exposure to man; their assessment, prevention and treatment: (i) stochastic effects of radiation, (ii) non-stochastic effects of radiation, (iii) radiation effects on the developing organism; (c) risks and management of radiation exposure: (i) assessment of human exposure and risks, (ii) optimization and management of radiation protection.

7755 (EUR-ICP-CEH–093(S)) **Working group on psychological effects of nuclear accidents, Kiev, USSR, 28 May - 1 June 1990: Summary report.** World Health Organization, Copenhagen (Denmark). Regional Office for Europe. 1990. 8p. (CONF-9005257–: International school on nuclear physics, Kiev (USSR), 28 May - 8 jun 1990). Source: OSTI; NTIS (US Sales Only); INIS.

Also issued in French, German and Russian.

The population in the areas affected by the Chernobyl accident is experiencing serious worries about possible health effects. The level of concern appears to be increasing, and the psychological context of the accident should receive detailed consideration. Surveys conducted by Soviet researchers have shown that anxiety has spread for beyond the population of the more heavily contaminated areas. People's awareness of their health status has increased enormously since the accident, and they now attribute many subjective and objective symptoms to radiation exposure. Medical personnel and lay people should be trained in counselling, to enable them to allay the fears people have.

7756 (GSI–91-17) **Cellular and molecular effects of accelerated heavy ions on cultivated mammalian cells.** Heilmann, J. Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany); Bonn Univ. (Germany). Mathematisch-Naturwissenschaftliche Fakultaet. Jun 1991. 103p. (In German). Order Number DE92750162. Source: OSTI; NTIS (US Sales Only); INIS.

In the study described here the capacity of mammalian cells to recover from irradiation with heavy ions was determined from the survival rates observed following irradiation and incubation during damage repair. While the number of surviving cells was seen to increase considerably during the first four hours after X-irradiation, no such signs of recovery were detectable following exposure to heavy ions. Two experiments even pointed to a drastic loss of cells in the initial hours after exposure. In order to assess the degree of molecular damage, total strand breaks and double strand breaks of the DNA were measured. Taking account also of findings revealed in other studies on the induction of DNA strand breaks, it was found that the efficiency curves for the different particles vary according to LET (range investigated between 300 and 16000 kev./μm), which is an observation also made in connection with other endpoints. Notably, DNA double-strand breaks measured for Ne ions (between 300 and 400 kev./μm) pointed to a relative biological effectiveness of greater than One. The nature of DNA damage inflicted was ascertained on the basis of the ratio between double-strand breaks and single-strand breaks. Like the findings on strand break induction, the dependence of the DSB-SSB ratio on the LET was seen to be largely consistent with intracellular measurements in mammalian DNA and with values determined for virus or phage DNA in solutions containing radical scavengers. This congruence appears to be suggestive of radioprotective effects of the cellular matrix. There was no evidence in confirmation of the theory that the high ionisation densities occurring in the path of heavy ions primarily lead to complex damage. (orig./MG).

7757 (INIS-BR–2855) **Viability in holder of irradiated cells: distinguish between repair and cell multiplication.** Araujo, A.C. de. Universidade do Estado, Rio de Janeiro, RJ (Brazil). Centro Biomedico. 1980 81p. (In Portuguese). Order Number DE92613525. Source: OSTI; NTIS (US Sales Only); INIS.

In experiments in which liquid holding recovery (LHR) was measured, the majority of cellular population is formed by non-viable cells and cell multiplication may be important for LHR expression. In order to distinguish between recuperation of viability (true LHR) and cell multiplication, it was necessary to employ improved plating techniques and a fluctuation test based on Poisson distribution. Our results are an indication that this fluctuation test, used together with the traditional method, is a good tool to distinguish repair from cell multiplication. (author).

7758 (INIS-BR–2857) **Thermal degradation products of saccharides: effect study over Escherichia coli K12S cells.** Oliveira, R.L.B.C. de. Universidade do Estado, Rio de Janeiro, RJ (Brazil). Centro Biomedico. 1980 77p. (In Portuguese). Order Number DE92613526. Source: OSTI; NTIS (US Sales Only); INIS.

The heat sterilization of reducing sugars, in the presence of phosphates, in alkaline pH, promotes caramelization reactions, yielding a serie of degradation products. Among them, aldehyde-like compounds seem to be responsible for the decrease in viability of DNA repair-proficient E.coli cells. A positive interaction between toxic solutions and UV-radiation effects is observed in these cells. The sinergism UV-toxic solutions varies in function of post-irradiation time and is dependent on UV dose, indicating the interference of repair processes in toxicity. The effect of non-reducing sugars on cellular viability is negligible, suggesting that toxic substances generation is linked to the presence of at least a free carbonyl group in sugar structure. All tested reducing sugars, when experimental conditions remained constant, have similarly shaped inactivation kinetics and their effects are equally inhibited by catalase activity, during incubation. (author).

7759 (INIS-BR–2859) **Contribution of radiosensitivity study for Walker 256 tumor in rats. Association of early immunization with action of ionized radiation.** Sakate, A.T.Y. Universidade do Estado, Rio de Janeiro, RJ (Brazil). Centro Biomedico. 1979 88p. (In Portuguese). Order Number DE92613530. Source: OSTI; NTIS (US Sales Only); INIS.

The suspension of tumoral cells from Walker 256 were irradiated with doses of 2.500, 4.500, 5.000, 5.500 and 7.500 rad for determining the attenuation dose. The suspension of inactives tumoral cells were injected in rats for verifying the immunized effects in relation of active Walker tumor. After be certified the growth of tumor, the rats were irradiated with cobalt 60 and was verified the decrease of tumor. (author).

7760 (INIS-BR–2863) **Occupational analysis for the Angra-1 reactor.** Moraes, A. Instituto de Radioprotecao e Dosimetria (IRD), Rio de Janeiro, RJ (Brazil). [1991] 62p. (In Portuguese). Order Number DE92613611. Source: OSTI; NTIS (US Sales Only); INIS.

Due to several modifications which were imposed to its time schedule during construction, the Angra-1 reactor did not enter to the grid in 1982 as it was initially foreseen. These modifications occurred due to an unforeseen scenario that was verified in steam generators (serie D-3, Westinghouse) of power stations with similar configurations which had been installed in other countries such as Ringhals-3 (Sweden), Almaraz-1 (Spain) and McGuine-1 (USA). So, among the main events that occurred in the Angra-1 reactor, which were of interest from the point of view of radiation protection, it could be pointed out the personnel monitoring, and the occupational exposure measurements at different reactor power, during the reactor fueling and during modification and tests performed at the steam generators and at ducts of the primary coolant circuit. (author).

7761 (INIS-BR–2869) **Status of the radiation protection in the nuclear fuel cycle: a summary.** Instituto de Radioprotecao e Dosimetria (IRD), Rio de Janeiro, RJ (Brazil). [1991] 8p. (In Portuguese) Order Number DE92613609. Source: OSTI; NTIS (US Sales Only); INIS.

From 1982 to 1984, 27 inspections of Radiation Protection were carried out in two installations of the nuclear fuel cycle, i.e.: (i) Pocos de Caldas (Minas Gerais) Facility - responsible for the search of ore, mining, beneficiation and production of uranium concentrate, and (ii) Fuel Element Production Facility (Resende, Rio de Janeiro) - responsible for fabrication of fuel elements. This report presents the results obtained during such inspections. (author).

Source: OSTI; NTIS (US Sales Only); INIS.

The biological aspects of plutonium including the metabolic behaviour in man and animals, the biochemical behaviour, and the toxicological aspects are reviewed. The results obtained from the human and animal studies suggest that the majority of plutonium is accumulated in the liver and the skeleton. However, if the exposure is through inhalation and the plutonium inhaled is highly insoluble PuO_2, a large fraction of Pu remains in the lung for a long time. The toxicity studies suggest that the alpha emitting isotopes of Pu produce bone sarcomas, liver cancers (both carcinomas and sarcomas) and peripheral lung tumors. The results also show that ^{239}Pu is 16 to 19 times more efficient in inducing bone sarcomas than is ^{226}Ra. Beagle studies show no increased hematopoietic neoplasea (leukemia). (author). 14 refs.

Postoyannaya Komissiya po Ispol'zovaniyu Atomnoj Ehnergii v Mirnykh Tselyakh. 1980 102p. (In Russian). Order Number DE92614961. Source: OSTI; NTIS (US Sales Only); INIS.

The dictionnary of radiation protection terms has been compiled by CMEA member-country specialists under the auspisious of Scientific-Technical Council for Radiation Protection of the Permanent Commision for Peaceful Atomic Energy Applications as a means for better mutual understanding in collaborative activities. The dictionnary incorporates, along with Russian terms, the corresponding ones in the official languages of CMEA member-countries who participated in its compiling: Bulgarian, Hungarian, German, Spanish, Polish, Roumanian, Czech as well as English. The dictionnary consists of three sections: 1) Ionizing radiation; 2) Ionizing radiation interaction with materials. Ionizing radiation dosimetry; 3) Radiation protection. The first section contains 16 terms, the second - 25, the third - 110. The terms within the section are arranged in sense sequences.

The training and retraining courses for the reactor operators conducted at the Nuclear Training Center of Korea Atomic Energy Research Institute are recognized as an important part of securing nuclear safety in Korea. Courses on reactor systems for the KAERI engineers, especially those paticipating in YGN-3 and YGN-4 project are also considered to be very important. A textbook for these courses has been compiled and developed based on the Emergency Operations Procedure for Westinghouse nuclear reactors. This text is intended to be used for simulation exercises making use of the Compact Nuclear Simulator designed by KAERI and Studsvik. The course material in the textbook has also been built into the Compact Nuclear Simulator software in such a way that the students can use it interactively during reactor operation simulations. It will also help the students to be prepared themselves for various malfunctions causing reactor trips by following a set of CRT-displayed procedures. (Author).

7775 (KURRI-TR–350, pp. 1-19) **Topics on children's leukemia around the Sellafield nuclear reprocessing plant.** Okada, Shigefumi (Tokyo Univ. (Japan)). Kyoto Univ., Kumatori, Osaka (Japan). Research Reactor Inst. Jun 1991. (In Japanese). (CONF-9102139–: Symposium on 'radiation research in life science', Kumatori (Japan), 26-28 Feb 1991). Yorkshire TV found a Childhood leukemia cluster in the area around the Sellafield nuclear reprocessing plant and attributed it to radioactivities released from the plant. However, further studies indicated the amount of released radioactivities too small to account for the leukemia cluster. Gardner and his team looked into 52 cases of Leukemia in the Sellafield Area, diagnosed between 1950 and 1985 and compared them with about 1000 healthy 'matched' people, born in the area. Their case-control study indicated that children were seven to eight time more likely to develop leukemia if their fathers had received a total cumulative dose of 100 mSv or more than 10 mSv in the six months before conception. This is the first time that childhood leukemia has been linked to father's radiation exposure. If this happens to be the case, one would need to reconsider the radiation protection guide recommended by ICRP. Because of its great implication, one has to examine carefully whether the Gardner's suggestion of Father's exposure is really the cause for leukemia and whether leukemia clusters will be found around the other plants? The present paper attempted to review and evaluate the Gardner's Effects. (author).

7776 (KURRI-TR–350, pp. 20-27) **Is the excess risk of childhood leukemia at Sellafield consistent with the experiences of A-bomb survivors in Hiroshima and Nagasaki ?.** Yoshimoto, Yasuhiko (Radiation Effects Research Foundation, Hiroshima (Japan)). Kyoto Univ., Kumatori, Osaka (Japan). Research Reactor Inst. Jun 1991. (In Japanese). (CONF-9102139–: Symposium on 'radiation research in life science', Kumatori (Japan), 26-28 Feb 1991). In *Proceedings of the symposium on 'radiation research in life science': Brain damage and heritable damage.* 135p. Order Number DE92713959. Source: OSTI; NTIS (US Sales Only); INIS.

The purpose of this communication is to summarize briefly selected studies relevant to the difference between the apparent pre-conception radiation-associated leukemia risks in the offspring born in the area near the Sellafield plant and to the atomic bomb survivors. Although no doubt exists about the hypothesis that radiation damages the genetic material in reproductive cells, it is important to recognize how small the effect in the first generation would be based on the various genetic endpoints. Generally only a small fraction of leukemia cases are inherited – the proportion among all spontaneous cases does not exceed 10 %. Because there is still uncertainty and controversy about the genetic effects of radiation, the possible complex confounding factors are also briefly mentioned. It is clear that the studies of the atomic bomb survivors are pertinent to the possible genetic effect due to radiation-induced mutations in the spermatogonia and oocytes while the observations in Sellafield are, as suggested by Gardner et al. pertinent to the in post-meiotic stages of spermatogenesis. No significant effect of atomic bomb radiation can be shown on the risk of leukemia as well as other genetic effect endpoints, such as the frequency of mutations associated with specific proteins, cytogenetic abnormalities, survival, and so on. (author).

(CONF-9102139–: Symposium on 'radiation research in life science', Kumatori (Japan), 26-28 Feb 1991). In *Proceedings of the symposium on 'radiation research in life science': Brain damage and heritable damage.* 135p. Order Number DE92713959. Source: OSTI; NTIS (US Sales Only); INIS.

Since Gardner et al. reported an increased incidence of leukemia among children of workers of a nuclear reactor in Sellafield, UK, there have been a number of discussions on the possibility of increased incidence of leukemia among children born from parents exposed to radiation or chemical agents. In this present paper, apart from the leukemia incidence in children from atomic bomb survivors which was discussed by Dr. Yoshimoto, familial leukemia, i.e., a cluster of leukemia among family members within four genetic relations, was discussed with special reference to the age distribution, type of leukemia and consanguinity. Leukemia in twin and leukemias in individuals with congenital anomalies with or without chromosome abnormalities were also discussed. (author).

7778 (KURRI-TR–350, pp. 34-42) **Will parental exposure to radiation induce tumor in sibling ?.** Watanabe, Hiromitsu (Hiroshima Univ. (Japan). Research Inst. for Nuclear Medicine and Biology); Takahashi, Tadateru; Toyota, Kazuhiro; Ito, Akihiro. Kyoto Univ., Kumatori, Osaka (Japan). Research Reactor Inst. Jun 1991. (In Japanese). In *Proceedings of the symposium on 'radiation research in life science': Brain damage and heritable damage.* 135p. Order Number DE92713959. Source: OSTI; NTIS (US Sales Only); INIS.

There are reports of possible risk of transmission of genetic trait(s) through the germ cell in acquired cancer from parent to sibling. We have confirmed that paternal exposure to ^{252}Cf neutron irradiation in mice induced sperm abnormality leading to dominant lethals and liver tumors at F_1 offspring. On the other hand, C3H male mice have been known to have high incidence of spontaneous hepatic tumors and increased hepatic tumor risk in F_1 offsprings maybe caused by the genetic transmission of the hepatoma-inducible-trait amplified by ^{252}Cf neutron irradiation. The present paper describes that paternal exposure to X-ray or chemicals induces heritable characteristics including anomalies and tumors in some special strains of mice and rats. Some possible mechanisms of transmission of genetic trait(s) are also discussed. (author) 52 refs.

7779 (KURRI-TR–350, pp. 43-56) **Radiosensitivity of mouse germ cells.** Matsuda, Yoichi (National Inst. of Radiological Sciences, Chiba (Japan)); Takeuchi, Toyoko; Maemori, Mamiko; Seki, Naohiko; Tobari, Izuo. Kyoto Univ., Kumatori, Osaka (Japan). Research Reactor Inst. Jun 1991. (In Japanese). (CONF-9102139–: Symposium on 'radiation research in life science', Kumatori (Japan), 26-28 Feb 1991). In *Proceedings of the symposium on 'radiation research in life science': Brain damage and heritable damage.* 135p. Order Number DE92713959. Source: OSTI; NTIS (US Sales Only); INIS.

To estimate radiosensitivity of mouse germ cells the analysis of chromosome aberrations was performed at diakinesis-metaphase I of spermatocytes and first-cleavage metaphase of one-cell embryos after exposure to radiations at various stages of primary spermatocytes and spermatids. The result provided evidence that there are two major types of DNA damage in X-irradiated sperm : (1) short-lived DNA lesions ; the lesions are subject to repair inhibition by agents added in G_1, and are converted into chromosome-type aberrations during G_1, and (2) long-lived DNA lesions ; the lesions persist until S phase and repair of the lesions is inhibited by caffeine, hydroxyurea and arabinofuranosyl cytosine in G_2. The characteristic of X-ray damage induced in spermiogenic stage and repair mechanism for the damage in the fertilized egg were discussed comparing with the results with two chemicals, methyl methanesulfonate (MMS) and mitomycin C (MMC). (J.P.N.).

7780 (KURRI-TR–350, pp. 57-68) **Radiosensitivity in human sperm chromosomes.** Kamiguchi, Yujiroh (Asahikawa Medical Coll., Hokkaido (Japan)). Kyoto Univ., Kumatori, Osaka (Japan). Research Reactor Inst. Jun 1991. (In Japanese). (CONF-9102139–: Symposium on 'radiation research in life science', Kumatori (Japan), 26-28 Feb 1991). In *Proceedings of the symposium on 'radiation research in life science': Brain damage and heritable damage.* 135p. Order Number DE92713959. Source: OSTI; NTIS (US Sales Only); INIS.

We studied the effects of in vitro irradiation of X-, γ- and β-rays on human sperm chromosomes, using our interspecific in vitro fertilization system between human spermatozoa and zona-free hamster oocytes. Spontaneous incidence of chromosome aberrations in human spermatozoa was also studied. Spontaneous incidence of aneuploid spermatozoa was low (1.4 %). Whereas the incidence of spermatozoa with structural chromosome aberrations was surprisingly high (13.5 %), varying considerably among the donors (3.6 - 20.7 %). This variation has no age-dependent correlation. It may be due to the difference in personal history of mutagen exposure. Many of the structural chromosome aberrations were of breakage type (breaks and fragments). They are considered to take place during the postmeiotic period from the spermatid stage to ejaculation. The in vitro exposure to X-, γ- and β-rays showed similar dose effects in inducing chromosome aberrations. The dose-dependent increases of spermatozoa with radiation-induced structural aberrations were linear. The majority of radiation-induced aberrations were of breakage type and they increased linearly with increase of dosage. The RBE values of X-rays and β-rays to γ-rays were nearly 1. There was no great individual variation among donors in the susceptibility of sperm chromosomes to X-, γ- and β-rays. Human spermatozoa have about 1.5- to 3-fold radiosensitivity of those of common laboratory animals. Human spermatozoa retained a high fertilizing ability even after a high dose irradiation (4.25 Gy), indicating possible transmission of radiation-induced chromosomal lesions to the next generation. (author).

7781 (KURRI-TR–350, pp. 77-88) **What do we learn from the mental retardation induced by prenatal exposure in Hiroshima and Nagasaki ?.** Otake, Masanori (Radiation Effects Research Foundation, Hiroshima (Japan)). Kyoto Univ., Kumatori, Osaka (Japan). Research Reactor Inst. Jun 1991. (In Japanese). (CONF-9102139–: Symposium on 'radiation research in life science', Kumatori (Japan), 26-28 Feb 1991). In *Proceedings of the symposium on 'radiation research in life science': Brain damage and heritable damage.* 135p. Order Number DE92713959. Source: OSTI; NTIS (US Sales Only); INIS.

Significant effects of exposure to ionizing radiation on the developing brain are seen among those individuals prenatally exposed in the 8th through 25th weeks after fertilization. These effects, particularly in the most sensitive period, 8-15 weeks after fertilization, manifest themselves as an increased frequency of severe mental retardation, a diminution in IQ score and in school performance, and an increase in the occurrence of seizures. Of 30 SMR cases, 18(60%) had small heads. About 10% of the individuals with small head sizes observed among the in utero clinical sample were mentally retarded when we exclude two probable nonradiation-related cases of Down's syndrome from the 19 SMR cases exposed 8-15 weeks after fertilization, the 95% lower bound of the threshold based on the new dosimetry system appears to be in the range of 0.12-0.23 Gy. In the 16-25 weeks period, the 95% lower bound of the threshold is 0.21 Gy both with and without inclusion of two probable nonirradiation retarded cases. In a regression analysis of IQ scores and school performance data, a greater linearity is suggested with the new dosimetry (DS86) than with the old (T65DR), but the changes in the mean IQ scores and school performances in the low dose region are similar to the changes emerging in the control group, particularly so with doses under 0.10Gy. (author).

7782 (KURRI-TR–350, pp. 89-94) **Effects of some radiations to the development of the brain.** Satow, Yukio (Hiroshima Univ. (Japan). Research Inst. for Nuclear Medicine and Biology). Kyoto Univ., Kumatori, Osaka (Japan). Research Reactor Inst. Jun 1991. (In Japanese). (CONF-9102139–: Symposium on 'radiation research in life science', Kumatori (Japan), 26-28 Feb 1991). In *Proceedings of the symposium on 'radiation research in life science': Brain damage and heritable damage.* 135p. Order Number DE92713959. Source: OSTI; NTIS (US Sales Only); INIS.

The effects of Cf-252, tritium water (HTO) to the mouse embryonic brain and the threshold to produce experimental microcephaly were examined. The results obtained by Cf-252 and HTO irradiations were compared with those of Co-60 standard gamma-rays or tritium simulator (Cs-137 gamma-rays) respectively for determining the relative biological effects (RBE) for the production of microcephaly. Pregnant mouse were injected intraperitoneally with HTO containing 0.05, 0.1, 0.2 or 0.4 mCi HTO/mouse on day 13 of pregnancy. To obtain accurate RBE values of HTO, pregnant mouse were exposed to Cs-137 gamma-rays by tritium simulator on days 13-18 or pregnancy at exponentially decreasing dose in accordance with body tritium concentration. Cf-252 and Co-60 were irradiated to the mouse on day 13 of pregnancy at the same dose rate. The mouse newborn were sacrificed 12 weeks after birth and the brain weight, the length of transverse of cerebrum, antero-posterior length of cerebrum were measured under the stereo-microscope. The results revealed that the shortening of the transverse, antero-posterior length of the cerebrum were seen in the group given 0.05 mCi HTO/mouse (accumulated doses were about 12.5 cGy) of HTO and same results were seen in the group irradiated with 5 cGy of Cf-252 on day 13 of pregnancy. Comparison between HTO and tritium simulator and between Cf-252 and Co-60 showed the teratogenic effects of RBE to produce the 'stereomicroscopically measured microcephaly' to be greater than 1.5 and to reach approximately 3.2. (author).

7783 (KURRI-TR–350, pp. 95-106) **High vulnerability of the developing brain to ionizing radiation.** Inouye, Minoru (Nagoya Univ. (Japan). Research Inst. of Environmental Medicine). Kyoto Univ., Kumatori, Osaka (Japan). Research Reactor Inst. Jun 1991. (In Japanese). (CONF-9102139–: Symposium on 'radiation research in life science', Kumatori (Japan), 26-28 Feb 1991). In *Proceedings of the symposium on 'radiation research in life science': Brain damage and heritable damage.* 135p. Order Number DE92713959. Source: OSTI; NTIS (US Sales Only); INIS.

The developing mammalian brain is highly susceptible to environmental teratogenic insults, because of its long-lasting sensitive period extending from the beginning of embryonic organogenesis to the postnatal infantile period, the great vulnerability of undifferentiated neural cells to wide range of environmental agents including ionizing radiation, and the lack of further reproductive capacity of neurons. Disturbances in the production of neurons, and their migration to the cerebral and cerebellar cortices, give rise to malformations of the brain, such as an absent corpus callosum, disorganized cortical architecture, abnormal fissuring of the cerebral and cerebellar hemispheres, heterotopic cortical gray matter, ectopic cerebellar granule cells, microcephaly, etc. The critical developmental stage for the induction of histogenetic disorders of the cerebral cortex in humans is 8 weeks of pregnancy and following some weeks. This corresponds to day 13 of pregnancy for mice and day 15 for rats, i.e., the ventricular cells of fetal telencephalon are most susceptible to radiation-induced cell death in this stage of development. The lowest doses of X- and gamma-radiations which induce detectable biological effects in rats and mice are around 0.02 Gy in increasing acute cell death. Reduced brain weight and abnormal dendritic arborization are induced by 0.25 Gy and more. Histological abnormalities are produced by 0.5 Gy and more, and microcephaly and cerebellar malformations are by 1 Gy and more. (author).

7784 (KURRI-TR–350, pp. 107-117) **Neurobehavioral teratogenicity of prenatal ionizing-radiations.** Tamaki, Yoshitaka (Shinshu Univ., Nagano (Japan). Fuculty of Education). Kyoto Univ., Kumatori, Osaka (Japan). Research Reactor Inst. Jun 1991. (In Japanese). (CONF-9102139–: Symposium on 'radiation research in life science', Kumatori (Japan), 26-28 Feb 1991). In *Proceedings of the symposium on 'radiation research in life science': Brain damage and heritable damage.* 135p. Order Number DE92713959. Source: OSTI; NTIS (US Sales Only); INIS.

Prenatal irradiation upon the human embryo may result in both malformations and structural damage or degeneration of the nervous system. Neurobehavioral effects of prenatal irradiation can be also regarded as non-stochastic effects with threshold doses. Since up to now only little is known about the molecular basis of learning, memory and behavior the lowest radiation doses for the neurobehavioral teratogenicity of the non-stochastic effects is fairly obscure. (author).

7785 (KURRI-TR–350, pp. 118-125) **Environmentally-induced teratogenesis in humans and the intrauterine fate of normal and abnormal human conceptuses.** Shiota, Kohei (Kyoto Univ. (Japan). Faculty of Medicine). Kyoto Univ., Kumatori, Osaka (Japan). Research Reactor Inst. Jun 1991. (In Japanese). (CONF-9102139–: Symposium on 'radiation research in life science', Kumatori (Japan), 26-28 Feb 1991). In *Proceedings of the symposium on 'radiation research in life science': Brain damage and heritable damage.* 135p. Order Number DE92713959. Source: OSTI; NTIS (US Sales Only); INIS.

This paper reviews some issues concerning environmentally-induced teratogenesis in humans, including identification of human teratogens by means of human epidemiology and animal testings and the assessment of their teratogenic risk in human embryos. It has been shown that a substantially large proportion of abnormal human conceptuses are eliminated spontaneously at early stages of gestation. The prenatal elimination rate of morphologically and/or cytogenetically abnormal human conceptuses has been estimated to be over 90%, while the corresponding rate for normal conceptuses is 20-25 %. (author).

7787 (NEI-SE–91) **The elk and its forage plants.** Johanson, K.J.; Bergstroem, R. Swedish Univ. of Agricultural Sciences, Uppsala (Sweden). Dept. of Radioecology. [1991]. 8p. (In Swedish). Order Number DE92613597. Source: OSTI; NTIS (US Sales Only); INIS.

Reports measurements of radioactive cesium in elk, roedeers and plants. The analysis cover the years 1986 to 1988. Samples have been taken from animals killed by hunting or in traffic accidents and from plants which are the basic food of the animals. The average cesium content in meet from elk was: 1986 760 Bq/kg, 1987 664 Bq/kg and for 1988 it is estimated to be about 800 Bq/kg. (K.A.E.).

7788 (NPL-RSA(EXT)–15) **Comparison of factors given in ICRU Report 23 and IAEA TRS 277 for converting from exposure/air kerma to absorbed dose to water for medium energy X-rays.** Rosser, K.E. National Physical Lab., Teddington (United Kingdom). Feb 1991. 18p. Order Number DE92614986. Source: OSTI; NTIS (US Sales Only); INIS.

New values of the factors required to convert the reading of an ionization chamber calibrated in terms of air kerma (or exposure) to absorbed dose to water for medium energy X-rays were given in a Code of Practice published by the IAEA in 1987. These factors differ by a maximum of 12.5% at 0.15 mm Cu HVL from those given in ICRU Report 23. This paper discusses the difference between the ICRU and IAEA conversion factors and forms the basis of the recommendation of the IPSM low and medium energy X-ray dosimetry working party, that dosimetry in the U.K. should continue to be based on ICRU Report 23 and therefore on the current HPA Code of Practice. (author).

7789 (PNL–7600-Pt.1, pp. 7-8) **Tatum Dome cancer incidence study.** Sever, L.E. Pacific Northwest Lab., Richland, WA (United States). Jun 1991. In *Pacific Northwest Laboratory annual report for 1990 to the DOE Office of Energy Research. Part 1, Biomedical sciences.* 151p. Order Number DE91015807. Source: OSTI; NTIS.

The US Department of Energy (DOE) was asked to study the occurrence of cancers in the area around the Tatum Salt Dome Test Site in Lamar County, Mississippi. A two-phased approach is being employed, and the first phase has been completed. This phase has shown that the numbers of cancer deaths or types of cancers in the area around Tatum Dome are not different than expected. That is, there does not appear to be an excess of cancer deaths or evidence of a cluster of cancers associated with the test site. There are, however, limitations to studying only information on deaths. In cooperation with the Mississippi State Department of Health, a second phase therefore is underway. The essential question to be answered in Phase 2 is this: is there an excess number of cancers, particularly types of cancer known to be associated with radiation exposure, near the Tatum Dome site?

7790 (PNL–7600-Pt.1, pp. 33-38) **National radiobiology archives.** Watson, C.R. Pacific Northwest Lab., Richland, WA (United States). Jun 1991. In *Pacific Northwest Laboratory annual report for 1990 to the DOE Office of Energy Research. Part 1, Biomedical sciences.* 151p. Order Number DE91015807. Source: OSTI; NTIS.

The National Radiobiology Archives is a comprehensive effort to gather, organize, and catalog data, tissues, and documents related to radiobiology studies. This will provide future researchers with materials for analysis by advanced molecular biology techniques and with information for statistical analysis to compare results of these and other studies. The project concentrated initially on three tasks associated with studies of beagle dogs exposed to ionizing radiation at five DOE laboratories: (1) implementing an interlaboratory computerized information system containing a summarized dose-and-effects database with results for each of more than 5,000 life-span-observation dogs, a collection inventory database, and a bibliographic database; (2) establishing a document archives of research materials such as logbooks, clinical notes, radiographic films, and pathologists' observations; and (3) establishing a specimen archives for research materials such as biopsy and necropsy tissue samples or histopathology blocks and slides. The databases were designed and have been populated with records from three laboratories. Tissue specimens and histopathology blocks from more than 1,000 dogs have been received from the University of California at Davis. A collaborative effort was initiated for the analysis of ^{137}Cs studies with Argonne National Laboratory and the Inhalation Toxicology Research Institute.

7791 (PNL–7600-Pt.1, pp. 39-44) **Low-level ^{239}PuO$_2$ life-span studies.** Sanders, C.L. Pacific Northwest Lab., Richland, WA (United States). Jun 1991. In *Pacific Northwest Laboratory annual report for 1990 to the DOE Office of Energy Research. Part 1, Biomedical sciences.* 151p. Order Number DE91015807. Source: OSTI; NTIS.

A total of 3,192 female Wistar, 198 male Wistar, 192 female Long-Evans, and 200 female Fisher-344 rats were either sham exposed to, or given a single inhalation of, ^{239}PuO$_2$. Rats are being examined during their life span for spatial-temporal dose-distribution patterns and for lung tumor formation. Significant life-span shortening was seen only at lung doses >8 Gy. The dose-response curve for all lung tumors continues to be best fitted by a quadratic function and a 'practical' threshold of 1-2 Gy; maximum lung tumor incidence is seen at about 8 Gy. Similar quadratic fits were also seen with predominant individual tumor types, squamous carcinoma and adenocarcinoma. Differences in lung tumor incidences between Fischer-344 and Long-Evans rats may be attributed to a faster lung clearance of PuO$_2$ in Long-Evans rats. Increased cell proliferation of type 2 alveolar epithelium may account for much of the carcinogenicity of inhaled plutonium in the lung and the possible existence of a practical threshold response similar to that seen with nongenotoxic chemicals. The incidence of brain tumors in plutonium-exposed Wistar rats was about twice that seen in sham-control rats for both males and females ($p = 0.09$); the predominant tumor type was astrocytoma.

7792 (PNL–7600-Pt.1, pp. 45-50) **Inhalation hazards to uranium miners.** Cross, F.T. Pacific Northwest Lab., Richland, WA (United States). Jun 1991. In *Pacific Northwest Laboratory annual report for 1990 to the DOE Office of Energy Research. Part 1, Biomedical sciences.* 151p. Order Number DE91015807. Source: OSTI; NTIS.

Using experimental animals, the authors are investigating levels of air contaminants that produce respiratory system disease in radon-exposed populations. Lung cancer incidence and deaths from degenerative lung disease are significantly elevated among uranium miners, but the cause-effect relationships for these diseases are based on inadequate epidemiological data. This project identifies agents or combinations of agents (both chemical and radiological), and their exposure levels, that produce respiratory tract lesions, including respiratory epithelial carcinoma, pneumoconiosis, and emphysema. Histopathological examination was continued on 8,000 Series (radon-, radon-progeny-, and uranium ore-dust-exposed) life-span animals and completed on 11,000 Series (radon-, radon-progeny-, uranium ore-dust-, and cigarette-smoke-exposed) serial-sacrifice animals. Data on 8,000 Series animals continue to show that the risk of lung tumors continues to decrease in proportion to the decrease in cumulative radon-progeny exposure and remains elevated at exposures comparable to those found in houses. Data on 11,000 Series animals continue to suggest that cigarette smoke ameliorates radon-progeny-induced lung tumors; however, adenomatosis is more prevalent and severe in rats exposed to smoke after radon-progeny exposure than before radon-progeny exposure. Finally, the validity of the dosimetric approach for estimating risks of plutonium exposures from radon exposures was examined.

7793 (PNL–7600-Pt.1, pp. 51-54) **Mechanisms of radon injury.** Cross, F.T. Pacific Northwest Lab., Richland, WA (United States). Jun 1991. In *Pacific Northwest Laboratory annual report for 1990 to the DOE Office of Energy Research. Part 1, Biomedical sciences.* 151p. Order Number DE91015807. Source: OSTI; NTIS.

In this project the authors conduct molecular, cellular, and whole-animal research relevant to understanding the mechanisms of radon and radon-progeny injury to the respiratory tract. The work specifically addresses the exposure-rate effect in radon-progeny carcinogenesis; the induction-promotion relationships associated with exposure to radon and cigarette-smoke mixtures; the role of oncogenes in radon-induced cancers; the effects of radon on DNA as well as on DNA repair processes; and the involvement of growth factors and their receptors in radon-induced carcinogenesis. In vitro radon and radon-progeny exposures of adult and fetal rat lung cells were initiated to correlate with data on growth factor and growth factor receptor involvement in radon-exposed rats. The analysis of survival response data on Chinese hamster ovary cells (CHO-C18) exposed to radon and radon progeny in intercalibration experiments continued using a model to calculate dose to the cell nucleus for cells exposed in suspension culture. Southern blot analyses of x-ray- and radon-induced mutations at the CHO-HGPRT locus showed a high percentage of deletion-type events in contrast to a low percentage of deletion-type events in spontaneous mutants. No alterations were seen in spontaneous mutants although to date they comprise about 28% of the mutants from x- and radon-irradiated cells. Initiation-promotion-initiation experiments continued in male SPF Wistar rats exposed to radon and cigarette-smoke mixtures. Biological/statistical modeling of PNL experimental data on radon-induced lung tumors in rats also continued.

7794 (PNL–7600-Pt.1, pp. 55-63) **Dosimetry of radon progeny.** James, A.C. Pacific Northwest Lab., Richland, WA (United States). Jun 1991. In *Pacific Northwest Laboratory annual report for 1990 to the DOE Office of Energy Research. Part 1, Biomedical sciences.* 151p. Order Number DE91015807. Source: OSTI; NTIS.

The purpose of this project is to provide key dosimetric models that are needed to evaluate human cancer risks from exposures to radon and thoron progeny and to relate risk to the conditions of exposure. The research encompasses modeling and experimental studies that are necessary (1) to interpret human exposures to radon and thoron progeny in terms of effective dose to sensitive cells, and (2) to integrate findings of the DOE/OHER Radon Research Program, including the effects observed in experimental animals and the cellular and molecular responses observed in vitro, into a coherent and comprehensive assessment of human cancer risks. The authors report here the development and application of a dosimetric model to evaluate radiation doses to sensitive cells throughout the bronchial epithelium of the human adult, child, and infant, and also the corresponding microdosimetric probabilities of radiation events at the subcellular level. The dosimetric model has been used by a Committee of the National Research Council/National Academy of Sciences to examine the extrapolation of risk estimates developed from studies of underground miners to the general population exposed in the home environment.

7795 (PNL–7600-Pt.1, pp. 71-77) **Growth factors in radiation carcinogenesis.** Leung, F.C. Pacific Northwest Lab., Richland, WA (United States). Jun 1991. In *Pacific Northwest Laboratory annual report for 1990 to the DOE Office of Energy Research. Part 1, Biomedical sciences.* 151p. Order Number DE91015807. Source: OSTI; NTIS.

This research project examines the involvement of growth factors (GF) and their receptors (GFR) in radiation-induced carcinogenesis of the lung in animals. The authors used immunocytochemical assays for detecting GF/GFR in lung tumors from dogs and rats exposed to inhaled radionuclides including $^{239}PuO_2$, $^{238}PuO_2$, $^{239}Pu(NO_3)_4$, and radon progeny. Immunocytochemical analysis of epidermal growth factor (EGF) receptor (EGFR) expression was performed on paraffin-block sections of 51 primary lung tumors from dogs exposed to inhaled plutonium and 6 primary lung tumors from control dogs. Four of six (67%) primary lung tumors from control dogs and 21 of 51 (41%) primary lung tumors from plutonium (Pu-) exposed dogs stained positively. In the Pu-exposed dog lung tumors, EGFR-positive staining was observed in 2 of 5 epidermoid carcinomas, 11 of 19 bronchioloalveolar carcinomas, 5 of 15 papillary adenocarcinomas, and 3 of 11 adenosquamous carcinomas. In the control dog lung tumors, EFGR staining was positive in 2 of 2 bronchioloalveolar carcinomas, 2 of 3 papillary adenocarcinomas, and 0 of 1 adenosquamous carcinoma. EFGR-positive staining was observed in 1 of 16 dog lung tumors at the three lowest exposure levels and in 20 of 35 dog lung tumors at the two highest exposure levels. In radon-induced rat lung tumors, EGF, EGFR, transforming growth factor-alpha (TGF-α), and bombesin were found to be abnormally expressed. The abnormal expressions of these GF/GFR were mainly associated with epidermoid carcinoma of the lung and were not found in other histotypes.

7796 (PNL–7600-Pt.1, pp. 79-84) **Oncogenes in radiation-induced carcinogenesis.** Frazier, M.E.; Stiegler, G.L. Pacific Northwest Lab., Richland, WA (United States). Jun 1991. In *Pacific Northwest Laboratory annual report for 1990 to the DOE Office of Energy Research. Part 1, Biomedical sciences.* 151p. Order Number DE91015807. Source: OSTI; NTIS.

The authors are studying the role of activated oncogenes in radiation-induced carcinogenesis. Lung tumor and leukemic cells have been obtained from studies of life-span dose-effect relationships in experimental animals exposed to either plutonium, inhaled radon progeny, or external whole-body radiation. They have done molecular analysis of the ras oncogene family in selected samples using the polymerase chain reaction (PCR) method and direct DNA sequencing of the amplified gene products. They have identified specific activating ras mutations in about one-half of the samples and are characterizing their frequency and specificity to the particular source of inducing radiation. Ultimately, they will use the accumulated data to describe a pattern of genetic change that might provide a basis for distinguishing damage caused by different forms of radiation and chemical mutagens.

7797 (PNL–7600-Pt.1, pp. 85-89) **Mutation of DNA targets.** Schneider, R.P. Pacific Northwest Lab., Richland, WA (United States). Jun 1991. In *Pacific Northwest Laboratory annual report for 1990 to the DOE Office of Energy Research. Part 1, Biomedical sciences.* 151p. Order Number DE91015807. Source: OSTI; NTIS.

The project is testing the hypothesis that tumor suppressor genes are important targets in radiation carcinogenesis. The authors have prepared specific DNA probes and primers to dog Rb and rat p53 genes to characterize their integrity in preserved tumor tissue from animals exposed to radiation. They have amplified, cloned, and analyzed the sequence of a 534-bp fragment of dog Rb cDNA. Methods and primers were developed for amplification and analysis of the rat p53 gene. Amplification of the p53 gene from rat genomic DNA results in amplification of fragments of the predicted size of a cDNA copy of the gene, suggesting the presence of a processed pseudogene.

7798 (PNL–7600-Pt.1, pp. 97-101) **Genotoxicity of inhaled energy effluents.** Brooks, A.L. Pacific Northwest Lab., Richland, WA (United States). Jun 1991. In *Pacific Northwest Laboratory annual report for 1990 to the DOE Office of Energy Research. Part 1, Biomedical sciences.* 151p. Order Number DE91015807. Source: OSTI; NTIS.

The interaction between cellular and genetic damage induced by low- and high-LET radiation and damage produced by chemicals is being studied. The authors have concentrated their research on metals, organic solvents, and fibers used in the nuclear industry and present at nuclear waste sites. Research on metals has demonstrated a multiplicative interaction between beryllium and x rays for induction of chromosome aberrations. Silicon carbide (SiC) fibers used in space nuclear systems were evaluated in lung epithelial cells (LEC) and Chinese hamster ovary cells (CHO). SiC produced a concentration-related increase in cell killing in both cell types but induced no increase in the frequency of micronuclei in either cell type. The fibers interfered with cytokinesis, causing a significant increase in the frequency of multinucleated giant cells in CHO cells but having little effect on LEC cells. No interaction between damage from gamma rays and that from SiC fibers was demonstrated using micronuclei as an endpoint. Research has begun on the genotoxic responses of cells in culture to organic solvents such as methyl isobutyl ketone (hexone), which was used to reprocess nuclear fuels and is now present in large amounts in nuclear waste sites. Hexone caused a concentration-related increase in cell killing and a small increase in the frequency of micronuclei induced in LEC cells. No interaction between damage from gamma rays and hexone was detected by induction of micronuclei. Expansion of this research in vitro and in vivo will provide a mechanistic foundation on which to define the interaction of radiation and chemicals in production of chromosome and cellular damage. Awareness of these mechanisms flags potential problem areas and allows adequate worker protection both in the nuclear industry and during nuclear waste-site cleanup.

7799 (PNL–7600-Pt.1, pp. 103-107) **Fetal and juvenile radiotoxicity.** Sikov, M.R. Pacific Northwest Lab., Richland, WA (United States). Jun 1991. In *Pacific Northwest Laboratory annual report for 1990 to the DOE Office of Energy Research. Part 1, Biomedical sciences.* 151p. Order Number DE91015807. Source: OSTI; NTIS.

This project is involved with the deposition, dosimetry, and toxicity of radionuclides relative to prenatal or postnatal age. Recent emphasis is directed at performing comparative and predictive analyses, modeling patterns and phenomenological interactions to facilitate extrapolations to man, and investigating teratogenic mechanisms. This information is being used in setting radiological protection standards for pregnant women and for rapidly growing infants and children. The authors have completed evaluations of specimens and data from previous experiments, including dosimetric assessments that demonstrated that radon progeny were restricted in their transfer to the fetus during inhalation exposures of pregnant rats. The dosimetry confirmed predictions that the major dose to the conceptus would come from radon that crossed the placenta and its decay products that 18-hour exposures to 124 WLM (working-level months) per day for 13 days would not be teratogenic. The authors further examined relationships between radionuclide transfer to the embryo/fetus and fractional absorption from gut; metabolites showed greater similarities and toxic materials greater differences. Immunocytochemical studies of alterations of extracellular matrix and cell surfaces by radiation effects on limb development in vitro have demonstrated fibronectin changes that correlate with histological and histochemical changes in cartilage differentiation. Related experiments have provided parallel informational about radiation effects on the processes and roles on intercellular communication during early interactions among blastomeres.

7800 (ANL/CP–74664) **Chronic lung injury risk estimates for urban areas having ozone patterns similar to those in the Northeast.** Absil, M. (Argonne National Lab., IL (United States)); Narducci, P.; Whitfield, R.; Richmond, H.M. Argonne National Lab., IL (United States). [1991]. 14p. Sponsored by Environmental Protection Agency. DOE Contract W-31109-ENG-38. (CONF-911180–1: Specialty conference on tropospheric ozone and the environment, Atlanta, GA (United States), 5-7 Nov 1991). Order Number DE92004718. Source: OSTI; NTIS; GPO Dep.

This paper describes the approach and result of an assessment of health risks associated with long-term exposure to ozone. The health endpoint of interest is the probability of formation of mild lesions in the centriacinar region of the lung among children living in New York City. The risk model incorporates an exposure model and a health model. The exposure model is preliminary results of the probabilistic NAAQS Exposure Model (P-NEM) for ozone, and the health model is the judgments of active researchers about the likelihood of formation of ozone-induced lesions in the human lung. Children and New York City were chosen as the population and city of interest because it is believed that children are more sensitive to ozone than any other group of people, and New York City is more representative of other urban areas than Los Angeles, the other city of which P-NEM exposure results are available. Risk results are presented for ten exposure distributions generated by P-NEM, two air quality scenarios ("as-is" and "attainment"), and two exposure periods (1 and 10 ozone seasons). The results vary across experts, are not very sensitive to variations in P-NEM exposure distributions, are lower for attainment conditions than as-is conditions, and are lower for 1 season of exposure than 10 seasons. Although these results are specific to children living in areas having exposure patterns similar to those found in the Northeast, they are fairly representative of results for outdoor workers in the Northeast and Southern California and for children in Southern California. The reason for this is that many experts believe that children and outdoor workers respond in a similar fashion to the given exposure patterns, or that exposure patterns in the Northeast and Southern California are similar. Some experts held both of these beliefs. These results should help policymakers evaluate alternative national ambient air quality standards for ozone. 4 refs., 9 figs., 3 tabs.

7801 (CONF-9110308-1) **The toxicity of particles from combustion processes.** Henderson, R.F.; Mauderly, J.L. Lovelace Biomedical and Environmental Research Inst., Albuquerque, NM (United States). Inhalation Toxicology Research Inst. [1991]. 18p. Sponsored by U.S. DOE Energy Research. DOE Contract AC04-76EV01013. From International conference on toxicology of combustion processes; Pavia (Italy); 28-30 Oct 1991. Order Number DE92004255. Source: OSTI; NTIS; INIS; GPO Dep.

The pulmonary toxicity of inhaled particles will depend on their size, solubility and inherent toxicity. Many combustion-derived particles, such as soot and fly ash, are of a respirable size and, being poorly soluble, are retained for prolonged periods in the lung. The acute toxicity of fly ash from coal combustion was compared to that of a known toxic particle, alpha-quartz, by exposures of rats to 35 mg/m^3 of each type of particle for 7 hr/day, 5 days/wk for 4 wk. The acute pulmonary toxicity was measured by analysis of bronchoalveolar lavage fluid. One year after the exposures, fibrosis with granulomas was observed in the quartz-exposed rats, while little or no fibrosis developed in the fly-ash-exposed rats. The toxicity of soot from diesel exhaust was determined by chronic (30 mo) exposures of rats, 7 hr/day, 5 days/wk to exhaust containing 0.35, 3.5 or 7.0 mg/m^3 soot. The two higher exposures caused persistent pulmonary inflammation, fibrosis and neoplasmas. Rats exposed to the lowest concentration demonstrated no toxic responses and there was no life shortening caused by any exposure. Ongoing comparative studies indicate that pure carbon black particles cause responses similar to those caused by diesel exhaust, indicating that much of the toxicity induced by the diesel soot results from the presence of the large lung burdens of carbonaceous particles.

7802 (DOE/EV/10277-T2) **Mechanisms of action of heavy metals and asbestos on cultured animal cells: Adaptation, transformation and progression: Final progress report, August 1, 1979–January 31, 1987.** Rubin, H. California Univ., Berkeley, CA (United States). [1991]. 131p. Sponsored by U.S. DOE Energy Research. DOE Contract AS03-79EV10277. Order Number DE92004101. Source: OSTI; NTIS; GPO Dep.

Living organisms are exposed to and affected by a variety of physical and chemical environmental factors. Among these are a number of chemical agents which seriously modify the normal functioning and growth of biological systems. The general purpose of this project was to determine some of the effects of several important chemicals on living cells and to investigate the molecular mechanisms whereby these external agents affected cellular structure, physiology, metabolism and growth. Our focus was on several environmental constituents, including asbestos and the heavy metals cadmium, mercury, lead and nickel, which gave both short term and long term effects on various organisms and consequently are of serious public health concern.

7803 (DOE/OR/00033-T461) **An evaluation of aquatic toxicity data with a population growth model for application to environmental hazard assessment.** Burton, W.D. Tennessee Univ., Knoxville, TN (United States). May 1991. 169p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-76OR00033. Order Number DE92004769. Source: OSTI; NTIS; GPO Dep.

Acute and chronic bioassays with the cladocerans Ceriodaphnia dubia and Daphnia magna were conducted using four chemicals, each having a different mode of action. The chemicals were: cadmium (chloride), pentachlorophenol (PCP), 1-octanol, and 1-naphthyl-N-methylcarbamate (carbaryl). The data obtained from the tests were used to compare species sensitivities, endpoint sensitivities, and the relative toxicities of the chemicals. In the acute bioassays, estimates of the median lethal concentrations (48-h LC_{50}S) were used to compare the species sensitivities. Ceriodaphnia dubia was more sensitive than D. magna to all four chemicals, and carbaryl was the most toxic chemical to both species. The sensitivity of three endpoints (survival, reproduction and the intrinsic rate of natural increase, r) were used to evaluate the chronic toxicity of the four chemicals to C. dubia and D. magna. Survival, reproduction and r all declined with greater concentrations of the chemicals. These effects were evident in both the 7- or 14-d exposures. The lowest observed effect concentration (LOEC) determined from studies with the four chemicals showed that neither survival nor reproduction was consistently the more sensitive endpoint for either C. dubia or D. magna. The LOECs for r were the same for both exposure durations for each species. The data from this study demonstrate that the calculations of r from chronic toxicity data can provide equally sensitive bioassay results for protecting the environment, while eliminating conflicting interpretations of toxicant effects on separate endpoints. Furthermore, statistical decisions drawn from comparisons of the toxicity of exposure concentrations with the controls may not provide the most ecologically meaningful criteria for environmental protection. 103 refs., 16 figs., 15 tabs.

7804 (ETDE-mf-2750197) **Development of a test system for the inspection of the phytotoxicity of gases.** Koennecker, G. Technische Univ. Braunschweig (Germany). Naturwissenschaftliche Fakultaet. 20 Dec 1989 156p. (In German). Order Number DE92750197. Source: OSTI; NTIS (US Sales Only).

On the basis of the Continuous Stirred Tank Reactor (CSTR) design, a standard test system with which the toxic effect of gases on higher plants can be checked was developed. Multiple units of the exposure system can be added to a central air control for fresh-air and off-air blowers. The simple construction guarantees a problem-free reconstruction and an easy handling of the system. The dose/effect experiments were carried out with Phaseolus vulgaris and Zea mays and sulphur dioxide. Effect criteria for the plant reaction were the yield parameters: fresh weight and dry weight; sprout/root ratio; fresh weight/dry weight ratio; transpiration coefficient; sulphur concentration. Three-week application of sulphur dioxide caused in the case of the dwarf french bean a significant reduction of the yield parameters. The exposed maize plants, on the other hand, partly reacted to the gas exposure with a clear stimulation of some of the yield parameters. In the case of most yield parameters, there was a linear relationship between the applied toxic gas concentration and the observed plant reaction. (orig./VHE).

7805 (PNL-7600-Pt.1, pp. 91-95) **Molecular events during tumor initiation.** Springer, D.L. Pacific Northwest Lab., Richland, WA (United States). Jun 1991. In *Pacific Northwest Laboratory annual report for 1990 to the DOE Office of Energy Research. Part 1, Biomedical sciences.* 151p. Order Number DE91015807. Source: OSTI; NTIS.

Many in vitro studies have been conducted with benzo[a]pyrene diol-epoxide (BPDE) binding to DNA; in vivo, however, this binding may be altered by association of numerous proteins with the DNA. The fundamental unit of DNA in chromatin is the nucleosome, where the DNA wraps around a core of histone proteins. At this level, the DNA lies on the surface of the protein core particles, and this association protects the DNA from nucleases. An unanswered question is: Does this close association between DNA and proteins protect the DNA from damage by chemical carcinogens or radiation? Studies with very small molecules such as dimethyl sulfate have indicated unrestricted access to the nucleosomal DNA, whereas larger molecules may bind preferentially to naked DNA over nucleosomal DNA. Because BPDE is a large bulky carcinogen, it may bind differently to chromatin compared to naked DNA. Further, BPDE intercalates into the DNA prior to covalently binding to the exocyclic amino groups of deoxyguanosine or deoxyadenine. This suggests that the influence of BPDE binding on chromatin structure may be critical to tumor initiation and progression. Thus, the purpose of the authors work includes determining: (1) the location and frequency of BPDE adducts to naked versus nucleosomal DNA; (2) the influence of BPDE adducts on nucleosome positioning; and (3) whether these adducts alter the expression of genes.

7806 (PNL-SA-19355) **US Department of Energy participation in the development of emergency response planning guidelines: The program and process.** Munson, L.H.; Holder, B.W. Pacific Northwest Lab., Richland, WA (United States). Oct 1991. 12p. Sponsored by U.S. DOE Nuclear Energy. DOE Contract AC06-76RL01830. (CONF-911043-4: 30. Hanford symposium on health and the environment: current topics in occupational health, Richland, WA (United States), 29 Oct - 1 nov 1991). Order Number DE92004506. Source: OSTI; NTIS; GPO Dep.

Emergency response levels and protective action guides for incidents that could expose the public to an accidental release of radiation have been developed and used for many years. Similar attention, has not been focused on hazards from potential chemical releases. The tragic incident in Bhopal, India, in which over 2000 people died and many suffered irreversible health damage, has heightened concern worldwide about real and potential releases of chemicals. This concern, and the resultant re-evaluation by many companies, has demonstrated a need for similar guidelines for dealing with chemical hazards; such guidance would aid significantly in plant design and community planning. To address the need for reliable, consistent, and well-documented emergency planning guidelines, a program of Emergency Response Planning Guidelines (ERPGs) was established by Organization Resources Counselors, Inc. (ORC). ORC, working through established task forces and the American Industrial Hygiene Association (AIHA), oversees ERPG development. This paper describes the program established for developing and issuing ERPGs and the process within DOE for providing support.

57 HEALTH AND SAFETY

7807 (DOE/OR/00033-T455) **Hard-surface contamination detection exercise.** Kawa, S. Michigan Univ., Ann Arbor, MI (United States). 1991. 200p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-76OR00033. Order Number DE92004750. Source: OSTI; NTIS; GPO Dep.

The purpose of this thesis is to create a practical exercise which demonstrates the techniques used by Health Physicists to detect surface contamination, including both instrumentation and smear survey techniques. By understanding the basic principles of the most commonly found instruments the intent is that a new Health Physics graduate can correctly choose, and apply an instrument to their detection situation. The exercise is also intended to acquaint students with the very basic principles of smear techniques. Smear surveys are probably the most universally applied technique in this industry, however, very little literature exists on the subject. The techniques are usually taught, on-the-job and by demonstration. By their seeing and participating in this presentation, it is intended that Health Physics students can accelerate their first few weeks at their new careers, and enable them to recognize common mistakes. Health Physicists are expected to have knowledge of the basic practices of their profession. This exercise will allow Health Physics students to become familiar with the use of hand-held detection devices and the technique of smear surveys. Adequate measurement and recording of surface contamination information is necessary to: meet licensing requirements; protect the health and safety of the workers; maintain accurate records in the case of litigation or dose reconstruction; and maintain high levels of professional competency. This exercise will assist students in obtaining the skills necessary to adequately measure and record levels of surface contamination. 41 refs., 14 figs., 2 tabs.

7808 (PNL-SA-20116) **Occupational safety and health training in DOE.** Farabaugh, M.J. (Pacific Northwest Lab., Richland, WA (United States)); O'Dell, C. Pacific Northwest Lab., Richland, WA (United States). Nov 1991. 6p. Sponsored by U.S. DOE Environment Safety & Health. DOE Contract AC06-76RL01830. (CONF-9111126-6: 15. annual TRADE (training resources and data exchange) conference, St. Petersburg, FL (United States), 18-20 Nov 1991). Order Number DE92004502. Source: OSTI; NTIS; GPO Dep.

Occupational safety and health (OSH) policies, programs and activities within DOE are changing rapidly. In June 1989, Secretary of Energy Watkins launched his "Ten Point Initiative" charting a new course for the Department of Energy (DOE) toward full accountability in the areas of environment, safety and health. Full compliance with Occupational Safety and Health Administration (OSHA) standards is now mandatory within the Department. Independent "Tiger Teams" are performing safety and health compliance assessments at DOE facilities to identify OSH deficiencies. A recent extensive OSHA audit of DOE OSH programs and related activities has resulted in additional changes in DOE OSH requirements. These changes coupled with those pending in the proposed OSHA Reform Act, have had, and will continue to have, a tremendous impact on the roles and responsibilities each of us has within DOE, particularly in the area of OSH training. This presentation focuses on the specific implications these changes have relating to OSH Training Requirements.

7809 (CONF-8909163-15) **Structural relations within the Paleozoic basement of the mine mountain block; implications for interpretation of gravity data in Yucca Flat, Nevada Test Site.** Cole, J.C.; Wahl, R.R.; Hudson, M.R. Geological Survey, Denver, CO (United States). [1989]. 26p. Sponsored by U.S. DOE Office of Environmental Restoration and Waste Management. DOE Contract AI08-86NV10583. From 5. symposium on containment of underground nuclear explosions; Santa Barbara, CA (United States); 19-21 Sep 1989. Order Number DE92004281. Source: OSTI; NTIS; GPO Dep.

Detailed geological mapping in the Mine Mountain block between Yucca Flat and Mid Valley demonstrates that most of the low-angle fault contacts between various Palezoic rock units are the result of Tertiary near-surface block sliding, contrary to the long-held notion that the principal structural control derives from late Mesozoic thrusting during the Sevier orogeny. When structural and stratigraphic features of the hangingwall rocks above these low-angle faults are compared to similar data for the footwall rocks beneath, no evidence is found for the systematic patterns and three-dimensional relationships that characterize thrusted terranes of the Sevier in southern Nevada. If the exposed relations at Mine Mountain are extrapolated as a general structural model for the Palezoic rocks of the area, then the distribution of rock types in the subsurface is much less predictable than with the Mesozoic thrust model. Disconnected and stratigraphically unrelated sheets of diverse Paleozoic rocks may overlie the Eleana eastward to the Carpetbag fault, and possibly beyond. The traditional interpretation of Yucca Flat gravity data is that local gradients correspond to scarps (elevation discontinuities) in the buried top of the Paleozoic basement.

The conservative approach for containment considerations requires that these scarps be inferred to mark the traces of high-angle faults. The Mine Mountain model, however, allows that lateral gravity gradients may be due to lateral density variations in Paleozoic rocks (resulting from the mid-Tertiary sliding), and may have no tectonic significance for the overlying volcanic and alluvial materials. Model calculations show that realistic assumptions for slide-sheet thickness and density contrast can account for observed gravity gradients for a range of burial depths. 33 refs., 10 figs.

7810 (CONF-8909163–17) **Paleostress investigation near Rainier Mesa, Nevada Test Site.** Minor, S.A. Geological Survey, Denver, CO (United States). [1989]. 26p. Sponsored by U.S. DOE Office of Environmental Restoration and Waste Management. DOE Contract AI08-86NV10583. From 5. symposium on containment of underground nuclear explosions; Santa Barbara, CA (United States); 19-21 Sep 1989. Order Number DE92004279. Source: OSTI; NTIS; GPO Dep.

Knowledge of the fault-kinematic and paleostress histories in the Rainier Mesa/Yucca Flat region can be beneficial to containment scientists in understanding the effects of natural faults on containment of nuclear detonations. Fault-slip data were collected from 444 small-displacement (0.1–10 m) faults cutting 16-11 Ma tuffs and tuffaceous sedimentary rocks in nine areas mainly along the south, east, and northeast flanks of Rainier Mesa to investigate the faulting and paleostress history in the region. Two of the faults appear to have been test-reactivated as tension cracks and may have also experienced renewed shear displacement. One to three different stress solutions were computed from data collected in seven of the measurement areas. From cross-cutting relations of faults and faulted stratigraphic units, the relative age of many of the computed stress regimes and associated faults were determined. Using stratigraphic constraints and similarities in stress results, a relative stress- regime and faulting sequence was constructed for the study region. Fracturing observed after nuclear explosions is influenced by the structural arrangement of preexisting faults and joints and by the current regional stress field.

7811 (CONF-8909163–18) **Paleomagnetic evaluation of the Yucca-Frenchman Flexure, southern Nevada.** Hudson, M.R. Geological Survey, Denver, CO (United States). [1989]. 14p. Sponsored by U.S. DOE Office of Environmental Restoration and Waste Management. DOE Contract AI08-86NV10583. From 5. symposium on containment of underground nuclear explosions; Santa Barbara, CA (United States); 19-21 Sep 1989. Order Number DE92004278. Source: OSTI; NTIS; GPO Dep.

The eastern margin of the Yucca Flat basin, southern Nevada, is bounded by north-northwest-striking tilted fault blocks of the Halfpint Range that curve as much as 90° clockwise into east-northeast strikes in the French Peak-Massachusetts Mountain (FPMM) area. This pattern of arcuate structures was termed the Yucca Frenchman flexure by previous workers who attributed the arcuate pattern to clockwise drag along a proposed northwest-trending, right-lateral shear zone. The flexure model implies that rocks within the FPMM area have been rotated strongly clockwise about a vertical axis. Paleomagnetic data indicate no systematic vertical-axis rotation in the FPMM area and disprove the flexure model. After tilt correction, declinations of 30 site means obtained from the three ash-flow sheets in the FPMM area are more dispersed, but not systematically different than declinations of 12 site means from the Halfpint Range or declinations of 10 site means from little deformed reference areas to the west (Rainier and Pahute Mesas, Shoshone and northern Yucca Mountains). Paleomagnetic data indicate that structures in the FPMM area initiated with arcuate trends; not as originally straight elements that were rotated by right-lateral drag. The structures must have formed under the influence of locally different orientations and (or) ratios of principal stresses. The French Peak-Massachusetts Mountain area lies in an accommodation zone between domains of predominantly west- and east-tilted Miocene and Pliocene extensional fault blocks to the north and south, respectively. I suggest that local interaction between stress fields associated with fault zones that simultaneously propagated from north and south into the accommodation zone may have been responsible for the arcuate structures in the FPMM area.

7812 (DOE/ER/13667–T4) **Isotopic studies of rare gases in terrestrial samples and natural nucleosynthesis: Progress report.** California Univ., Berkeley, CA (United States). Dept. of Physics. May 1991. 10p. Sponsored by U.S. DOE Energy Research. DOE Contract FG03-87ER13667. Order Number DE92003468. Source: OSTI; NTIS; INIS; GPO Dep.

This project is concerned with research in rare gas mass spectrometry. Using a two-pronged attack, we study fluids using a system (RARGA) designed for fluid analysis in bulk which is sometimes deployed in the field and a laser microprobe mass spectrometer for fluid inclusion studies. In 1991 the RARGA project continued monitoring helium isotope variations associated with renewed seismic activity in Long Valley Caldera and expanded our geothermal data base to include Lassen National Park. An important objective, continuing in 1992, is to understand better the reasons for somewhat elevated ^{3}He/^{4}He ratios in regions where there is no contemporary volcanism which could produce the effect by addition of mantle helium. To this end, 1991 saw continued efforts to understand variations in composition between fluids and associated reservoir rocks and extended the data base to include fluids from the Gulf of Mexico. Our DOE work in calibrating a sensitive laser microprobe mass spectrometer for noble gases in fluid inclusions continues with successful returns particularly in calibrating neutron irradiated samples for tracing halogen ratios. In connection with observations of neutron-produced noble gas nuclides in granites, we have begun comparing measurements with calculations for both thermal and epithermal neutrons. We submitted a third paper on noble gases in diamonds, concentrating on observed effects of ^{4}He, ^{3}He, and fission xenon implantation from nuclear processes in adjacent material in the matrix rock. 16 refs., 1 tab.

7813 (DOE/ER/13796–1) **Geologic spatial analysis: 1988 performance report, August 30, 1987–January 30, 1989.** Thiessen, R.L.; Eliason, J.R. Washington State Univ., Pullman, WA (United States). Dept. of Geology. [1989]. 19p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-87ER13796. Order Number DE92003436. Source: OSTI; NTIS; GPO Dep.

This report describes the development of geologic spatial analysis research which focuses on conducting comprehensive three-dimensional analysis of regions using geologic data sets that can be referenced by latitude, longitude, and elevation/depth. (CBS)

7814 (DOE/ER/13807–T1) **CSDP: Seismology of continental thermal regime: Progress report, June 1, 1988–April 30, 1989.** Aki, K. University of Southern California, Los Angeles, CA (United States). Center for Earth Sciences. Apr 1989. 77p. Sponsored by U.S. DOE Energy Research. DOE Contract FG03-87ER13807. Order Number DE92003394. Source: OSTI; NTIS; GPO Dep.

This is a progress report for the past one year of research (year 2 of 5-year project) under the project titled "CSDP: Seismology of Continental Thermal Regime", in which we proposed to develop seismological interpretation theory and methods applicable to complex structures encountered in continental geothermal areas and apply them to several candidate sites for the Continental Scientific Drilling Project. During the past year, two Ph.D. thesis works were completed under the present project. One is a USC thesis on seismic wave propagation in anisotropic media with application to defining fractures in the earth. The other is a MIT thesis on seismic Q and velocity structure for the magma-hydrothermal system of the Valles Caldera, New Mexico. The P.I. co-organized the first International Workshop on Volcanic Seismology at Capri, Italy in October 1988, and presented the keynote paper on the "state-of-art of volcanic seismology". We presented another paper at the workshop on "Assorted Seismic Signals from Kilauea Volcano, Hawaii. Another international meeting, namely, the Chapman Conference on seismic anisotropy in the earth's crust at Berkeley, California in May 1988, was co-organized by the co-P.I. (P.C.L), and we presented our work on seismic waves in heterogeneous and anisotropic media. Adding the publications and presentations made in the past year to the list for the preceding year, the following table lists 21 papers published, submitted or presented in the past two years of the present project. 65 refs., 334 figs., 1 tab.

7815 (DOE/ER/13807–T2) **CSDP: The seismology of continental thermal regimes: Progress report, May 1, 1989–April 30, 1990.** Aki, K. University of Southern California, Los Angeles, CA (United States). Center for Earth Sciences. May 1990. 44p. Sponsored by U.S. DOE Energy Research. DOE Contract FG03-87ER13807. Order Number DE92003393. Source: OSTI; NTIS; GPO Dep.

This is a progress report for the past one year of research (year 3 of 5-year project) under the project titled "CSDP: Seismology of Continental Thermal Regime", in which we proposed to develop seismological interpretation theory and methods applicable to complex structures encountered in continental geothermal areas and apply them to several candidate sites for the Continental Scientific Drilling Project. The past year has been extremely productive especially in the area of interpretation theory, including the following two major break-throughs. One is the derivation of an integral equation for time-dependent power spectra, which unified all the existing theories on seismic scattering (including the radiative transfer theory for total energy and single and multiple scattering theories based on the ray approach) and offers more complete and economical solutions to the problems of seismic scattering and attenuation. The other is the new formula for synthetic seismograms for layered media with irregular interfaces, combining the T-matrix method for an arbitrary shaped inclusion and the method of global generalized reflection/transmission coefficients for layered media. Both breakthroughs will enable us to deal with seismic observations in complex earth structures more efficiently and accurately. In the area of experimental studies, we discovered seismic guided waves trapped in the San Andreas fault near Parkfield, California. 54 refs., 14 figs.

7816 (DOE/ER/13807–T3) **CSDP: The seismology of continental thermal regimes: Progress report, May 1, 1990–April 30, 1991.** Aki, K. University of Southern California, Los Angeles, CA (United States). Center for Earth Sciences. May 1991. 46p. Sponsored by U.S. DOE Energy Research. DOE Contract FG03-87ER13807. Order Number DE92003392. Source: OSTI; NTIS; GPO Dep.

The past year continued to be extremely productive following up two major breakthroughs made in the preceding year. One of the breakthroughs was the derivation of an integral equation for time-dependent power spectra, which unified all the existing theories on seismic scattering including the radiative transfer theory for total energy and single-multiple scattering theories based on the ray approach. We successfully applied the method to the data from the USGS regional seismic arrays in central California, Long Valley and Island of Hawaii, and obtained convincing results on the scattering Q^{-1} and intrinsic Q^{-1} in these areas for the frequency range from 1 Hz to 20 Hz. The frequency dependence of scattering Q^{-1} is, then, interpreted in terms of random medium with continuous or discrete scatterers. The other breakthrough was the application of T-matrix formulation to the seismic scattering problem. We are currently working on 2-dimensional inclusions with high and low velocity contrast with the surrounding medium. In addition to the above two main lines of research, we were able to use so-called "T-phase" observed on the Island of Hawaii to map the Q value with a good spatial resolution. We found that we can eliminate remarkably well the frequency dependent recording site effect from the T-phase amplitude using the amplification factor for coda waves, further confirming the fundamental separability of source, path and site effects for coda waves, and proving the effectiveness of stochastic modeling of high-frequency seismic waves. 70 refs., 24 figs.

7817 (DOE/ER/13840–2) **Workshop on quantitative dynamic stratigraphy: Final conference report.** Cross, T.A. Colorado School of Mines, Golden, CO (United States). Apr 1988. 18p. Sponsored by U.S. DOE Energy Research; National Science Foundation; Gas Research Institute; U.S. Geological Survey. DOE Contract FG02-88ER13840. (CONF-8802133–Summ.: Workshop on quantitative dynamic stratigraphy, Sedalia, CO (United States), 14-18 Feb 1988). Order Number DE92004246. Source: OSTI; NTIS; GPO Dep.

This document discusses the development of quantitative simulation models for the investigation of geologic systems. The selection of variables, model verification, evaluation, and future directions in quantitative dynamic stratigraphy (QDS) models are detailed. Interdisciplinary applications, integration, implementation, and transfer of QDS are also discussed. (FI)

7818 (DOE/ER/60574–T1) **Toward an understanding of global change: Initial priorities for US contributions to the International Geosphere-Biosphere Program.** National Research Council, Washington, DC (United States). Committee on Global Change. 1988. 213p. Sponsored by U.S. DOE Energy Research; U.S. Department of Defense; National Aeronautics and Space Administration; National Science Foundation; National Oceanic and Atmospheric Administration; U.S. Geological Survey. DOE Contract AI01-87ER60574. Contract OCE 8713699. Order Number DE92004303. Source: OSTI; NTIS; GPO Dep.

In the international scientific community, the International Council of Scientific Unions has organized the International Geosphere Biosphere Program (IGBP) to address the problems of global change. The objective of the IGBP is to describe and understand the interactive physical, chemical and biological processes that regulate the total earth system, the unique environment that it provides for life, the changes that are occurring in this system, and the manner in which they are influenced by human activities. The IGBP is currently in its preparatory phase, during which the program's goals and research components are slowly evolving and coming into focus. In this report, a limited number of high-priority research initiatives are recommended for early implementation as part of the US contribution to the preparatory phase of the IGBP. The recommendations are based on the committee's analysis of the most critical gaps, not being addressed by existing programs, in the scientific knowledge needed to understand the changes that are occurring in the earth system on time scales of decades to centuries. These initiatives will build upon the capabilities of the US program in global change.

7819 (LBL–30850) **Summary of the presentations at the international workshop on reducing carbon dioxide emissions from the developing world: Assessment of benefits, costs and barriers.** Sathaye, J.; Goldman, N. (eds.). Lawrence Berkeley Lab., CA (United States). Jun 1991. 50p. Sponsored by U.S. DOE Energy Research; Environmental Protection Agency. DOE Contract AC03-76SF00098. (CONF-9010449–Summ.: Workshop on reducing carbon emissions from the developing world: assessment of benefits, costs and barriers, Berkeley, CA (United States), 4-6 Oct 1990). Order Number DE92004171. Source: OSTI; NTIS; INIS; GPO Dep.

The "International Workshop on Reducing Carbon Dioxide Emissions from the Developing World: Assessment of Benefits, Costs and Barriers" was the second workshop held as part of a project being conducted by the International Energy Studies Group of Lawrence Berkeley Laboratory, in collaboration with experts from leading institutions across the developing world. The goal of the project is to analyze long-range energy consumption in developing countries and its potential contribution to global climate change. The US Environmental Protection Agency (EPA) is supporting this work, the results of which already have made a key contribution to the technical analysis being used as the basis for discussion by the Energy and Industry Sub-group of the Intergovernmental Panel on Climate Change (IPCC). The main purpose of this workshop was two-fold: (1) to discuss the feasibility of implementing the efficiency improvements and fuel switching measures incorporated into the long-term energy scenarios created for 17 developing countries and (2) to examine the costs and benefits of reducing energy-related carbon dioxide emissions generated by developing countries.

7820 (MPL-U–17/89) **[Studies of non-linear dynamics of dissipative systems]: [Final report, April 1, 1988–October 31, 1989].** Abarbanel, D.I. Scripps Institution of Oceanography, La Jolla, CA (United States). 10 Sep 1990. 5p. Sponsored by U.S. DOE Energy Research. DOE Contract FG03-86ER13502. Order Number DE92004772. Source: OSTI; NTIS; GPO Dep.

In the period of this grant I worked on three main areas: (1) Symmetries in inviscid flow equations in one, two, and three dimensions and related nonlinear stability theorems for these flows; (2) applications of Hamiltonian mechanics to the problems of shallow water equations and internal wave dynamics in oceanic flows;

and, (3) analysis of signals from chaotic systems with an eye toward learning how to build models of chaotic systems in nature.

7821 (ORNL/ER/Sub–90-KA931/2) **Floodplain and wetlands assessment of the White Oak Creek Embayment.** Oak Ridge National Lab., TN (United States); CDM Federal Programs Corp., Oak Ridge, TN (United States). Jul 1991. 29p. Sponsored by U.S. DOE Office of Environmental Restoration and Waste Management. DOE Contract AC05-84OR21400. Order Number DE92003674. Source: OSTI; NTIS; GPO Dep.

This report describes the proposed methods for dealing with contaminants that have accumulated in White Oak Creek, White Oak Lake, and the White Oak Creek Embayment as a result of process releases and discharges from the Oak Ridge National Laboratory. Alternative methods of cleaning up the area which were considered in accordance with regulatory guidelines are listed, and information supporting the selected methods is provided. Also included are results of a site survey conducted at the White Oak Creek Embayment and the expected effects of the proposed control structures on the floodplain and wetlands. The appendix contains figures showing the nine cross-sections of the stream channel surveyed during studies of the White Oak Creek area.

7822 (UCID–20879) **Research and validation of seismic data from the Regional Seismic Test Network.** Nakanishi, K.K. Lawrence Livermore National Lab., CA (United States). 1988. 53p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. Order Number DE92004465. Source: OSTI; NTIS; GPO Dep.

Lawrence Livermore National Laboratory routinely conducts studies of the validity of seismic data obtained from the Department of Energy's Regional Seismic Test Network (RSTN). This paper is a report of work done from 1981 through 1985 using data from the RSTN. The results were first documented as internal memos, and this report is a compilation of all related memos during this period.

7823 (UCRL-JC–108853) **The computer hardware advanced mathematics and model physics (CHAMMP) climae modeling program.** Bader, D.C. (Pacific Northwest Lab., Richland, WA (United States)); MacCracken, M.C.; Malone, R.C. Lawrence Livermore National Lab., CA (United States). Nov 1991. 5p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-48. (CONF-9101125–1: 3. symposium for global change studies, Atlanta, GA (United States), 5-10 Jan 1991). Order Number DE92004671. Source: OSTI; NTIS; GPO Dep.

Improved methods for predicting the world's future climate and the potential climate change caused by anthropogenic activities are needed to guide domestic and international energy policy formulation. Current general circulation models (GCMs) of the atmosphere and ocean that form the basis for climate projections are useful, but lack treatment of interactions among the atmosphere, ocean, cryosphere and land surface; the inadequate representation of key processes such as radiative transfer and cloud development; and relatively coarse spatial resolution. The demands that must be met by future climate models have been established in the development of the US Global Change Research Program (USGCRP) and their importance is evidenced by the designation of Climate Modeling and Prediction as one of the four high priority integrating themes of the Program. The US DOE CHAMMP Program is a multiyear climate modeling research program designed to bring the computational power of emerging computer systems to further climate research. This requires true multidisciplinary collaboration among climate scientists, applied mathematicians and computer scientists. Since the ultimate goal is to provide better scientific prediction, research is also directed toward estimating the limits of climate predictability and the uncertainty of model results. Through interactions with other programs of the USGCRP and US High Performance Computing and Communications Program (HPCC), it will contribute to more definitive projections of climate change to aid in the formulation of national and international energy policy.

7824 (UCRL–53868-90, pp. 1.1-1.5) **Computational electromagnetics and large parallel-processing computers.** Madsen, N.K. Lawrence Livermore National Lab., CA (United States). Aug 1991. In *Engineering research and development thrust area report, FY 90.* 246p. Order Number DE92000519. Source: OSTI; NTIS (US Sales Only).

To improve the author's ability to analyze larger and larger problems of electromagnetic scattering, coupling, and propagation, he has begun to study the use of parallel-processing computers (PPCs) for numerically solving Maxwell's curl equations in the time domain. He has considered the use of both shared memory and distributed memory computer architectures and have concluded that the greatest performance gains in the near future will be with distributed memory machines. He has developed new and better algorithms for solving Maxwell's equations using unstructured grids and demonstrated their performance scalability on several distributed-memory PCCs. He has implemented a three-dimensional structured-grid version of a new algorithm on the distributed-memory, 128-processor Intel IPSC/i 860 PPC. He has also studied the possible use of a new, independent time-step method for use with the new algorithms and found this approach to be lacking in overall efficiency on shared-memory machines.

7825 (UCRL-JC–108128) **Helmholtz beam propagation by the method of Lanczos reduction.** Fleck, J.A. Jr. Lawrence Livermore National Lab., CA (United States). 6 Aug 1991. 12p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-9109230–10: SPIE meeting, Boston, MA (United States), 3-6 Sep 1991). Order Number DE92003974. Source: OSTI; NTIS; GPO Dep.

The solution of the Helmholtz wave equation requires the application of an exponentiated square root operator to an initial field. This operation is greatly facilitated by the introduction of a representation in which the aforementioned operator is diagonal. The Lanczos method allows the diagonalization to be performed in a low dimensional space, e.g., of the order of 4-6, if one is interested in advancing the field over a limited propagation step of length Δz. Although some boundary conditions may be ill-posed for the unapproximated Helmholtz equation, in the sense that certain plane wave components cannot propagate in the forward direction, the Lanczos method damps all of these components exponentially, thus guaranteeing the correctness of the solution. 8 refs.

7826 (DESY–91-082) **Staircase functions, spectral regidity and a rule for quantizing chaos.** Aurich, R. (Hamburg Univ. (Germany). 2. Inst. fuer Theoretische Physik); Steiner, F. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). Jul 1991. 20p. Contract DFG Ste 241/4-3. Order Number DE92758902. Source: OSTI; NTIS (US Sales Only); INIS.

Considering the Selberg trace formula as an exact version of Gutzwiller's semiclassical periodic-orbit theory in the case of the free motion on compact Riemann surfaces with constant negative curvature (Hadamard-Gutzwiller model), we study two complementary basic problems in quantum chaology: the computation of the calssical staircase N(l), the number of periodic orbits with length shorter than l, in terms of the quantal energy spectrum $\{E_n\}$, the computation of the spectral staircase N (E), the number of quantal energies below the energy E, in terms of the length spectrum $\{l_n\}$ of the classical periodic orbits. A formulation of the periodic-orbit theory is presented which is intrinsically unsmoothed, but for which an effective smoothing arises from the limited 'input data', i.e. from the limited knowledge of the periodic orbits in the case of N(E) and the limited knowledge of quantal energies in the case of N(l). Based on the periodic-orbit formula for N(E), we propose a new rule for quantizing chaos, which simply states that the quantal energies are determined by the zeros of the function $\xi_1(E) = \cos(\pi N(E))$. The formulas for N(l) and N(E) as well as the new quantization condition are tested numerically. Furthermore, it is shown that the staircase N(E) computed from the length spectrum yields (up to a constant) a good description of the spectral rigidity $\Delta_3(L)$, being the first numerical attempt to compute a statistical property of the quantal energy spectrum of a chaotic system from classical periodic orbits. (orig.).

7827 (IC–91/248) **Hawking-like effects: Towards experiments.** Rosu, H. International Centre for Theoretical Physics, Trieste (Italy). Aug 1991. 23p. Order Number DE92614127. Source: OSTI; NTIS (US Sales Only); INIS.

We discuss the proposals made to detect Hawking radiation and Unruh radiation, and make brief comments on each of them. (author). 95 refs.

7828 (IC–91/258) **Inequivalence of interior and exterior dynamical problems.** Santilli, R.M. International Centre for Theoretical Physics, Trieste (Italy). Sep 1991. 14p. Order Number DE92615214. Source: OSTI; NTIS (US Sales Only); INIS.

We begin a series of notes with the review of the historical distinction by Lagrange, Hamilton, Jacobi and other Founding Fathers of analytic dynamics, between the exteriordynamical problem, consisting of motion in vacuum under action-at-a-distance interactions, and the interior dynamical problem, consisting of motion within a resistive medium with the additional presence of contact, nonlinear, nonlocal and nonhamiltonian internal forces. After recalling some of the historical reasons that led to the contemporary, virtually complete restriction of research to the exterior problem, we show that the interior dynamical problem cannot be reduced to the exterior one. This establishes the open character of the central objective of these notes: the identification of the space-time symmetries and relativities that are applicable to interior, nonlinear, nonlocal and nonhamiltonian systems. (author). 29 refs.

7829 (IC–91/265) **The notion of nonrelativistic isoparticle.** Santilli, R.M. International Centre for Theoretical Physics, Trieste (Italy). Sep 1991. 19p. Order Number DE92615215. Source: OSTI; NTIS (US Sales Only); INIS.

We introduce the notion of nonrelativistic isoparticle as a representation of a Galilei-isotopic symmetry studied in preceding works or, equivalently, as the generalization of the conventional notion of particle characterized by the isotopic liftings of the unit. We show that the lifting represents the transition from massive points moving in vacuum to extended-deformable particles moving within physical media. As explicit examples, we work out the cases of an extended-deformable particle: 1) in free conditions; 2) under external potential-selfadjoint interactions; and 3) under external potential-selfadjoint and nonhamiltonian-nonselfadjoint interactions. The emerging methods are applied to a first classical and nonrelativistic treatment of Rauch's experiments on the spinorial symmetry of thermal neutrons under external (magnetic and) nuclear fields. The notion nonrelativistic isoquark is submitted as a conceivable classical basis for future operator studies. (author). 12 refs, 1 fig.

7830 (IC–91/266) **Lie-admissible structure of Hamilton's original equations with external terms.** Santilli, R.M. International Centre for Theoretical Physics, Trieste (Italy). Sep 1991. 13p. Order Number DE92615216. Source: OSTI; NTIS (US Sales Only); INIS.

As a necessary additional step in preparation of our operator studies of closed nonhamiltonian systems, in this note we consider the algebraic structure of the original equations proposed by Lagrange and Hamilton, those with external terms representing precisely the contact nonpotential forces of the interior dynamical problem. We show that the brackets of the theory violate the conditions to characterize any algebra. Nevertheless, when properly written, they characterize a covering of the Lie-isotopic algebras called Lie-admissible algebras. It is indicated that a similar occurrence exists for conventional operator treatments, e.g. for nonconservative nuclear cases characterized by nonhermitean Hamiltonians. This occurrence then prevents a rigorous treatment of basic notions, such as that of angular momentum and spin spin, which are centrally dependent on the existence of a consistent algebraic structure. The emergence of the Lie-admissible algebras is therefore expected to be unavoidable for any rigorous operator treatment of open systems with nonlinear, nonlocal and nonhamiltonian external forces. (author). 14 refs, 1 fig.

7831 (IC–91/272) **Sheaves of Schwartz distributions.** Damyanov, B.P. International Centre for Theoretical Physics, Trieste (Italy). Sep 1991. 29p. Order Number DE92615217. Source: OSTI; NTIS (US Sales Only); INIS.

The theory of sheaves is a relevant mathematical language for describing the localization principle, known to be valid for the Schwartz distributions (generalized functions). After introducing some fundamentals of sheaves and the basic facts about distribution spaces, the distribution sheaf D_Ω of topological C-vector spaces over an open set Ω in R^n is systematically studied. A sheaf D_M of distributions on a C^∞-manifold M is then introduced, following a definition of Hoermander's for its particular elements. Further, a general definition of sheaves on a manifold, that are locally isomorphic to (or, modelled on) a sheaf on R^n, in proposed. The sheaf properties of D_M are studied and this sheaf is shown to be locally isomorphic to D_Ω, as a sheaf of topological vector spaces. (author). 14 refs.

7832 (IC–91/273) **The 4-vertex theorem for convex curves R^3.** Sedykh, V.D. International Centre for Theoretical Physics, Trieste (Italy). Sep 1991. 7p. Order Number DE92615218. Source: OSTI; NTIS (US Sales Only); INIS.

It is a well-known fact that any smooth closed plane curve with nowhere vanishing curvature has at least four vertices (local extremum points of its curvature). A generalization of this statement for the case of space curves is known as a conjecture of P. Scherk. Here we sketch the proof of this conjecture. (author). 5 refs.

7833 (IC–91/274) **Lax representation does not mean complete integrability.** Gerdjikov, V.S. International Centre for Theoretical Physics, Trieste (Italy). Sep 1991. 11p. Order Number DE92614128. Source: OSTI; NTIS (US Sales Only); INIS.

The gauge equivalence between the inhomogeneous versions of the nonlinear Schroedinger and the Heisenberg ferromagnet equations is studied. An unexplicit criterion for integrability is proposed. It is shown that in the nonintegrable cases the M-operators in the Lax representations possess pole singularities lying on the spectrum of the L-operators. (author). 14 refs.

7834 (IC–91/278) **Exactly soluble matrix models.** Raju Viswanathan, R. International Centre for Theoretical Physics, Trieste (Italy). Sep 1991. 9p. Order Number DE92615219. Source: OSTI; NTIS (US Sales Only); INIS.

We study examples of one dimensional matrix models whose potentials possess an energy spectrum that can be explicitly determined. This allows for an exact solution in the continuum limit. Specifically, step-like potentials and the Morse potential are considered. The step-like potentials show no scaling behaviour and the Morse potential (which corresponds to a $\gamma = -1$ model) has the interesting feature that there are no quantum corrections to the scaling behaviour in the continuum limit. (author). 5 refs.

7835 (LITH-MAT-R–89-38) **On the asymptotics of scattering phases for the Schroedinger equation.** Yafaev, D.R. (Leningrad Branch of Mathematical Institute (USSR)). Linkoeping Univ. (Sweden). Dept. of Mathematics. 22 Dec 1989. 18p. Order Number DE92614129. Source: OSTI; NTIS (US Sales Only); INIS.

Scattering phase are defined in terms of asymptotics of solutions of the Schroedinger equation behaving as standing waves at infinity. The scattering phases are connected in a simple way with the eigenvalues of the unitary operator $\Sigma = SI$ where S is the scattering matrix and I is the reflection operator. The eigenvalues of Σ can accumulate only at the points 1 and -1. It is shown that the leading terms of their asymptotics are determined only by the asymptotics of the even part of the potential at infinity. Explicit expressions for these terms are obtained. (au).

7836 (LIU-TEK-LIC–1991-26) **Quantum transport in semiconductor nanostructures and nanoscale devices.** Zhen-Li, Ji. Linkoeping Univ. (Sweden). Dept. of Physics and Measurement Technology. Sep 1991. 10p. Order Number DE92614130. Source: OSTI; NTIS (US Sales Only); INIS.

Only a decade ago the study and fabrication of electron devices whose smallest features were just under 1 micro represented the forefront of the field. Today that position has advanced an order of magnitude to 100 nanometers. Quantum effects are unavoidable in devices with dimensions smaller than 100 nanometers. A variety of quantum effects have been discovered over the years, such as tunneling, resonant tunneling, weak and strong localization, and the quantum Hall effect. Since 1985, experiments on nanostructures (dimension $<$ 100 nm) have revealed a number of new effects such as the Aharanov-Bohm effect, conductance fluctuations, nonlocal effects and the quantized resistance of point contacts. For nanostructures at low temperature, these phenomena clearly show that electron transport is influenced by wave interference effects similar to those well-known in microwave and optical networks. New device concepts now being proposed and demonstrated are based on these wave properties. This thesis discusses our study of electron transport in nanostructures. All of the quantum phenomena that we address here are essentially one-electron phenomena, although many-body effects will sometimes play a more significant role in the electronic properties of small structures. Most of the experimental observations to date are particularly well explained, at least qualitatively, in terms of the simple one-particle picture. (au).

7837 (YITP/U–91-24) **Non-perturbative effect of a modified action in matrix models.** Sawada, Shiro; Ueda, Haruhiko. Kyoto Univ., Uji (Japan). Yukawa Inst. for Theoretical Physics. May 1991. 10p. Order Number DE92750832. Source: OSTI; NTIS (US Sales Only); INIS.

A modified matrix model action, which may provide the well-defined two dimensional pure gravity theory, proposed by Das, Dhar, Sengupta and Wadia is analyzed non-perturbatively. The perturbative solution in genus expansion is also obtained. It is shown that the specific heat satisfies Painleve equation in the double scaling limit. Thus the modified action is found to be in the same universality class as ordinary matrix models. (author).

7838 (BNL–46868) **Solid neon moderated electrostatic or magnetic positron beam.** Weber, M. (Bielefeld Univ. (Germany). Fakultaet fuer Physik); Schwab, A.; Becker, D.; Lynn, K.G. Brookhaven National Lab., Upton, NY (United States). [1991]. 10p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH00016. (CONF-9107196–1: Positron satellite meeting of ICPEAC, Sydney (Australia), 3-5 Jul 1991). Order Number DE92005033. Source: OSTI; NTIS; INIS; GPO Dep.

A high intensity variable energy positron beam has been constructed at Brookhaven National Laboratory (BNL). Positrons from a 97mCi ^{22}Na source are moderated by a thin layer of solid neon. A magnetic guiding system delivered up to $5\times10^6 e^+$/sec to an experiment. Currently tests are under way to facilitate the operation with the magnetic guiding system or – for other experimental sites – with an electrostatic beam transport. The electrostatic lenses are fabricated from μ-metal. No compensation of the earth magnetic field is required. Several experiments can utilize the beam on a time sharing basis. In the near future the source will be replaced by ^{64}Cu which has a much higher activity. Beam intensities up to $10^9 e^+$/sec are expected.

7839 (INP–1404/PL, pp. 251-253) **Transmitting-receiving head for spin echo observation on frequencies above 100 MHz.** Nadolski, S. (Polska Akademia Nauk, Warsaw (Poland). Inst. Fizyki). The transmitting-receiving head for spin echo observation in helium temperatures is described. Its scheme is given. (A.S.).

7840 (KEK–90-25(v.1), pp. 247-250) **Intense negative ion source.** Mori, Yoshiharu (National Lab. for High Energy Physics, Tsukuba, Ibaraki (Japan)). National Lab. for High Energy Physics, Tsukuba, Ibaraki (Japan). Mar 1991. (CONF-9010243–: International collaboration on advanced neutron sources (ICANS), Tsukuba (Japan), 21-26 Oct 1990). In *Proceedings of the eleventh meeting of the international collaboration on advanced neutron sources (ICANS-XI).* 654p. Order Number DE92713960. Source: OSTI; NTIS (US Sales Only); INIS.

The volume H^- ion source has been developed at KEK. The H^- beam intensity was enhanced by introducing a very small amount of cesium vapor in the ion source. The extracted H^- beam current of 20 mA was obtained in the cesium-mode operation. The measured 90 % normalized beam emittance was about 1 πmm.mrad for 12 mA beam. It was found that the work function of the cesium covered surface of the beam extracting plasma electrode had an important role to enhance the H^- beam intensity. (author).

7841 (DESY–91-079) **A semiclassical approach to quantum gravity.** Salehi, H. (Hamburg Univ. (Germany). 2. Inst. fuer Theoretische Physik). Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). Jul 1991. 14p. Order Number DE92758919. Source: OSTI; NTIS (US Sales Only).

The interaction of a scalar quantum field with gravity is investigated in the semiclassical context where the space-time is treated classically. It is essentially understood as a self-interaction of the quantum field, mediated by its own states. The relevant states here are not arbitrary but are selected by the principle of equivalence which is incorporated in form of specific nonlinear constraint equations. The quantum field is then subjected to a state dependent (nonlinear) field equation. Concluding, we comment on some problems concerning the consistency of the scheme employed. (orig.).

7842 (DOE/ER/40496–1) **Measurement of solar neutrinos in Kamiokande-2: Final report, January 1, 1989–December 31, 1989.** Beier, E. Pennsylvania Univ., Philadelphia, PA (United States). Nov 1991. 8p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-89ER40496. Order Number DE92005344. Source: OSTI; NTIS; GPO Dep.

Work performed under this grant has resulted in the first direct observation of neutrinos produced by nuclear fusion reactions in the core of the sun. The quantitative results not only are the first direct confirmation that nuclear fusion is the source of solar power, but also place strong constraints on the properties of the neutrinos. During the course of the work, neutrinos from supernova SN1987a were observed. The observation of this signal confirms an important hypothesis of nuclear astrophysics, that gravitational collapse of the core of a massive star which has used up its nuclear fuel produces such as dense state of nuclear matter that neutrino emission is the principal mechanism for the escape of energy from the collapsed core.

7843 (IC–90/323) **On the spectrum of elementary type operator.** Khan, G.A. (International Centre for Theoretical Physics, Trieste (Italy)); Kyle, J. International Centre for Theoretical Physics, Trieste (Italy). Nov 1990. 5p. Order Number DE92614139. Source: OSTI; NTIS (US Sales Only); INIS.

Let H be a complex separable Hilbert space and let B(H) be the algebra of all bounded linear operators on H. Let $\{A_1,\ldots,A_n\}$ and $\{B_1,\ldots,B_n\}$ be two commuting families of self-adjoint operators in B(H). In this paper we are concerned with the investigation of the spectrum of the elementary type operator $\Gamma : B(H) \rightarrow B(H)$ defined by $\Gamma(X) = \Sigma^n{}_{i=1} A_i X B_i$ for all X in B(H). 8 refs.

7844 (IC–90/324) **Joint maximal numerical range.** Khan, G.A. (International Centre for Theoretical Physics, Trieste (Italy)); Kyle, J. International Centre for Theoretical Physics, Trieste (Italy). Nov 1990. 12p. Order Number DE92614140. Source: OSTI; NTIS (US Sales Only); INIS.

Let H be a complex Hilbert space and let B(H) be the algebra of all bounded linear operators on H. Let $T = (T_1,\ldots,T_n)$ denote an n-tuple of operators in B(H). The aim of this paper is to generalize the notion of maximal numerical range to n-tuple of operators and prove certain properties analogous to the single operator case. (author). 8 refs.

7845 (IC–90/356) **The inversion of the elements of the Clifford algebra.** Dang Khai. International Centre for Theoretical Physics, Trieste (Italy). Oct 1990. 4p. Order Number DE92614141. Source: OSTI; NTIS (US Sales Only); INIS.

The paper presents some results concerning the inversion of the elements of Clifford algebra, namely the construction of the right and left characteristic polynomials.

7846 (IC–90/458) **On some new integral differential inequalities of Gronwall-Bellman-Bihari type.** Imoru, C.O. International Centre for Theoretical Physics, Trieste (Italy). Dec 1990. 24p. Order Number DE92614142. Source: OSTI; NTIS (US Sales Only); INIS.

We establish in this paper some new Gronwall-Bellman-Bihari type integro-differential inequalities in n variables. These inequalities generalize, in some cases, the existing ones which are known to have a wide range of applications in the study of qualitative as well as quantitative properties of solutions of differential and integral equations. (author). 8 refs.

7847 (IC–91/60) **An estimate of the difference between consecutive eigenvalues.** Yang Hongcang. International Centre for Theoretical Physics, Trieste (Italy). Apr 1991. 8p. Order Number DE92615236. Source: OSTI; NTIS (US Sales Only); INIS.

Starting from the classical result obtained by Payne, Polya and Weinberger on the estimate of the difference between two consecutive eigenvalues, an attempt is made to improve these estimates. 5 refs.

7848 (IC–91/190) **Global solvability and hypoellipticity on the torus for a class of differential operators with variable coefficients.** Gramchev, T. (International Centre for Theoretical Physics, Trieste (Italy)); Popivanov, P.; Yoshino, M. International Centre for Theoretical Physics, Trieste (Italy). Jul 1991. 13p. Order Number DE92615228. Source: OSTI; NTIS (US Sales Only); INIS.

The present paper studies global hypoellipticity and global solvability on the two dimensional torus T^2 for a class of second order differential operators with variable coefficients of the type $P=(D_x-ia(x)D_y)\ (D_x-ib(x)D_y)+(a'(x)-b'(x))D_y+c(x)$. Necessary and/or sufficient conditions for global solvability and global hypoellipticity are proposed. In particular if $\mathrm{Re}a(x) \equiv 0$ and/or $\mathrm{Re}b(x) \equiv 0$ Siegel type conditions on the diophantine approximation of the averages $\int_0^{2\pi}\mathrm{Re}a(x)dx$ or/and $\int_0^{2\pi}\mathrm{Re}b(x)dx$ occur. We also indicate some results for more general class of operators and for the n-dimensional torus T^n, $n > 2$. (author). 18 refs.

7849 (IC–91/194) **Galaxies and stars: Basic building blocks of the universe.** Chu Yaoquan. International Centre for Theoretical Physics, Trieste (Italy). Jul 1991. 13p. Order Number DE92615229. Source: OSTI; NTIS (US Sales Only); INIS.

Recently there has been a rapid progress in our knowledge of the nature of the universe. Particularly, many new observational results show a strong challenge to the standard model of the universe. A selection of representative studies are reviewed, including the large scale distribution of dark matter and quasar-stellar objects (QSOs): the associations of low redshift galaxies with high redshift QSOs; the periodicity distribution of redshifts et. al. (author). 20 refs, 5 figs.

7850 (IC–91/225) **On the existence of n-dimensional indecomposable vector bundles.** Tan Xiaojiang. International Centre for Theoretical Physics, Trieste (Italy). Sep 1991. 22p. Order Number DE92615230. Source: OSTI; NTIS (US Sales Only); INIS.

Let X be an arbitrary smooth irreducible complex projective curve of genus g with $g \geq 4$. In this paper we extend the existence theorem of special divisors to high dimensional indecomposable vector bundles. We give a necessary and sufficient condition on the existence of n-dimensional indecomposable vector bundles E with $\deg(E) = d$, $\dim H^0(X,E) \geq h$. We also determine under what condition the set of all such vector bundles will be finite and how many elements it contains. (author). 9 refs.

7851 (IC–91/236) **Harmonic analysis and global solvability of a differential operator invariant on motion groups and semi-simple Lie groups.** El-Hussein, K. International Centre for Theoretical Physics, Trieste (Italy). Aug 1991. 40p. (In French). Order Number DE92615231. Source: OSTI; NTIS (US Sales Only); INIS.

Let V be a real finite dimensional vector space and let K be a connected compact Lie group, which acts on V by means of a continuous linear representation ρ. Let $G=V\ x_\rho\ K$ be the motion group which is the semi-direct product of V by K and let P be an invariant differential operator on G. In this paper we give a necessary and sufficient condition for the global solvability of P on G. Now let G be a connected semi-simple Lie group with finite centre and let P be an invariant differential operator on G. We give also a necessary and sufficient condition for the global solvability of P on G. (author). 8 refs.

7852 (IC–91/237) **Strong density of a class of simple operators.** Somasundaram, S.; Mohammad, N. International Centre for Theoretical Physics, Trieste (Italy). Aug 1991. 9p. Order Number DE92615232. Source: OSTI; NTIS (US Sales Only); INIS.

An algebra of simple operators has been shown to be strongly dense in the algebra of all bounded linear operators on function spaces of a compact (not necessarily abelian) group. Further, it is proved that the same result is also true for $L^2(G)$ if G is a locally compact (not necessarily compact) abelian group. (author). 6 refs.

7853 (IC–91/244) **A general relativistic hydrostatic model for a galaxy.** Hojman, R. (International Centre for Theoretical Physics, Trieste (Italy)); Pena, L.; Zamorano, N. International Centre for Theoretical Physics, Trieste (Italy). Aug 1991. 35p. Order Number DE92615233. Source: OSTI; NTIS (US Sales Only); INIS.

The existence of huge amounts of mass laying at the center of some galaxies has been inferred by data gathered at different wavelengths. It seems reasonable then, to incorporate general relativity in the study of these objects. A general relativistic hydrostatic model for a galaxy is studied. We assume that the galaxy is dominated by the dark mass except at the nucleus, where the luminous matter prevails. It considers four different concentric spherically symmetric regions, properly matched and with a specific equation of state for each of them. It yields a slowly raising orbital velocity for a test particle moving in the background gravitational field of the dark matter region. In this sense we think of this model as representing a spiral galaxy. The dependence of the mass on the radius in cluster and field spiral galaxies published recently, can be used to fix the size of the inner luminous core. A vanishing pressure at the edge of the galaxy and the assumption of hydrostatic equilibrium everywhere generates a jump in the density and the orbital velocity at the shell enclosing the galaxy. This is a prediction of this model. The ratio between the size core and the shells introduced here are proportional to their densities. In this sense the model is scale invariant. It can be used to reproduce a galaxy or the central region of a galaxy. We have also compared our results with those obtained with the Newtonian isothermal sphere. The luminosity is not included in our model as an extra variable in the determination of the orbital velocity. (author). 29 refs, 10 figs.

7854 (IC–91/245) **Characterizations of locally C*-algebras.** Mohammad, N.; Somasundaram, S. International Centre for Theoretical Physics, Trieste (Italy). Aug 1991. 10p. Order Number DE92615234. Source: OSTI; NTIS (US Sales Only); INIS.

We seek the generalization of the Gelfand-Naimark theorems for locally C^*-algebras. Precisely, if A is a unital commutative locally C^*-algebra, then it is shown that A is *-isomorphic (topologically and algebraically) to $C(\Delta)$. Further, if A is any locally C^*-algebra, then it is realized as a closed *-subalgebra of some L(H) up to a topological algebraic *-isomorphism. Also, a brief exposition of the Gelfand-Naimark-Segal construction is given and some of its consequences are discussed. (author). 16 refs.

7855 (IC–91/267) **A generalization of F. and M. Riesz Theorem.** Somasundaram, S. International Centre for Theoretical Physics, Trieste (Italy). Aug 1991. 9p. Order Number DE92614143. Source: OSTI; NTIS (US Sales Only); INIS.

A generalization of F. and M. Riesz Theorem for almost invariant operators on Homogeneous Banach spaces of compact abelian groups has been shown to be true for almost periodic operators in the case of non-compact abelian groups. (author) 7 refs.

7856 (IC–91/270) **Liouville theorem for exponentially harmonic function on Riemannian manifolds.** Hong Minchun. International Centre for Theoretical Physics, Trieste (Italy). Sep 1991. 8p. Order Number DE92615235. Source: OSTI; NTIS (US Sales Only); INIS.

Suppose that M is a complete Riemannian manifold with nonnegative sectional curvature. We prove that any bounded exponentially harmonic function on M is a constant function. (author). 7 refs.

7857 (IC–91/285) **On the unbounded behaviour for some non-autonomous systems in Banach spaces.** Djafari Rouhani, B. International Centre for Theoretical Physics, Trieste (Italy). Sep 1991. 13p. Order Number DE92614144. Source: OSTI; NTIS (US Sales Only); INIS.

By modifying our previous methods and by using the notion of integral solution introduced by Benilan, we study the asymptotic behaviour of unbounded trajectories for the quasi-autonomous dissipative system: du/dt + Au is not an element of f where X is a real Banach space, A an accretive (possibly multivalued) operator in X x X, and $f - f_\infty$ is an element of $L^p((0, +\infty);X)$ for some f_∞ is an element of X and $1 \leq p < \infty$. (author). 24 refs.

7858 (LAMP–91/7) **Propagation in non-linear media: Refractive index in non-linear media.** LAMP series report (Laser, Atomic and Molecular Physics). Faramawy, F.K. (Al-Azhar Univ., Cairo (Egypt). Faculty of Science); Abu Sitta, M.M.; Obada, A.S.F. International Centre for Theoretical Physics, Trieste (Italy). Aug 1991. 22p. Order Number DE92615237. Source: OSTI; NTIS (US Sales Only); INIS.

A general theory of the effect of the electronic coupling between molecules on the response of the system as a whole to an external electromagnetic field is presented. The role of the non-linear response function for various physical quantities and their Fourier transformation is discussed. The non-linear susceptibilities to any rank for a denaturated system of particles are calculated. Also the non-linear response function for a coupled system is computed. A non-linear susceptibility for the electric dipole is obtained. Methods of the linear theory are developed to obtain the total non-linear refractive index. (author). 17 refs.

7859 (LA-UR–91-3692) **Suppression of adjacent-channel and cochannel FM interference via extended Kalman filtering.** Bradley, J.N. Los Alamos National Lab., NM (United States). Nov 1991. 6p. Sponsored by U.S. DOE Office of Administration and Human Resource Management. DOE Contract W-7405-ENG-36. (CONF-920354–2: 1992 IEEE international conference on acoustics, speech and signal processing, San Francisco, CA (United States), 23-26 Mar 1992). Order Number DE92003784. Source: OSTI; NTIS; GPO Dep.

A method is discussed for the problem of demodulating an FM signal in the presence of an adjacent-channel or cochannel interferer. State-space descriptions of the underlying message processes and the measurement process are presented which are then incorporated in an extended Kalman filter framework. The extended filter was necessary due to the nonlinearity of the measurement equation. The results of computer simulations are presented which demonstrate the system performance for various selections of the modulation index and signal separation. The derived system is contrasted to the previous state of the art in this area which involved maximum likelihood estimation. 5 refs.

7860 (LA-UR–91-4101) **Matrix models of 2d gravity.** Ginsparg, P. Los Alamos National Lab., NM (United States). [1991]. 24p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-9107195–1: Trieste summer school, Trieste (Italy), 22-25 Jul 1991). Order Number DE92004580. Source: OSTI; NTIS; INIS; GPO Dep.

These are introductory lectures for a general audience that give an overview of the subject of matrix models and their application to random surfaces, 2d gravity, and string theory. They are intentionally 1.5 years out of date.

7861 (LA-UR–91-4165) **Properties of multiple event gamma ray bursts.** Lochner, J.C. Los Alamos National Lab., NM (United States). [1991]. 6p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-36. (CONF-9110310–1: Gamma ray burst conference, Huntsville, AL (United States), 17-18 Oct 1991). Order Number DE92004574. Source: OSTI; NTIS; GPO Dep.

We present results from a study of 37 multiple event gamma ray bursts found in the monitoring data of the PVO gamma ray burst detector. We define these bursts as those which have two or more distinct emission events separated by a return to the background intensity. Significant correlation exists between the duration of the first event and the duration of the second event, while some correlation exists between the hardness of the events and only weak correlation exists in the intensity of the events. Although the time profiles of events in a burst may be similar, as measured in the phase portrait, there is no general rule about the degree of similarity of the time profiles. Subdividing the data according to the recurrence time, we find a tendency for the strength of the correlation in the hardness to increase with decreasing separation between the events. 2 refs., 2 figs., 1 tab.

7862 (SAND–91-2150) **Polarimetric calibration of a coherent measurement radar.** Brock, B.C. Sandia National Labs., Albuquerque, NM (United States). Dec 1991. 59p. Sponsored by U.S. DOE Defense Programs. DOE Contract AC04-76DP00789. Order Number DE92004114. Source: OSTI; NTIS; GPO Dep.

The polarimetry problem (the measurement of the radar-cross-section polarization scattering matrix) is described. Two methods of calibrating a polarimetric radar are outlined. The first is a general multiple-calibration-target (MCT) method applicable to almost any radar system. The second is a simple, single-calibration-target (SCT) method applicable to systems which use a single antenna for both transmit/receive and a reciprocal RF network. The performance of the MCT method is examined through the use of Monte Carlo simulations. Finally, the SCT method is applied to measurements from the SCATTER facility, demonstrating about 40 dB isolation between polarization components in the frequency domain and in excess of 50 dB in the range domain.

7863 (UCRL-CR–108433) **Collaborative research on experimental astrophysics: Final report.** Lawrence Livermore National Lab., CA (United States). 17 Sep 1991. 2p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. Order Number DE92003970. Source: OSTI; NTIS; INIS; GPO Dep.

In association with the above subcontract, the Space Sciences Laboratory of the University of California at Berkeley (UCB) has pursued a program of experimental astrophysics research in collaboration with scientists at the Laboratory for Experimental Astrophysics of the Lawrence Livermore National Laboratory. This research program encompassed a number of disparate areas, which are: design and development of the GRATIS balloon payload; the multi-object spectrograph; investigation of the use of cryogenic detectors for non-dispersive X-ray spectroscopy; laboratory astrophysics investigations; and astronomical data analysis.

7864 (UCRL-ID–109126) **Effects of upwinding on the solution of a 1-D advection-diffusion problem.** Sahai, V. Lawrence Livermore National Lab., CA (United States). Dec 1991. 15p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. Order Number DE92004472. Source: OSTI; NTIS; GPO Dep.

A one-dimensional advection-diffusion problem whose solution is known was solved using TOPAZ2D. Two numerical upwinding techniques were used to damp out the numerical oscillations that occur. Comparisons between the exact and numerical solution were made.

7865 (UCRL-JC–109165) **The Fe L-shell spectrum in compact astrophysical x-ray sources.** Liedahl, D.A. (California Univ., Berkeley, CA (United States)); Kahn, S.M.; Goldstein, W.H.; Osterheld, A.L. Lawrence Berkeley Lab., CA (United States). 2 Dec 1991. 9p. Sponsored by U.S. DOE Defense Programs; National Aeronautics and Space Administration. DOE Contract W-7405-ENG-48. (CONF-910810–6: 7. international symposium on high voltage engineering (ISH-7), Dresden (Germany), 26-30 Aug 1991). Order Number DE92005245. Source: OSTI; NTIS; GPO Dep.

Compact X-ray sources derive their luminosities from the conversion of gravitational potential energy through accretion. A centrally-produced hard X-ray continuum photoionizes the surrounding accretion flow, which can produce discrete X-ray emission. To date, as applied to compact X-ray sources, a detailed diagnostic approach to the analysis of spectroscopic data has been largely ineffective, owing to the limited quality of available line spectra and the lack of appropriate models of X-ray line emission in the presence of an ionizing continuum radiation field. We are involved in an atomic modeling program to investigate the discrete spectral response to variations in ambient plasma conditions, with the aim of establishing a new set of plasma diagnostics appropriate to this physical regime. We discuss the physical mechanisms and applications of several of the diagnostics which have been discovered in the Fe L-shell spectrum, under conditions appropriate to X-ray photoionized plasmas.

The Texas A&M experimental high energy physics program continued to reach significant milestones in each of its research initiatives during the course of the past year. We are participating in two major operating experiments, CDF and MACRO. In CDF, the Texas A&M group has spearheaded the test beam program to recalibrate the Forward Hadron Calorimeter for the upcoming CDF data run, as well as contributing to the ongoing analysis work on jets and b-quarks. In MACRO, we have assisted in the development of the final version of the wave form digitizing system being implemented for the entire scintillator system. The construction of the first six supermodules of the detector has been completed and all six are currently taking data with streamer chambers while four have the completed scintillator counter system up and running. We have built and tested prototypes of a liquid-scintillator fiber calorimeter system, in which internally reflecting channels are imbedded in a lead matrix and filled with liquid scintillator. This approach combines the performance features of fiber calorimetry and the radiation hardness of liquid scintillator, and is being developed for forward calorimetry at the SSC. The microstrip chamber is a new technology for precision track chambers that offers the performance required for future hadron colliders. The theoretical high energy physics program has continued to develop during the past funding cycle. We have continued the study of their very successful string-derived model that unifies all known interactions; flipped SU(5), which is the leading candidate for a TOE. Work has continued on some generalizations of the symmetries of string theory, known as W algebras. These are expected to have applications in two-dimensional conformal field theory, two-dimensional extensions of gravity and topological gravity and W-string theory.

7868 (GSI–90-02) **The 1990 GSI research and development programme (including programme budgeting).** Ahrens, H. (comp.). Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany). 1990. 69p. (In German). Order Number DE92750132. Source: OSTI; NTIS (US Sales Only); INIS.

The annual report surveys the research programs and activities in the field of nuclear and atomic heavy ion research, performed with the UNILAC, SIS and ESR devices, with positron spectroscopy and research on quasimolecular X-ray spectra currently being the points of main interest. Theoretical research work studied relativistic transport theories and particle production in high Coulomb fields. Research work with heavy ions in other scientific research fields was devoted to plasma physics, materials research, and biophysics, and to new technologies and manufacturing methods for targets and detectors. (DG).

7869 (SSCL-SR–1181) **HEPLIB '91: International users meeting on the support and environments of high energy physics computing.** Johnstad, H. Superconducting Super Collider Lab., Dallas, TX (United States). [1991]. 498p. Sponsored by U.S. DOE Energy Research. DOE Contract AC35-89ER40486. (CONF-9109320–: HEPLIB '91 international users meeting on the support and environments of high energy physics computing, Dallas, TX (United States), 19-20 Sep 1991). Order Number DE92004300. Source: OSTI; NTIS; INIS; GPO Dep.

The purpose of this meeting is to discuss the current and future HEP computing support and environments from the perspective of new horizons in accelerator, physics, and computing technologies. Topics of interest to the Meeting include (but are limited to): the forming of the HEPLIB world user group for High Energy Physic computing; mandate, desirables, coordination, organization, funding; user experience, international collaboration; the roles of national labs, universities, and industry; range of software, Monte Carlo, mathematics, physics, interactive analysis, text processors, editors, graphics, data base systems, code management tools; program libraries, frequency of updates, distribution; distributed and interactive computing, data base systems, user interface, UNIX operating systems, networking, compilers, Xlib, X-Graphics; documentation, updates, availability, distribution; code management in large collaborations, keeping track of program versions; and quality assurance, testing, conventions, standards.

7870 (BONN-HE–91-16) **Characters and representations of new fermionic W-algebras.** Varnhagen, R. Bonn Univ. (Germany). Physikalisches Inst. Aug 1991. 9p. Order Number DE92758920. Source: OSTI; NTIS (US Sales Only); INIS.

W-algebras are extensions of the Virasoro algebra describing chiral subalgebras of conformal quantum field theories. Careful analysis of the four-point functions and consideration of the invariant spaces under a subgroup of the modular group $SL(2,_{Z})$ allow one to find all representations of new classes of fermionic W-algebras constructed recently. For each of these W-algebras there exists only a finite number of representations. The corresponding fusion rules are calculated. (orig.).

7871 (BONN-IR–91-44) **The thermal perturbation of the Z_5 quantum chain with Fateev-Zamolodchikov symmetry.** Kaldenbach, L. Bonn Univ. (Germany). Physikalisches Inst.; Bonn Univ. (Germany). Mathematisch-Naturwissenschaftliche Fakultaet. Jul 1991. 76p. (In German). Order Number DE92758915. Source: OSTI; NTIS (US Sales Only); INIS.

We calculate numerically the lowest levels in the spectrum of the Z_5 Fateev-Zamolodchikov quantum chain perturbed by a thermal operator. We find that the ground state energy of the quantum chain is consistent with the result of the thermodynamic Bethe-Ansatz calculations. The finite-size corrections to the one-particle energies are compared with results obtained by Klassen and Melzer. At least for states with two equal particles the scattering phase shift calculated by Luescher's method reproduces the minimal solution for the S-matrix given by Koeberle and Swieca. For two-particle states with different particles this method does not work. In a second part of the work we investigate the level statistics of a Z_3-invariant quantum chain. For some of the integrable points recently proposed by de Vega and Lopes we find Poisson statistics. The other ones display level repulsion. (orig.).

7872 (DESY–91-088) **The average action for scalar fields near phase transitions.** Wetterich, C. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). Aug 1991. 82p. Order Number DE92758963. Source: OSTI; NTIS (US Sales Only); INIS.

We compute the average action for fields in two, three and four dimensions, including the effects of wave function renormalization. A study of the one loop evolution equations for the scale dependence of the average action gives a unified picture of the qualitatively different behaviour in various dimensions for discrete as well as abelian and nonabelian continuous symmetry. The different phases and the phase transitions can be infered from the evolution equation. (orig.).

7873 (DESY–91-113) **On the general theory of quantized fields.** Fredenhagen, K. (Hamburg Univ. (Germany). 2. Inst. fuer Theoretische Physik). Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). Oct 1991. 20p. (CONF-9107201–: 10. IAMP congress on mathematical physics, Leipzig (Germany), 30 Jul - 9 aug 1991). Order Number DE92759312. Source: OSTI; NTIS (US Sales Only); INIS.

In my lecture I describe the present stage of the general theory of quantized fields on the example of 5 subjects. They are ordered in the direction from large to small distances. The first one is the by now classical problem of the structure of superselection sectors. It involves the behavior of the theory at spacelike infinity and is directly connected with particle statistics and internal symmetries. It has become popular in recent years by the discovery of a lot of nontrivial models in 2d conformal-field theory, by connections to integrable models and critical behavior in statistical mechanics and by the relations to the Jones' theory of subfactors in von Neumann algebras and to the corresponding geometrical objects (braids, knots, 3d manifolds, ...). At large timelike distances the by far most important feature of quantum field theory is the particle structure. This will be the second subject of my lecture. It follows the technically most involved part which is concerned with the behavior at finite distances. Two aspets, nuclearity which emphasizes the finite density of states in phase space, and the modular structure which relies on the infinite number of degrees of freedom present even locally, and their mutual relations will be treated. The next point, involving the structure at infinitesimal distances, is the connection between the Haag-Kastler framework of algebras of local and the framework of Wightman fields. Finally, problems in approaches to quantum gravity will be discussed, as far as they are accessible by the methods of the general theory of quantized fields. (orig.).

This report discusses string physics and bosonic technicolor. (LSP).

7875 (DOE/ER/40153–8) **Research in particle theory: Annual progress report, December 1, 1990–October 10, 1991.** Mansouri, F.; Suranyi, P; Wijewardhana, L.C.R. Cincinnati Univ., OH (United States). Oct 1991. 16p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-84ER40153. Order Number DE92004070. Source: OSTI; NTIS; INIS; GPO Dep.

In the test particle approximation, the scattering amplitude for two-particle scattering in (2+1)-dimensional Chern-Simons-Witten gravity and supergravity was computed and compared to the corresponding metric solutions. The formalism was then extended to the exact gauge theoretic treatment of the two-particle scattering problem and compared to 't Hooft's results from the metric approach. We have studied dynamical symmetry breaking in 2+1 dimensional field theories. We have analyzed strong Extended Technicolor (ETC) models where the ETC coupling is close to a critical value. There are effective scalar fields in each of the theories. We have worked our how such scalar particles can be produced and how they decay. The ϕ^4 field theory was investigated in the Schrodinger representation. The critical behavior was extracted in an arbitrary number of dimensions in second order of a systematic truncation approximation. The correlation exponent agrees with known values within a few percent.

7876 (IC–91/114) **Mended chiral symmetry and the linear sigma model in one-loop order.** Scadron, M.D. International Centre for Theoretical Physics, Trieste (Italy). Jun 1991. 11p. Order Number DE92609741. Source: OSTI; NTIS (US Sales Only); INIS.

It is shown that the linear σ model in one-loop order in the chiral limit recovers meson masses $m_\pi = 0$, $m_\sigma = 2m_{qk}$ (NJL), $m_\rho = \sqrt{2}\, g_\rho f_\pi$ (KSRF), along with couplings $g_{\sigma\pi\pi} = m^2{}_\sigma/2f_\pi, g_{\rho\pi\pi} = g_\rho$ (VMD universality) and Weinberg's mended chiral symmetry decay width relation $\Gamma_\sigma = (9/2)\Gamma_\rho$. (author). 15 refs, 5 figs.

7877 (IC–91/124) **Higher genus string corrections to gauge couplings.** Antoniadis, I. (Ecole Polytechnique, 91 - Palaiseau (France). Centre de Physique Theorique); Taylor, T.R.; Narain, K.S. International Centre for Theoretical Physics, Trieste (Italy). Jun 1991. 20p. (NUB–3025;CPTH–A050.0491.). Order Number DE92609090. Source: OSTI; NTIS (US Sales Only); INIS.

Dependence of the gauge couplings on the moduli of the compactified space is studied for orbifold compactifications of the heterotic superstring. It is shown that such dependence is possible only for theories with sectors preserving N = 2 spacetime supersymmetry, and it satisfies a non-renormalization theorem. Namely, it is given entirely at the one-loop level and is determined by the violation of the integrability of 0-angle with respect to the moduli. (author). 23 refs.

7878 (IC–91/147) **Reduction of the dirac equation and relation with the Ivanenko-Landau-Kaehler equation.** Obukhov, Yu.N. (Moscow State Univ., Moscow (USSR). Dept. of Theoretical Physics); Solodukhin, S.N. International Centre for Theoretical Physics, Trieste (Italy). Jul 1991. 29p. Order Number DE92609094. Source: OSTI; NTIS (US Sales Only); INIS.

We consider the spinor theory within the framework of the inhomogeneous differential forms formalism. We also consider the possibility of describing fermions with the help of the Ivanenko-Landau-Kaehler equation. The relations between these two equations are studied. (author). 29 refs.

7879 (IC–91/157) **Analytic formulae for the neutralino masses and the neutralino mixing matrix.** El Kheishen, M.M. (Cairo Univ. (Egypt). Dept. of Physics); Aboshousha, A.A.; Shafik, A.A. International Centre for Theoretical Physics, Trieste (Italy). Jun 1991. 15p. Order Number DE92609771. Source: OSTI; NTIS (US Sales Only); INIS.

The exact formulae for the neutralino mixing matrix and their masses are derived. These formulae have been proven to be correct through comparison with the numerical solution of the system of equations containing the masses and the matrix elements, as well as approximated formulae previously published. (author). 10 refs, 6 figs.

7880 (IC–91/204) **Self-dual spin-3 and 4 theories.** Aragone, C. (Simon Bolivar Univ., Caracas (Venezuela). Dept. de Fisica); Khoudeir, A. International Centre for Theoretical Physics, Trieste (Italy). Aug 1991. 15p. Order Number DE92614147. Source: OSTI; NTIS (US Sales Only); INIS.

We present self-dual pure spin-3 and 4 actions using the physical relevant Dreibein fields. Since these actions start with a Chern-Simons like kinetic term (and therefore cannot be obtained through dimensional reduction) one might wonder whether they need the presence of auxiliary, ghost-killing fields. It turns out that they must contain, also in this three dimensional case, auxiliary fields. Auxiliary scalars do not break self-duality; their free action does not contain kinetic terms. (author). 12 refs.

7881 (IC–91/238) **Classical gravity coupled to Liouville theory.** Mazzitelli, F.D.; Mohammedi, N. International Centre for Theoretical Physics, Trieste (Italy). Aug 1991. 22p. Order Number DE92615238. Source: OSTI; NTIS (US Sales Only); INIS.

We consider the two dimensional Jackiw-Teitelboim model of gravity. We first couple the model to the Liouville action and c scalar fields and show, treating the combined system as a non linear sigma model, that the resulting theory can be interpreted as a critical string moving in a target space of dimension D=c+2. We then analyze the model from a perturbative point of view. We show in particular that the results of conformal field theory are exactly reproduced at the one-loop level. We also show that the theory is one loop finite if the cosmological constant Λ is equal to zero. When Λ is different from zero the one loop divergences are gauge-fixing dependent even on-shell. However, the theory can be renormalized as a non linear sigma model if a kinetic term is included for the auxiliary field. (author). 27 refs.

7882 (IC–91/243) **Some particular solutions of the N-body problem on the line, obtained from supersymmetry.** Gonzalez, A. (International Centre for Theoretical Physics, Trieste (Italy)); Gonzalez, R. International Centre for Theoretical Physics, Trieste (Italy). Aug 1991. 7p. Order Number DE92615258. Source: OSTI; NTIS (US Sales Only); INIS.

Supersymmetry is used in order to construct a class of N-body bosonic Hamiltonians in one spatial dimension, for which the ground state energy and wave function can be explicitly written. The corresponding interaction among particles is described by N-body, nonsingular potentials. (author). 7 refs.

7883 (IC–91/261) **Rotational-isotopic symmetries.** Santilli, R.M. International Centre for Theoretical Physics, Trieste (Italy). Sep 1991. 16p. Order Number DE92615259. Source: OSTI; NTIS (US Sales Only); INIS.

In this note we submit a nonlocal (integral) generalization of the rotational-isotopic symmetries O-circumflex(3) introduced in preceding works for nonlinear and nonhamiltonian systems in local approximation. By recalling that the Lie-isotopic theory naturally admits nonlocal terms when all embedded in the isounit, while the conventional symplectic geometry is strictly local-differential, we introduce the notion of symplectic-isotopic two-forms, which are exact symplectic two-forms admitting a factorization into the Kronecker product of a canonical two-form time the isotopic element of an underlying Euclidean-isotopic space. Topological consistency is then achieved by embedding all nonlocal terms in the isounit of the iso-cotangent bundle, while keeping the local topology for the canonical part. In this way, we identify the symplectic-isotopic geometry as being the natural geometrical counterpart of the Lie-isotopic theory. The results are used for the introduction of the notion of Birkhoffian angular momentum, that is, the generalization of the conventional canonical angular momentum which is applicable to Birkhoffian systems with generally nonlinear, nonlocal and nonhamiltonian internal forces. The generators J (and the parameters θ) coincide with the conventional quantities. Nevertheless, the quantity J is defined on the underlying Euclidean-isotopic space, by therefore acquiring a generalized magnitude. The isocommutation rules and isoexponentiation of the Birkhoffian angular momentum are explicitly computed and shown to characterize the most general known nonlinear and nonlocal realization of the isorotational symmetry. The local isomorphisms between the infinitely possible isotopes O-circumflex(3) and the conventional symmetry O(3) is proved. Finally the isosymmetries O-circumflex(3) are used to characterize the conserved, total, Birkhoffian angular momentum of closed nonselfadjoint systems. (author). 4 refs.

7884 (IC–91/262) **Euclidean-isotopic symmetries.** Santilli, R.M. International Centre for Theoretical Physics, Trieste (Italy). Sep 1991. 8p. Order Number DE92615260. Source: OSTI; NTIS (US Sales Only); INIS.

In this note we introduce the largest possible nonlinear and nonlocal symmetries of the separation $(r_{ia}-r_{ib})G_{ij}(r,r',r''\ldots)(r_{ja}-r_{jb})$, ij=1,2,3, a,b=1,2,...,N, in a Euclidean-isotopic space E-circumflex(r,G,A-circumflex) with isometric G; we identify their Lie-isotopic structure E-circumflex(3), here called Euclidean-isotopic symmetries; and we show that they are all locally isomorphic to the conventional Euclidean symmetry E(3) under the condition of positive-definiteness of the isometric. (author). 1 ref.

7885 (IC–91/263) **Galilei-isotopic symmetries.** Santilli, R.M. International Centre for Theoretical Physics, Trieste (Italy). Sep 1991. 14p. Order Number DE92615261. Source: OSTI; NTIS (US Sales Only); INIS.

We construct the most general known classical, nonlinear and nonlocal generalization of the conventional Galilei transformations, as well as the corresponding classical realization of the infinite family of Galilei-isotopic symmetries G-circumflex (3.1) proposed in preceding works, under the condition that they result to be all locally isomorphic to the conventional Galilei symmetry. The symmetries G-circumflex (3.1) are then used to characterize the largest possible class of nonlinear, nonlocal and nonhamiltonian Newtonian systems which still verify the conservation laws of all ten, total, physical quantities, as preparatory grounds for subsequent operator studies for the hadronic structure. The method for the explicit construction of the space-time isosymmetries G-circumflex (3.1) from given Galilei-noninvariant equations of motion is outlined. (author). 11 refs.

7886 (JINR-E–2-90-309) **Relativistic nucleon.** Belyakov, V.A.; Strel'tsov, V.N. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy. 1990. 7p. Order Number DE92609098. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Z. Phys., C.

It is noted that the pion and vector meson fields of the relativistic nucleon behave in different ways. The contribution of the vector meson field increases with increasing energy and becomes dominating at γ>or approx. 10^2(γ is the Lorentz factor). This leads to the growth of the transverse size for the nucleon. As a result, the character of peripheral and central collision changes (the former is determined by vector exchange). The cross section of ρ and ω production increases. A significant contribution to the spin effect is expected. The opinion is expressed that the indicated growth of the transverse size of the nucleon leads to increasing the total cross section of nucleon interaction at high energy. 9 refs.; 3 figs.; 1 tab.

7887 (JINR-E–2-90-354) **Relativistic bound states in QCD.** Kalinovskij, Yu.L. (Gomel'skij Politekhnicheskij Inst., Gomel (Byelorussian SSR)); Kallies, W.; Kaschluhn, L.; Muenchow, L.; Pervushin, V.N.; Sarikov, N.A. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. 1990. 19p. Order Number DE92609099. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Few-Body Systems.

This paper is devoted to the construction of the nonlocal theory of hadrons as bound states of quarks and gluons. The starting point of our investigation is relativistic covariant definition of instantaneous bound states and the supposition of the dominance of an instantaneous gluon interaction. The description of the nonlocal relativistic pion to the case of many-quark and many-gluon configurations using an operator approach is generalized. 31 refs.

7888 (JINR-E–2-90-364) **Generalized field quantization and the Pauli principle.** Govorkov, A.B. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. 1990. 25p. Order Number DE92609100. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to the Fifth Intern. Conf. on Hadronic Mechanics and Nonpotential Interactions, 13-17 Aug, 1990, USA.

The work is an attempt to prove that the generalized Pauli principle (i.e. Fermi statistics) for the half-integer spin fields and the Bose statistics for the integer spin fields with allowance for the existence of internal gauge symmetries are consequences of more general assumptions of the local quantum field theory. 32 refs.; 1 tab.

7889 (JINR-E–2-90-383) **On generation mechanisms of spin effects in QCD at large distances.** Goloskokov, S.V. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. 1990. 9p. Order Number DE92609101. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to the Intern. Seminar 'QUARKS-90', May 14-19 1990, Tbilisi, USSR.

The discussion of the different physical mechanisms with lead to the spin-flip amplitude growing as s at high energies and fixed momenta transfer is done. 14 refs.; 3 figs.

7890 (JINR-E–2-90-402) **Path integral for the Yang-Mills theory in a nonperturbative region.** Shabanov, S.V. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. 1990. 16p. Order Number DE92609102. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Phys. Lett., B.

The choice of physical variables in gauge theories is discussed. It is shown that the quantum description is independent of the choice of physical degrees of freedom if physical variables are considered curvilinear in the path integral approach. Then, the conventional path integral with a gauge condition is modified. The found path integral is used for the quantum descritpion of the Yang-Mills fields with an ambiguous gauge (Gribov's problem). 19 refs.

7891 (JINR-R–2-90-104) **Superstring Z' boson at the $c\tau$ factory.** Bednyakov, V.A. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems. 1990. 10p. (In Russian). Order Number DE92609714. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Yad. Fiz.

The measurements of the electroweak asymmetries with accuracy 1-5 per cent have opened the opportunity to get new restrictions on superstring Z'-boson parameters, to obtain $\sin^2\Theta_W$ in the low-energy region with good precision and to determine the weak neutral τ-lepton current in e^+e^--collisions at $\sqrt{s}$=3-5 GeV ($c\tau$-factory). 11 refs.; 2 figs.; 1 tab.

7892 (JINR-R–4-90-404) **Divergent potentials in multipole quantum electrodynamics.** Shirokov, M.I. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. 1990. 14p. (In Russian). Order Number DE92609103. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to J. Phys., A.

The multiple form of quantum electrodynamics containing the interaction eq-vectorxE-vector is discussed. Its hamiltonian has a divergent operator term. The available treatment of the trouble seems unsatisfactory. A potential-like nature of the term is ascertained using a regularization. A generalization of the multipole form is suggested in which the term divergency is reduced. It is shown that the obtained interaction with photons is still equal to eq-vectorxE-vector in the dipole approximation, and interatomic Coulomb interactions are absent. 11 refs.

This issue is the collection of the papers presented at the title meeting. The 24 of the presented papers are indexed individually. (J.P.N.).

7894 (LBL–31325) **Superspace WZW models and black holes.** Rocek, M. (Institute for Advanced Study, Princeton, NJ (United States). School of Natural Sciences); Ahn, C.; Schoutens, K.; Sevrin, A. Lawrence Berkeley Lab., CA (United States). Oct 1991. 12p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00098. (IASSNS-HEP–91/69;ITP-SB–91-49;UCB-PTH–91/50;CONF-9108185–1: Workshop on superstrings and related topics, Trieste (Italy), Aug 1991). Order Number DE92004169. Source: OSTI; NTIS; INIS; GPO Dep.

We show how to write an off-shell action for the SU(2) x U(1) supersymmetric WZW model in terms of N = 2 chiral and twisted chiral multiplets. We discuss the N = 4 supersymmetry of this model and exhibit the N = 4 superconformal current algebra. Finally, we show that the off-shell formulation makes it possible to perform a duality transformation, which leads to a supersymmetric sigma model on a manifold with a black hole type singularity. 23 refs.

7895 (NIKHEF-H–91-18) **The FORM version of MINCER.** Larin, S.A. (Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H); Tkachov, F.V. Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H. 1991. 39p. Order Number DE92614148. Source: OSTI; NTIS (US Sales Only); INIS.

This work is supported in part by the Natural Sciences and Research Council of Canada and the Quebec Committee of Education, Canada.

The program MINCER for massless three-loop Feynman diagrams of the propagator type has been reprogrammed in the language of FORM. The new version is thoroughly optimized and can be run from a utility like the UNIX make, which allows one to conveniently process large numbers of diagrams. It has been used for some calculations that were previously not practical. (author). 22 refs.; 14 figs.

7896 (YITP/U–90-29) **On matrix realization of random surfaces.** Sasaki, Misao; Suzuki, Hiroshi. Kyoto Univ., Uji (Japan). Yukawa Inst. for Theoretical Physics. Dec 1990. 35p. Order Number DE92750826. Source: OSTI; NTIS (US Sales Only); INIS.

The large N one-matrix model with a potential, $V(\phi) = \phi^2/2 + g_4\phi^4/N + g_6\phi^6/N^2$ is carefully investigated using the orthogonal polynomial method. We present a numerical method to solve the recurrence relation and evaluate the recursion coefficients r_k ($k = 1,2,3,\ldots$) of the orthogonal polynomials at large N. We find that for $g_6/g_4^2 > 1/2$ there is no m = 2 solution which can be expressed as a smooth function of k/N in the limit $N \to \infty$. This means that the assumption of smoothness of r_k at $N \to \infty$ near the critical point, which was essential to derive the string susceptibility and the string equation, is broken even at the tree level of the genus expansion by adding the ϕ^6-term. We have also observed the free energy around the (expected) critical point to confirm that the system does not have the desired criticality as pure gravity. Our (discouraging) results for m = 2 are complementary to previous analyses by the saddle point method. On the other hand, for the case m = 3 ($g_6/g_4^2 = 4/5$), we find a well-behaved solution which coincides with the result by Brezin et al.. To strengthen the validity of our numerical scheme, we present in appendix a non-perturbative solution for m = 1 which obeys the so-called type-II string equation proposed by Demeterfi et al.. (author).

7897 (YITP/U–90-30) **Gauge symmetry in extended objects and the stability of compactified membranes.** Fujikawa, Kazuo; Kubo, Jisuke. Kyoto Univ., Uji (Japan). Yukawa Inst. for Theoretical Physics. Nov 1990. 27p. Order Number DE92750827. Source: OSTI; NTIS (US Sales Only); INIS.

A large number of gauge degrees of freedom inherent in relativistic extended objects often cause dynamical instability. This problem is studied by taking bosonic membranes and balls as examples. The bosonic membrane with two spatial coordinates compactified is examined in detail, and it is pointed out that the compactification produces a stabilizing potential barrier for the variables orthogonal to the compactified spaces. By gauge transforming away the variables in the compactified spaces, we suggest a possible confinement of unstable modes in compactified spaces. (author).

7898 (YITP/U–91-4) **Affine Toda Field Theory: S-matrix vs perturbation.** Braden, H.W. (Edinburgh Univ. (United Kingdom). Dept. of Mathematics); Corrigan, E.; Dorey, P.E.; Sasaki, R. Kyoto Univ., Uji (Japan). Yukawa Inst. for Theoretical Physics. Jan 1991. 16p. Order Number DE92750828. Source: OSTI; NTIS (US Sales Only); INIS.

We have given several pieces of evidence that perturbation theory manages to reproduce various salient features of the conjectured exact S-matrices of ATFT. At present, we do not see how to use perturbation theory to provide an efficient description of the quantum field theory; an alternative formulation may well be required in order to find a proper understanding of the conjectured S-matrices and other features such as the mass-renormalization and the Clebsch-Gordan property. Certainly, the knowledge from other approaches, for example, the Quantum Group approach to imaginary coupling ATFT, investigations of the Bethe-Salpeter equations for the bound states in ATFT and the algebraic Bethe ansatz method advocated for many years by Faddeev and others would be helpful in the search for such a re-formulation. (J.P.N.).

7899 (YITP/U–91-5) **Note on 3-dimensional Regge calculus.** Soda, Jiro (Hiroshima Univ. (Japan). Dept. of Physics). Kyoto Univ., Uji (Japan). Yukawa Inst. for Theoretical Physics. Jan 1991. 13p. Order Number DE92750829. Source: OSTI; NTIS (US Sales Only); INIS.

We shall study 3-dimensional Regge calculus with concentrating the role of the Bianchi identity. As a result, the number of the physical variables is determined to be 12g - 12(g > 1). The reason why Rocek and Williams derived the exact result of Deser, Jackiw and 'tHooft is clarified. (author).

7900 (YITP/U–91-06) **Gauge symmetries in extended objects.** Fujikawa, Kazuo. Kyoto Univ., Uji (Japan). Yukawa Inst. for

Theoretical Physics. Jan 1991. 14p. Order Number DE92750830. Source: OSTI; NTIS (US Sales Only); INIS.

Some general aspects of p-dimensionally extended objects (p-branes) described by the Nambu-Goto action are discussed. The physical meaning of a large number of gauge degrees of freedom inherent in the Lagrangian is examined. The potential instability of relativistic balls (p=3) and membranes (p=2) is explained, and a possible stabilizing mechanism of these objects is discussed. (author).

7901 (YITP/U-91-7) **Conformal field theoretical approach to two-dimensional quantum gravity.** Suzuki, Hiroshi (Hiroshima Univ. (Japan). Dept. of Physics). Kyoto Univ., Uji (Japan). Yukawa Inst. for Theoretical Physics. Jan 1991. 35p. Order Number DE92750831. Source: OSTI; NTIS (US Sales Only); INIS.

A conformal (or Weyl) mode of two-dimensional gravity coupled to conformally invariant matter, which is a gauge degree of freedom in the classical level, becomes dynamical through the conformal (or Weyl) anomaly. We consider the BRS quantization of the above system in the conformal gauge. As a practical approach which enables us to do explicit calculations, we reduce the BRS invariant path integral measure for the conformal mode to the naive one by including a one-loop renormalization effect. Since the two-dimensional metric is locally conformally flat, the resulting effective theory is constructed in a flat space-time. We also construct tensorial operators (BRS, ghost number current and the energy momentum tensor) in the effective theory in a flat space-time based on anomalous Ward identities, i.e., trace, BRS and ghost number anomalies. Then we show that the effective theory has desired properties by calculating the operator product expansions. For example, we see that the total central charge of the Virasoro algebra vanishes. Our result forms a basis of a conformal field theoretical approach to two-dimensional quantum gravity and it has applications to a theory of non-critical strings. (author).

7902 (BNL-46862) **Hadron spectroscopy and B physics at RHIC.** Chung, S.U.; Weygand, D.P.; Willutzki, H.J. Brookhaven National Lab., Upton, NY (United States). Nov 1991. 20p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH00016. Order Number DE92005038. Source: OSTI; NTIS; INIS; GPO Dep.

A description is given of the physics opportunities at RHIC regarding quark-gluon spectroscopy. The basic idea is to isolate with appropriate triggers the sub-processes pomeron + pomeron → hadrons and $\gamma^* + \gamma^* \rightarrow$ hadrons with the net effective mass of hadrons in the range of 1.0 to 10.0 GeV, in order to study the hadronic states composed of quarks and gluons. The double-pomeron interactions are expected to produce glueballs and hybrids preferentially, while the two-offshell-photon initial states should couple predominantly to quarkonia and multiquark states. Of particular interest is the possibility of carrying out a CP-violation study in the self-tagging B decays, $B_d^0 \rightarrow K^+\pi^-$ and $\bar{B}_d^0 \rightarrow K^-\pi^+$. 20 refs., 4 figs.

7903 (CONF-9110317-1) **Numerical implementation of the Dirac equation on hypercube multicomputers.** Wells, J.C. (Oak Ridge National Lab., TN (United States)); Umar, A.S.; Oberacker, V.E.; Bottcher; Strayer, M.R.; Wu, J.S.; Drake, J.; Flanery, F. Oak Ridge National Lab., TN (United States). [1991]. 31p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From International supercomputer users group meeting; Dallas, TX (United States); 7-9 Oct 1991. Order Number DE92005128. Source: OSTI; NTIS; INIS; GPO Dep.

Motivated by an interest in nonperturbative electromagnetic lepton-pair production in relativistic heavy-ion collisions, we discuss the numerical methods used in implementing a lattice solution of the time-dependent Dirac equation in three-dimensional Cartesian coordinates. Discretization is obtained using the lattice basis-spline collocation method, in which quantum-state vectors and coordinate-space operators are expressed in terms of basis-spline functions, and represented on a spatial lattice. All numerical procedures reduce to a series of matrix-vector operations which we perform on the Intel iPSC/860 hypercube multicomputer. We discuss solutions to the problems of limited node memory and node-to-node communication overhead inherent in using distributed-memory, multiple-instruction, multiple-data parallel computers.

7904 (DESY-91-074) **High-energy behaviour in a non-abelian gauge theory. Pt. 3. Multiple discontinuities and particle → multireggeon vertices.** Bartels, J. (Hamburg Univ. (Germany). 2. Inst. fuer Theoretische Physik). Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). Jul 1991. 66p. Order Number DE92758901. Source: OSTI; NTIS (US Sales Only); INIS.

The high energy limit (Regge limit) of a spontaneously broken SU(2) gauge theory is studied beyond the leading-lns approximation. Calculations are based upon the analytic structure of scattering amplitudes in generalized Regge limits, and the resulting amplitudes satisfy reggeon unitarity in the t-channel as well as unitarity in the s-channel. The calculations lead to a systematic construction of a reggeon field theory. (orig.).

7905 (DOE/ER/40427-30-N91) **Relativistic projection and boost of solitons.** Wilets, L. Washington Univ., Seattle, WA (United States). Dept. of Physics. [1991]. 5p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-88ER40427. (CONF-9108186-1: Relativistic aspects of nuclear physics, Rio de Janeiro (Brazil), 2-30 Aug 1991). Order Number DE92004273. Source: OSTI; NTIS; INIS; GPO Dep.

This report discusses the following topics on the relativistic projection and boost of solitons: The center of mass problem; momentum eigenstates; variation after projection; and the nucleon as a composite. (LSP).

7906 (DOE/ER/40448-4) **Theoretical aspects of electroweak and other interactions in medium energy nuclear physics: Progress report.** Mukhopadhyay, N.C. Rensselaer Polytechnic Inst., Troy, NY (United States). Dept. of Physics. 4 Dec 1991. 12p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-88ER40448. Order Number DE92004490. Source: OSTI; NTIS; INIS; GPO Dep.

In the project under review, progress has been made on the problem of dynamic symmetries exhibited by mesons as color strings. A novel property of the vibrational states of heavy mesons, that of an approximate saturation of a particular spectroscopic interval, has been found as a "fingerprint" for linear quark confinement potentials. Progress has been continued in the study of electroweak excitation of the baryon resonances, including the use of Compton scattering.

7907 (DOE/ER/40561-16) **Relativistic meson-exchange currents in the dip region.** Dekker, M.J. (Rijksuniversiteit Utrecht (Netherlands). Robert van de Graaff Lab.); Brussaard, P.J.; Tjon, J.A. Washington Univ., Seattle, WA (United States). Inst. for Nuclear Theory. [1991]. 14p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-90ER40561. Order Number DE92004369. Source: OSTI; NTIS; INIS; GPO Dep.

We show that a relativistic treatment of meson exchange currents for inclusive electron scattering off a nucleus treated as a free Fermi gas leads to a strong enhancement of the transverse response function in the dip region in the two-particle knockout channel, mainly through the intermediate δ(1232)-excitation. This suggests that the missing strength in the dip region can, at least partially, be accounted for by a relativistic treatment of the δ(1232)-excitation and its coupling to the two-nucleon system. Recoil effects are found to be sizable over the whole range of energy transfer including the quasi-elastic peak. 18 refs., 3 figs.

7908 (DOE/ER/40561-22) **Structure and dynamical nature of hot and dense QCD matter.** Hatsuda, Tetsuo. Washington Univ., Seattle, WA (United States). Inst. for Nuclear Theory. Jul 1991. 20p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-90ER40561. (CONF-9106274-5: Symposium on high energy nuclear collisions and quark gluon plasma, Kyoto (Japan), 6-8 Jun 1991). Order Number DE92004375. Source: OSTI; NTIS; INIS; GPO Dep.

Static and dynamical properties of QCD at finite temperature and density are reviewed. Non-perturbative aspects of the QCD plasma and the modification of the hadron properties associated with the chiral transition are discussed on the basis of lattice data, effective theories and QCD sum rules. Special emphasis is laid on the importance of the finite baryon density to see the effects of the restoration of chiral symmetry in experiment.

7909 (DOE/ER/40561–23) **Simulating NJL-mechanism with realistic vector-type confining Lagrangian.** Mitra, A.N. (Washington Univ., Seattle, WA (United States). Inst. for Nuclear Theory); Mitra, B. Washington Univ., Seattle, WA (United States). Inst. for Nuclear Theory. [1991]. 11p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-90ER40561. Order Number DE92004376. Source: OSTI; NTIS; INIS; GPO Dep.

The concrete possibilities for a realistic simulation of the Nambu-Jona Lasino mechanism of dynamical mass generation are examined from the view-point of a Vector-type confining form of 4-fermion Lagrangian with a natural mass scale which substitutes for the canonical NJL-model of contact interaction, and is designed to keep a conscious link with spectroscopy. Such Lagrangians are known to lead (through the minimality condition on the effective Action) to both the Schwinger-Dyson and Bethe-Salpeter equations for the quark-mass operation $\Sigma(\rho)$ and the hadron-quark vertex function $F_H(q,P)$ respectively. With a choice of the interactions which corresponds to a Lorentz-covariant generalization of the familiar instantaneous approximation, the related Bethe-Salpeter equation already provides a good description of both $q\bar{q}$ and qqq spectra, as well a Lorentz covariant access to different types of transition amplitudes via quark loops, within a common dynamical framework. With this pre-calabration, the model is subjected to the interlinked SDE and BSE for testing some key aspects of the NJL-self consistency mechanism by evaluating some basic constants. The results are: m_{NJL} = 300 Mev, $M_\pi^2 \sim m_c$; M_σ = 857 Mev; $[q\bar{q}]_0$ = (219 mev)^3. From these values two independent estimates of m_c are found as 21.8 and 17.8 (Mev).

7910 (DOE/ER/40561–25) **Perturbative QCD signatures of hybrid hadrons in electroproduction at high Q^2.** Carlson, C.E. (Washington Univ., Seattle, WA (United States). Inst. for Nuclear Theory); Mukhopadhyay, N.C. Washington Univ., Seattle, WA (United States). Inst. for Nuclear Theory. Aug 1991. 12p. Sponsored by U.S. DOE Energy Research; National Science Foundation. DOE Contract FG06-90ER40561. Grant PHY-9112173. (WM–91-109;RPI–N76-91). Order Number DE92004378. Source: OSTI; NTIS; INIS; GPO Dep.

In the perturbative domain of quantum chromodynamics (QCD), transverse electroproduction of hybrid baryons is small. Their longitudinal electroproduction has size and scaling behavior like normal baryons. Thus deep inelastic scattering has hybrid resonance peak to background ratio small for the transverse structure function but normal size and constant for the longitudinal one. This signature can test if the Roper resonance is a hybrid. Related high momentum transfer signatures may clarify the structure of possible non-standard states such as $\Lambda(1405)$, $f_0(975)$, or $a_0(980)$.

7911 (DOE/ER/40561–26) **Nucleon-antinucleon annihilation in chiral soliton model.** Musakhanov, M.M. (Washington Univ., Seattle, WA (United States). Inst. for Nuclear Theory); Musatov, I.V. Washington Univ., Seattle, WA (United States). Inst. for Nuclear Theory. 7 Sep 1991. 11p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-90ER40561. Order Number DE92004379. Source: OSTI; NTIS; INIS; GPO Dep.

We investigate annihilation process of nucleons in the chiral soliton model by the path integral method. A soliton-antisoliton pair is shown to decay into mesons at range of about 1fm, defined by the $S\bar{S}$ potential. Contribution of the annihilation channel to the elastic scattering is discussed.

7912 (DOE/ER/40561–28) **Chiral perturbation theory with nucleons.** Meissner, U.G. Bern Univ. (Switzerland). Inst. fuer Theoretische Physik; Washington Univ., Seattle, WA (United States). Inst. for Nuclear Theory. Sep 1991. 40p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-90ER40561. Order Number DE92004383. Source: OSTI; NTIS; INIS; GPO Dep.

I review the constraints posed on the interactions of pions, nucleons and photons by the spontaneously broken chiral symmetry of QCD. The framework to perform these calculations, chiral perturbation theory, is briefly discussed in the meson sector. The method is a simultaneous expansion of the Greens functions in powers of external moments and quark masses around the massless case, the chiral limit. To perform this expansion, use is made of a phenomenological Lagrangian which encodes the Ward-identities and pertinent symmetries of QCD. The concept of chiral power counting is introduced. The main part of the lectures of consists in describing how to include baryons (nucleons) and how the chiral structure is modified by the fact that the nucleon mass in the chiral limit does not vanish. Particular emphasis is put on working out applications to show the strengths and limitations of the methods. Some processes which are discussed are threshold photopion production, low-energy compton scattering off nucleons, πN scattering and the σ-term. The implications of the broken chiral symmetry on the nuclear forces are briefly described. An alternative approach, in which the baryons are treated as very heavy fields, is touched upon.

7913 (DOE/ER/40561–31) **Segregation of quarks within the neutron.** Dziembowski, Z. Washington Univ., Seattle, WA (United States). Inst. for Nuclear Theory. [1991]. 14p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-90ER40561. Order Number DE92004386. Source: OSTI; NTIS; INIS; GPO Dep.

Measurements of the nucleon form factor and structure function seem to indicate an inhomogeneous distribution of flavor, charge and spin within the nucleon. It is argued that the ordinary three-quark model with a spin-spin force of the type suggested by QCD can explain the inhomogeneity as seen at different resolutions. This agreement suggests a specific bound quark picture of the nucleon structure with a positive core of u and d quarks in a spin-O state of ms radius 0.17 ± 0.01 fm^2 and an outer layer of a linear size ~ 1 fm where the polarized u (in the proton) or d (in the neutron) is orbiting. 21 refs., 3 figs.

7914 (DOE/ER/40561–32) **Soft modes associated with chiral transition in hot QCD.** Hatsuda, Tetsuo. Washington Univ., Seattle, WA (United States). Inst. for Nuclear Theory. Oct 1991. 11p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-90ER40561. (CONF-910898–1: Hot summer daze: quantum chromodynamics at finite temperature and density, Upton, NY (United States), 6-17 Aug 1991). Order Number DE92004387. Source: OSTI; NTIS; INIS; GPO Dep.

Fluctuations of the chiral order parameter in a hot and/or dense QCD plasma is discussed. If the transition is of second order or weak first order, the fluctuation gets large strength with small width and behaves as a bosonic quasi-particle in the plasma. This was first pointed out by Kunihiro and the present author on 1985 and was called "soft mode". General properties of the soft mode and its relation to the recent measurement of the hadronic screening length on the lattice are discussed in this report.

7915 (DOE/ER/40561–33) **Chiral symmetry, axial anomaly and the structure of hot QCD.** Hatsuda, Tetsuo. Washington Univ., Seattle, WA (United States). Inst. for Nuclear Theory. Oct 1991. 48p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-90ER40561. Order Number DE92004389. Source: OSTI; NTIS; INIS; GPO Dep.

Lecture given at "Winter meeting on intermediate energy nuclear physics" (Mt. Sorak, Korea, February 26–March 1, 1991).

This lecture is composed of three parts. [I] Heavy quark and gluon contents of light hadrons, [II] anomalous gluon content of the nucleon, and [III] hot and dense QCD. Non-valence structures of nucleon due to the OZI violation are extensively discussed in [I] and [II], and non-perturbative aspects of the quark-gluon plasma are reviewed in [III]. 41 refs.

7916 (DOE/ER/40614–10) **QCD based static potential between heavy quarks.** Baker, M. (Washington Univ., Seattle, WA (United States). Dept. of Physics); Ball, J.S.; Zachriasen, R. Washington Univ., Seattle, WA (United States). Dept. of Physics. [1991]. 4p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-91ER40614. (CALT–68-1744;CONF-910881–28: Particles and fields '91, Vancouver (Canada), 18-22 Aug 1991). Order Number DE92004266. Source: OSTI; NTIS; INIS; GPO Dep.

We calculate the static potential between a quark-anti quark pair using dual potentials to describe long-distance Yang-Mills theory.

7917 (FNAL/C–91/281) **Physics requirements for LHC/SSC calorimetry.** Green, D. Fermi National Accelerator Lab., Batavia, IL (United States). Oct 1991. 33p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH03000. (CONF-9110281–1: Calorimetry and high energy physics conference, Capri (Italy), 14-18 Oct 1991). Order Number DE92003054. Source: OSTI; NTIS; INIS; GPO Dep.

The goal of the next generation of collider detectors is to study the origin of electroweak symmetry breaking. The mass scale for this study is roughly 1 TeV. No matter what the details of the mechanism, one can be confident that new phenomena will occur, since weak interactions become strong, i.e., violate partial wave unitarity, at that mass scale. The partial wave amplitude for ee→ WW scattering is; $ao \sim 4\phi/\alpha_w(M_w/M)^2$, $ao \sim 1$ if $M \sim 1$ TeV. Therefore, the detectors for LHC/SSC must be able to confront this mass scale. In particular, the electroweak dynamics is such that the study of gauge boson pairs has a high priority. Given that the simplest decay modes for gauge boson are into leptons, the new detectors will naturally tend to optimize performance for leptons.

7918 (IC–91/152) **QCD analysis of deep inelastic lepton-nucleon scattering data.** Bilenkaya, S.I. (Joint Inst. for Nuclear Research, Dubna (USSR)); Stamenov, D.B. International Centre for Theoretical Physics, Trieste (Italy). Jun 1991. 13p. Order Number DE92609862. Source: OSTI; NTIS (US Sales Only); INIS.

A combined next-to-leading order QCD analysis of BCDMS $\mu H_2(D_2)$ and CDHS $\nu(\nu\text{-bar})H_2$ scattering data is presented. The nucleon structure functions are given in terms of parton distributions. Unlike most of the papers on this subject, the cross-section scattering data (not the values for the nucleon structure functions extracted from these data by additional extrapolations and assumptions) are fitted. A very good agreement of the data with the predictions of QCD for the parton distributions is observed. The QCD mass scale parameter Λ is determined form these data both in a flavour nonsinglet approximation and with a complete flavour singlet and non-singlet treatment. These two fits to the data give consistent results for Λ. (author). 16 refs, 2 tabs.

7919 (IC–91/268) **Thermodynamics of a deformed bag and quark-gluon deconfinement phase transition.** Ansari, A. (International Centre for Theoretical Physics, Trieste (Italy)); Mustafa, M.G. International Centre for Theoretical Physics, Trieste (Italy). Aug 1991. 22p. Order Number DE92614197. Source: OSTI; NTIS (US Sales Only); INIS.

Constructing a colour singlet partition function for a finite size deformable bag, the thermodynamic properties of quarks (two flavours) and gluons are studied with the chemical potential $\mu \neq 0$ under the constraint that the baryon number, b = 1. The transition temperature, T_S in the large volume limit as well as the critical temperature, $T_C > T_S$, beyond which hadrons cease to exist, both are found to decrease with the increase of deformation, presently a spheroidal shape being considered. The difference $T_C - T_S \approx 20$ MeV, which arises mainly due to the restriction to the colour singlet states, remains more or less deformation independent. Thus, a region of superheated (supercooled) metastable states in the temperature range $T_S < T < T_C$ in the μ - T exists even for deformed hadrons with the values of T_S and T_C somewhat reduced. (author). 28 refs, 3 figs, 1 tab.

7920 (IC–91/290) **On the Q-Q channel interaction of the effective NJL-Hamiltonian.** Ansari, A. International Centre for Theoretical Physics, Trieste (Italy). Sep 1991. 11p. Order Number DE92614198. Source: OSTI; NTIS (US Sales Only); INIS.

We take the usual simple form of the Nambu-Jona-Lasinio (NJL) Hamiltonian containing only the scalar and pseudoscalar terms with two flavours of massless quarks (u and d). Then making the interaction strength position dependent, as done by Bernard et al., to bringing confinement, we calculate the nucleon (N) and delta (Δ) masses. In this simple form the interaction seems not to contain enough spin-isospin dependence to yield a reasonable value of N - Δ mass difference. The raises doubts if the NJL interaction, in its simple form, can be employed to study the spectroscopic properties of hadrons. (author). 13 refs, 1 fig., 2 tabs.

7921 (JINR-E–2-90-196) **Extra Z' boson and top quark mass.** Bednyakov, V.A. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems. 1990. 8p. Order Number DE92609713. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Phys. Lett., B.

The inclusion of the extra Z' boson decreases the top quark mass determined from the radiative corrections. For instance, m_t can decrease from 130 GeV to 85 GeV for some permissible values of the Z' boson parameters. 11 refs.; 2 figs.; 1 tab.

7922 (JINR-E–2-90-414) **Instantaneous approximation for QCD and the properties of mesons (π,π',K,K').** Amirkhanov, I.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics); Pervushin, V.N.; Puzynin, I.V.; Zhuraev, O.M.; Sarikov, N.A. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics. 1990. 10p. Order Number DE92609747. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Modern Physics Letters.

The paper is devoted to the QCD-calculation of constituent u, d, s-quark masses, nonlocal condensate, π, π', K, K'-mesons masses, their wave functions and the decay constants in the supposition of the dominance of the instantaneous gluon interaction defined from the J/ψ-spectroscopy. The approach gives the unified description of meson spectroscopy and their radial excitations excitations for arbitrary mass and current quarks. 14 refs.; 6 figs.; 1 tab.

7923 (LBL–31274) **Electroweak phase transitions.** Anderson, G.W. Lawrence Berkeley Lab., CA (United States). 16 Sep 1991. 69p. Sponsored by U.S. DOE Energy Research; National Science Foundation. DOE Contract AC03-76SF00098. Grant PHY90-21139. (UCB-PTH–91/46). Order Number DE92004177. Source: OSTI; NTIS; INIS; GPO Dep.

An analytic treatment of the one Higgs doublet, electroweak phase transition is given. The phase transition is first order, occurs by the nucleation of thin walled bubbles and completes at a temperature where the order parameter, $\langle\phi\rangle_T$ is significantly smaller than it is when the origin becomes absolutely unstable. The rate of anomalous baryon number violation is an exponentially function of $\langle\phi\rangle_T$. In very minimal extensions of the standard model it is quite easy to increase $\langle\phi\rangle_T$ so that anomalous baryon number violation is suppressed after completion of the phase transition. Hence baryogenesis at the electroweak phase transition is tenable in minimal of the standard model. In some cases additional phase transitions are possible. For a light Higgs boson, when the top quark mass is sufficiently large, the state where the Higgs field has a vacuum expectation value $\langle\phi\rangle = 246$ GeV is not the true minimum of the Higgs potential. When this is the case, and when the top quark mass exceeds some critical value, thermal fluctuations in the early universe would have rendered the state $\langle\phi\rangle = 246$ GeV unstable. The requirement that the state $\langle\phi\rangle = 246$ GeV is sufficiently long lived constrains the masses of the Higgs boson and the top quark. Finally, we consider whether local phase transitions can be induced by heavy particles which act as seeds for deformations in the scalar field.

7924 (NIKHEF-H–91-13) **On the existence of a new constrained instanton and high-energy electroweak interactions.** Klinkhamer, F.R. (CHEAF, Amsterdam (Netherlands)). Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H. Jun 1991. 27p. Order Number DE92614181. Source: OSTI; NTIS (US Sales Only); INIS.

The authors construct, in the SU(2) Yang-Mills-Higgs theory of the electroweak interactions, a non-contractible loop of 4-dimensional configurations. Numerical results for the action over the loop show the existence of a new constrained instanton I^* with action $\approx 16\pi^2/g^2$ and zero topological charge. They also discuss the spectral flow of the Dirac operator along the loop and I^* is expected to have fermion-zero modes. As a possible application the total B+L violating cross-section is considered, evaluated semiclassically from the imaginary part of the forward elastic scattering amplitude. The numerical results for I^* indicate a threshold-like behaviour for non-perturbative effects at a parton center-of-mass energy close to the sphaleron energy $E_S \approx 10$ TeV. (author). 31 refs.; 9 figs.

7925 (NIKHEF-H–91-17) **Two-loop QCD corrections to the coefficient functions of the deep inelastic structure functions**

F_2 and F_L. Larin, S.A. (Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H); Vermaseren, J.A.M. Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H. 1991. 11p. Order Number DE92614188. Source: OSTI; NTIS (US Sales Only); INIS.

The authors present the analytic two-loop perturbative QCD corrections in the leading twist approximation to the coefficient functions of the operator product expansion for the second to tenth moments of the nonsinglet and singlet deep inelastic structure functions F_2 and F_L. (author). 22 refs.

7926 (NIKHEF-H–91-19) **The $O(\alpha_S{}^3)$ QCD correction to the lowest moment of the longitudinal structure function in deep inelastic electron-nucleon scattering.** Larin, S.A. (Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H); Tkachov, F.V. Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H. 1991. 9p. Order Number DE92614182. Source: OSTI; NTIS (US Sales Only); INIS.

The authors present the analytic leading-twist three-loop perturbative QCD correction to the moment $\int 0^1 dx F_L{}^{p-n}(x,Q^2)$ of the non-singlet longitudinal structure function F_L of the deep inelastic electron-nucleon scattering. It provides quantitative information on uncertainties of pQCD predictions for $D(x,Q^2)$ $\sigma_l/\sigma/T$. (author). 24 refs.; 2 figs.

7927 (NIKHEF-H–91-22) **Rescattering in ν/ν-bar-deuteron reactions.** Tenner, A.G. (Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H); Nikolaev, N.N. Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H. Aug 1991. 26p. Order Number DE92614183. Source: OSTI; NTIS (US Sales Only); INIS.

A study is made of the rescattering phenomenon in the deuteron by means of the analysis of ν/ν-bar-d interactions. Values are presented of the rescattering fraction in dependence on various para-meters. The charged and negative hadron multiplicities of rescatter and non-rescatter events are evaluated. A special study is made of strange particle events. Production rates of specific particles (e.g. negative, strange) are compared for rescattering and non-rescattering reactions in their dependence on rapidity. The rescattering data are analyzed in the framework of the formation time formalism. The proper time of hadronization T_f is evaluated to be ≈ 0.5 fm/c. The authors' analysis of νd scattering is directly relevant to the issue of the quark-gluon plasma formation in heavy-ion collisions. Some differences between the neutrino and hadron induced rescatters in a deuteron can be attributed to the constituent quark structure of nucleons. The observed enhancement of Λ production in the rescatter events suggests that hadronic reinteraction mechanisms may obscure strangeness enhancement as a signature of the quark-gluon plasma formation in the heavy-ion collisions. The possible reduction of formation time in low multiplicity events is discussed. (author). 40 refs.; 8 figs.; 3 tabs.

Source: OSTI; NTIS; INIS; GPO Dep.

We review the field of the elastic scattering of pp and $\bar{p}$p at the ultra-high energies. The recent total cross section, σ_{tot}, and ρ-value results from the Fermilab Tevatron Collider experiments presented at the 4th 'Blois' Workshop on Elastic and Diffractive Scattering (Elba, Italy, in May, 1991), allow us a comprehensive overview of the field. 24 refs., 10 figs., 3 tabs.

7930 (BNL–46819) **Status of the Oα calculation of $e^+e^- \rightarrow W^+W^- \rightarrow$ 4f(gamma).** Aeppli, A. Brookhaven National Lab., Upton, NY (United States). Nov 1991. 8p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH00016. (CONF-9109328–1: Physics with e^+e^- linear colliders, Hamburg (Germany), 2-4 Sep 1991). Order Number DE92005040. Source: OSTI; NTIS; INIS; GPO Dep.

We consider the full process $e^+e^- \rightarrow W^+W^- \rightarrow 4f$. We show that the off-shell effect are sizable and comparable to radiative effects. We give the exact results for hard bremsstrahlung processes $e^+e^- \rightarrow (4f + \gamma)$ and the results of the $O(\alpha)$ improved cross sections for $e^+e^- \rightarrow W^+W^-$ including photon radiation. The status of the virtual corrections to the 4f-process is described.

7931 (BNL–46890) **Lattice calculation of nonleptonic charm decays.** Simone, J.N. Brookhaven National Lab., Upton, NY (United States). Nov 1991. 201p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH00016. Order Number DE92005026. Source: OSTI; NTIS; INIS; GPO Dep.

Thesis submitted to the Univ. of California, Los Angeles.

The decays of charmed mesons into two body nonleptonic final states are investigated. Weak interaction amplitudes of interest in these decays are extracted from lattice four-point correlation functions using a effective weak Hamiltonian including effects to order G_f in the weak interactions yet containing effects to all orders in the strong interactions. The lattice calculation allows a quantitative examination of non-spectator processes in charm decays helping to elucidate the role of effects such as color coherence, final state interactions and the importance of the so called weak annihilation process. For $D \rightarrow K\pi$, we find that the non-spectator weak annihilation diagram is not small, and we interpret this as evidence for large final state interactions. Moreover, there is indications of a resonance in the isospin $\frac{1}{2}$ channel to which the weak annihilation process contributes exclusively. Findings from the lattice calculation are compared to results from the continuum vacuum saturation approximation and amplitudes are examined within the framework of the 1/N expansion. Factorization and the vacuum saturation approximation are tested for lattice amplitudes by comparing amplitudes extracted from lattice four-point functions with the same amplitude extracted from products of two-point and three-point lattice correlation functions arising out of factorization and vacuum saturation.

7932 (BONN-IR–91-57) **Measurement of the differential cross section of the reaction $\gamma p \rightarrow \pi^+ n$ at the energy-tagged photon beam of the PHOENICS experiment.** Buechler, K. Bonn Univ. (Germany). Physikalisches Inst.; Bonn Univ. (Germany). Mathematisch-Naturwissenschaftliche Fakultaet. Oct 1991. 65p. (In German). Order Number DE92759318. Source: OSTI; NTIS (US Sales Only); INIS.

At the Bonn Electron Strecherring ELSA the differential cross section for the reaction $\gamma p \rightarrow \pi^+ n$ was measured. The measurement was performed with the PHOENICS detector, which consists of a bremsstrahlung tagging system and a hadron detector with large angular acceptance. The experiment covered a kinematic region of 210 MeV $\leq E_\gamma \leq$ 960 MeV and 35deg $< \Theta_{\pi,\ \mathrm{CMS}} \leq$ 135deg. The data are in good agreement with other experiments. They are also compared with the results of a recent partial wave analysis and with the predictions of a constituent quark model in the first resonance region. (orig.).

7933 (CONF-900822–33) **Measurement of the J/Ψ elastic photoproduction from 100 GeV to 400 GeV in the experiment E687 at Fermilab.** Ratti, S.P. (Pavia Univ. (Italy). Dipt. di Fisica Nucleare e Teorica). E687 Collaboration. Northwestern Univ., Evanston, IL (United States). [1990]. 23p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76ER02289. From 25. IUPAP international conference on high energy physics; Singapore (Singapore); 2-8 Aug 1990. Order Number DE92004290. Source: OSTI; NTIS; INIS; GPO Dep.

In the present paper we give the experimental measurement of the cross section per nucleon for the elastic J/ψ photoproduction in six energy intervals from 100 GeV to 450 GeV; the overall dσ/dt differential cross section, as well as an estimate of the coherent diffractive photoproduction off the Be nucleus. We will finally compare the energy dependence of our measured cross sections with the predictions of the PGF Model.

7934 (CONF-901145–2) **Proton-proton and proton-antiproton elastic scattering at high energies: Theory, phenomenology, and experiment.** Wu, Tai Tsun. Harvard Univ., Cambridge, MA (United States). Gordon McKay Lab. [1990]. 11p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-84ER40158. From Beyond the standard model II - a critical review of the standard model and the prospects for discovering new physics; Norman, OK (United States); 1-3 Nov 1990. Order Number DE92004414. Source: OSTI; NTIS; INIS; GPO Dep.

This is a brief review of the progress in the understanding, during the past twenty years, of hadronic elastic scattering near the forward direction at high energies. On the basis of quantum gauge field theories, the Pomeron is found to be a branch cut above 1. Using the physical picture that this result implies, phenomenology for proton-proton and antiproton-proton elastic scattering is constructed. Two noteworthy features are that, at high energies, both the total cross section and the ratio of the integrated elastic cross section to the total cross section to the total cross section are increasing functions of the center-of-mass energy. Detailed predictions are given for the elastic differential cross sections, Coulomb interference and the ratios of the real to imaginary parts of the forward amplitudes. These predictions have been extensively and accurately confirmed by experiments, and have also been given both for future experiments on existing accelerators and for experiments on future accelerators. 14 refs., 2 figs.

7935 (CONF-9105106–34) **Fluctuations and correlations in 200A GeV A-A collisions.** Wilkes, R.J. EMU01 Collaboration. Washington Univ., Seattle, WA (United States). Visual Techniques Lab. [1991]. 4p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-91ER40614. (UWSEA-PUB–91-10). From Conference on the intersections between particle and nuclear physics; Tucson, AZ (United States); 23-29 May 1991. Order Number DE92004381. Source: OSTI; NTIS; INIS; GPO Dep.

Factorial cumulant moments are used to analyze pseudorapidity fluctuations in A-A interactions. Only the second cumulant moments are significantly non-zero for central event samples, which implies that the higher order scaled factorial moments for the central data provide little information in addition to that from the second moments. The slopes of the cumulant plots are found to be inversely proportional to η density for a variety of beam/target/energy combinations. We also present results on 2-D scaled factorial moments and the 2-particle correlations for central S+Au interactions.

7936 (DESY–91-078) **QCD corrections to final state photon bremsstrahlung in e^+e^- annihilation.** Kramer, G. (Hamburg Univ. (Germany). 2. Inst. fuer Theoretische Physik); Lampe, B. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). Jul 1991. 20p. Contract BMFT 055HH91P(8). Order Number DE92758900. Source: OSTI; NTIS (US Sales Only); INIS.

We calculate the partial widths of the decay Z into one photon plus n-jets (n = 1, 2, 3) as a function of the invariant mass cut parameter $y = {}^{m_{ij}2}/m_Z{}^2$ where m_{ij} is the minimum jet invariant mass. Our calculation uses fixed order QCD perturbation theory up to $O(\alpha_s)$. Results in two schemes for defining jet variables are presented. (orig.).

7937 (DESY–91-080) **Rare decays of B-mesons.** Ali, A. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). Jul 1991. 20p. (CONF-9105177–: 1. international A.D. Sakharov conference on physics, Moscow (USSR), 27-31 May 1991). Order Number DE92758903. Source: OSTI; NTIS (US Sales Only); INIS.

This paper is organized as follows. First, we discuss the decay rates for b → (s,d) + γ in the lowest order (1 loop) and including the QCD corrections in the effective Hamiltonian method. The photon energy spectrum in the inclusive decays $B \to X_s + \gamma$ is evaluated in this approach and the dominant background from the CC decays $B \to X_c + \gamma$ is presented. Next, we discuss the calculations for the inclusive decays b → s + anti l (l = e,μ,ν), including the QCD corrections. Finally, we summarize rate estimates for the exclusive rare decays of the B-meson, $B \to K^*\gamma$, and B → (K,K*) anti l (l = e,μ,ν), as well as $B^o{}_{s,d} \to \gamma\gamma$ and $B^o{}_{s,d} \to l^+l^-$ with (l = e,μ,r). (orig./HSI).

7938 (DESY–91-085) **Associate J/ψ + γ production: A clean probe of gluon densities.** Drees, M. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). Gruppe Theorie); Kim, C.S. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). Aug 1991. 21p. Order Number DE92758899. Source: OSTI; NTIS (US Sales Only); INIS.

We discuss the associate production of a J/Ψ meson and a photon at panti p (or pp) and ep colliders. By requiring the J/Ψ to decay into an e^+e^- or $\mu^+\mu^-$ pair, we end up with an exceptionally clean final state. Furthermore, in leading order it can only be produced via gluon fusion. This process can therefore serve as a very clean probe of the gluon densities inside the proton as well as the photon. Numerical results are presented for the Tevatron panti p and HERA ep colliders. (orig.).

7939 (DOE/ER/40158–9) **The theory of High Energy Collision Processes: Annual technical progress report, January 1, 1991–December 31, 1991.** Wu, T.T. Harvard Univ., Cambridge, MA (United States). Div. of Applied Sciences. 29 Nov 1991. 7p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-84ER40158. Order Number DE92004415. Source: OSTI; NTIS; INIS; GPO Dep.

This report briefly discusses research in proton-antiproton interactions and the standard model. (LSP)

7940 (DOE/ER/40389–71) **Experimental investigations in particle physics at intermediate energies: Performance report for December 1, 1990–November 30, 1991.** Auerbach, L.B.; Highland, V.L.; Martoff, C.J.; McFarlane, K.W.; Guss, C.; Kettell, S. Temple Univ., Philadelphia, PA (United States). Dept. of Physics. 30 Sep 1991. 18p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-88ER40389. Order Number DE92005081. Source: OSTI; NTIS; INIS; GPO Dep.

The major elements of this project continues to be on fundamental symmetries and parameters of the Standard Model. The projects in the current period have been BNL E791 (a search for the decay $K_L{}^0 \to \mu e$, which would violate the rule of separate lepton number conservation), test of an upgrade proposal (E871), and LSND, a neutrino experiment at LAMPF. For E791, data taking was completed in June 1990, and preliminary results are now available for the decays $K_L{}^0 \to \mu e$ and $K_L{}^0 \to \mu\mu$from the entire data set. The data for decay $K_L{}^0 \to ee$ are still being analysed. These are an upper limit for the branching fraction for $K_L{}^0 \to \mu e$ of 3.5×10^{-11} (90% C.L.). From the 1990 data alone, we have a new (preliminary) value of the branching fraction for $K_L{}^0 \to \mu\mu$ of $(6.96\pm0.\ 4\pm0.22) \times 10^{-9}$, with a sample of 349 events. Combining this with earlier data gives $(6.96\pm0.34) \times 10^9$, by far the most precise value. The limit on the decay $K_L{}^0 \to \mu e$ places a lower limit on the mass of a new particle mediating such decays of 85 TeV. The LSND (Large Scintillator Neutrino Detector), a search for neutrino oscillations at LAMPF, has been approved, and is now underway. Other neutrino work at Los Alamos, E764, has resulted in a final publication. This includes the best, measurement of ν-nuclear scattering, in ν_{mu} ^{12}C inclusive cross sections. The measurement of the cross section for the exclusive reaction $\nu^{mu\,12}C \rightarrow \mu^{-12}$ N is unique. In a new development, Dr. Martoff has established a facility for fabrication of superconducting detectors of nuclear radiation; the equipment has been funded and is partly installed. Planned uses include scattering for 'Dark Matter.' In summary, the objectives for this year have been met.

7941 (DOE/ER/40423–27) **Physics challenges in the strong interactions.** Ellis, S.D. Washington Univ., Seattle, WA (United States). Dept. of Physics. Jan 1991. 11p. Sponsored by U.S. DOE Energy Research. DOE Contract AS06-88ER40423. (CONF-9006267–36: 1990 DPF summer study on high energy physics, Snowmass, CO (United States), 25 Jun - 13 jul 1990). Order Number DE92004395. Source: OSTI; NTIS; INIS; GPO Dep.

An overview of the challenges to be faced in the area of the strong interactions during the 1990's is presented. As an illustrative example special attention is given to the analysis of jets as studied at hadron colliders.

7942 (DOE/ER/40444–4-Add.) **Studies in medium energy physics: Progress report and continuation proposal, April 1, 1991–March 31, 1992: Addendum.** Green, A.; Hoffmann, G.W.; McDonough, J.; Purcell, M.J.; Ray, R.L.; Read, D.E.; Worn, S.D. Texas Univ., Austin, TX (United States). Dept. of Physics. Dec 1991. 94p. Sponsored by U.S. DOE Energy Research. DOE Contract FG05-88ER40444. Order Number DE92006451. Source: OSTI; NTIS; INIS; GPO Dep.

This document constitutes the (1991–1992) technical progress report and continuation proposal for the ongoing medium energy nuclear physics research program supported by the US Department of Energy through special Research Grant DE-FG05-88ER40444. The experiments discussed are conducted at the Los Alamos National Laboratory's (LANL) Clinton P. Anderson Meson Physics Facility (LAMPF) and the Alternating Gradient Synchrotron (AGS) facility of the Brookhaven National Laboratory (BNL). The overall motivation for the work discussed in this document is driven by three main objectives: (1) provide hadron-nucleon and hadron-nucleus scattering data which serve to facilitate the study of effective two-body interactions, test (and possibly determine) nuclear structure, and help study reaction mechanisms and dynamics; (2) provide unique, first-of-a-kind "exploratory" hadron-nucleus scattering data in the hope that such data will lead to discovery of new phenomena and new physics; and (3) perform precision tests of fundamental interactions, such as rare decay searches, whose observation would imply fundamental new physics.

7943 (DOE/ER/40614–2) **On defining the un-definable: JETS.** Ellis, S.D. Washington Univ., Seattle, WA (United States). Dept. of Physics. [1990]. 7p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-91ER40614. (CONF-9012124–1: Workshop on jet studies at LEP and HERA, Durham (United Kingdom), 8 Dec 1990). Order Number DE92004269. Source: OSTI; NTIS; INIS; GPO Dep.

A brief summary is presented of the current status of jet studies in hadron-hadron collisions. The primary focus is on those issues that would benefit from comparisons of jet samples obtained from hadron-hadron collisions, from e^+e^- annihilation events at LEP and from deep inelastic collisions at HERA. The important point is that, to perform this comparison properly, the jet various samples must be obtained using the same jet definition.

7944 (DOE/ER/40614–8) **Particle physics—Experimental: Annual progress report.** Lord, J.J.; Boynton, P.E.; Burnett, T.H.; Wilkes, R.J. Washington Univ., Seattle, WA (United States). Dept. of Physics. 21 Aug 1991. 52p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-91ER40614. Order Number DE92004253. Source: OSTI; NTIS; INIS; GPO Dep.

We are continuing a research program in particle astrophysics and high energy experimental particle physics. We have joined the DUMAND Collaboration, which is constructing a deep undersea astrophysical neutrino detector near Hawaii. Studies of high energy hadronic interactions using emulsion chamber techniques were also continued, using balloon flight exposures to ultra-high cosmic ray nuclei (JACEE) and accelerator beams. As members of the DUMAND Collaboration, we have responsibility for development a construction of critical components for the deep undersea neutrino detector facility. We have designed and developed the acoustical positioning system required to permit reconstruction of muon tracks with sufficient precision to meet the astrophysical goals of the experiment. In addition, we are making significant contributions to the design of the database and triggering system to be used. Work has been continuing in other aspects of the study of multiparticle production processes in nuclei. We are participants in a joint US/Japan program to study nuclear interactions at energies two orders of magnitude greater than those of existing accelerators, using balloon-borne emulsion chambers. On one of the flights we found two nuclear interactions of multiplicity over 1000 – one with a multiplicity of over 2000 and pseudorapidity density $\sim$ 800 in the central region. At the statistical level of the JACEE experiment, the frequency of occurrence of such events is orders of magnitude too large. We have continued our ongoing program to study hadronic interactions in emulsions exposed to high energy accelerator beams.

7945 (FNAL/C–91/287-E) **Direct production of high p_t leptons and search for additional heavy bosons at 1.8 TeV.** Gold, M. (Lawrence Berkeley Lab., CA (United States)). Fermi National Accelerator Lab., Batavia, IL (United States). Oct 1991. 8p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH03000. (CONF-9107172–8: 15. joint international lepton photon symposium at high energies and European Physical Society (EPS) conference on high energy, Geneva (Switzerland), 25 Jul - 1 aug 1991). Order Number DE92004117. Source: OSTI; NTIS; INIS; GPO Dep.

We have studied the production of high p_t electrons and muons and searched for additional heavy charged (W′) and neutral (Z′) vector bosons. We find no evidence for such bosons and set limits of $M_w' > 520$ GeV and $M_Z' > 412$ GeV (95% confidence level) assuming Standard Model couplings. The production of high mass electron and muon pairs is consistent with the Standard Model prediction for the Drell-Yan production mechanism. Lower limits of 2.2 TeV and 1.6 TeV (95% confidence level) are set on electron-quark and muon-quark compositeness scale parameters Λ_{LL}^- associated with an effective contact interaction.

7946 (FNAL/C–91/328) **Recent heavy flavor physics results from fixed target experiments.** Spiegel, L. Fermi National Accelerator Lab., Batavia, IL (United States). Nov 1991. 11p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH03000. (CONF-9106289–4: 3. topical seminar on heavy flavors, S. Miniato (Italy), Jun 1991). Order Number DE92005110. Source: OSTI; NTIS; INIS; GPO Dep.

Recent results from fixed target experiments in the field of heavy quark flavors, as published or otherwise disseminated in the last year, are reviewed. Emphasis is placed on distilling the main conclusions from these results. 35 refs., 5 figs., 4 tabs.

7947 (IC–91/102) **Odderon - A sharp signal at HERA.** Barahovsky, V.V. (Irkutsk Univ., Irkutsk (USSR). Physics Dept.); Shelkovenko, A.N.; Zhitnitsky, I.R. International Centre for Theoretical Physics, Trieste (Italy). May 1991. 9p. Order Number DE92609732. Source: OSTI; NTIS (US Sales Only); INIS.

The soon commissioning of the HERA provides for the first time an opportunity to study physics of odderon without any background in the process $ep \rightarrow e0^-p$. 10 refs, 3 figs.

7948 (IC–91/128) **Probing the flavour assymetric nucleon sea with week currents.** Kamran, M. International Centre for Theoretical Physics, Trieste (Italy). Jun 1991. 6p. Order Number DE92609742. Source: OSTI; NTIS (US Sales Only); INIS.

NMC has recently shown that the proton contains an excess of dd-bar sea pairs as compared to uu-bar sea pairs. We form appropriate combinations of quantities in v and v-bar DIS which are sensitive to this flavour asymmetry of the sea. Estimates of the sensitivity of these quantities to the flavour asymmetry of the sea are obtained. (author). 4 refs.

7949 (IC–91/133) **General analysis of weak decay form factors in heavy to heavy and heavy to light baryon transitions.** Hussain, F. (International Centre for Theoretical Physics, Trieste (Italy)); Liu Dongsheng; Kraemer, M.; Koerner, J.G.; Tawfiq, S. International Centre for Theoretical Physics, Trieste (Italy). Jun 1991. 22p. Order Number DE92609712. Source: OSTI; NTIS (US Sales Only); INIS.

We present a complete analysis of the heavy to heavy and heavy to light baryon semileptonic decays in the heavy quark effective theory within the framework of a Bethe-Salpeter (B-S) approach and demonstrate the equivalence of this approach to other work in the field. We present in a compact form the baryon B-S amplitudes which incorporate the symmetries manifest in the heavy quark limit and which also show clearly the light quark dynamics. A similar form of the B-S amplitude is presented for light baryons. Using the B-S amplitudes, the heavy to heavy and heavy to light semileptonic baryon decays are considered. As expected there is a dramatic reduction in the number of form factors. An advantage of our B-S approach is demonstrated where the form factors are written as loop integrals which in principle can be calculated. (author). 15 refs, 3 figs, 2 tabs.

Includes summary in Dutch.

This thesis describes an experiment performed with the UA1 detector at the Spp-barS at CERN on the production and decay of $W^{\pm}$ bosons in proton-antiproton collisions. In particular the total width of the $W^{\pm}$ resonance has been determined. A direct measurement of this quantity already exists, but with an uncertainty of 70%. Here an indirect method is presented in which this quantity is inferred from the ratio of the $W \rightarrow l\nu$ and $Z \rightarrow$ ll-bar partial cross sections measured at pp-bar colliders and the total width of the Z boson, accurately measured at LEP. It exploits the complementary results of pp-bar and e^+e^- machines and allows to bring down the uncertainty on the total width to about 8%. The results is compared with the Standard Model prediction and its implication for the mass of the top quark is investigated. Also the possibility to put a constraint on the masses of the new elementary particles predicted by the Super Symmetry model is considered. (author). 126 refs.; 67 figs.; 23 tabs.

7959 (LA-UR–91-3962) **Nuclear effects on heavy quark production: Results from Fermilab Experiments E772 and E789.** E772 and E789 Collaborations. Los Alamos National Lab., NM (United States). [1991]. 12p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-9111165–1: Quark matter '91, Gatlinburg, TN (United States), 11-15 Nov 1991). Order Number DE92005067. Source: OSTI; NTIS; INIS; GPO Dep.

Fermilab Experiments E772 and E789 are fixed target experiments with 800 GeV protons incident on nuclear targets corresponding to a center-of-mass energy of $\sqrt{s} \sim 39$ GeV. Measurements are made with a pair spectrometer which has a solid angle of a few percent and operates at high luminosity with up to $\sim 10^{12}$(E772) or $\sim 10^{11}$(E789) protons/spill. Our experimental program explores several types of nuclear medium effects: the modification of quark and gluon structure functions by the nucleus, effects on the production of vector mesons (e.g. J/ψ and γ), and effects on the production of D mesons. The latter is accomplished with the use of a new silicon vertex detector. E789 also looks at the decays of B mesons including the decay to J/ψ and searches for the decays to two-charged particles (e.g. $B \rightarrow h^+h^-$) but I will not discuss this part of our program in this paper.

7960 (LYCEN–91-06) **Neutrino scattering and pion physics.** Ericson, M. (Lyon-1 Univ., 69 - Villeurbanne (FR). Inst. de Physique Nucleaire). Lyon-1 Univ., 69 - Villeurbanne (France). Inst. de Physique Nucleaire. 1991. 12p. (CONF-9007206–: 7. International School of Intermediate Energy Nuclear Physics, L'Aquila (Italy), 16-26 Jul 1990). Order Number DE92743610. Source: OSTI; NTIS (US Sales Only).

In the forward direction neutrino scattering is linked to pion physics. We discuss the occurrence of a shadow effect in the forward neutrino cross-section on nuclei, owing to the collective nature of the pionic nuclear response.

7961 (NIKHEF-H–91-15) **Searching for supersymmetry at LEP/LHC.** Janssen, M.M.J.F. (Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H). Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H. Jul 1991. 23p. Order Number DE92614204. Source: OSTI; NTIS (US Sales Only); INIS.

For the ep collider at LEP/LHC, the production and the signal coming from s-leptons and s-quarks are studied for several processes. It is shown how the supersymmetry signal can be extracted from the Standard Model background processes. In particular the large backgrounds due to single W and Z production are considered. All the results are based on exact calculations of the matrix elements at tree level. Total cross sections and various kinematical distributions are presented. (author). 20 refs.; 7 figs.; 3 tabs.

7962 (SLAC-PUB–5669) **An amplitude analysis of the $K\bar{K}$ and $\pi^+\pi^-$ systems ($M < 2$ GeV/c^2) produced in J/ψ radiative decay.** Chen, Liang-Ping (Vanderbilt Univ., Nashville, TN (United States)). MARK III Collaboration. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Oct 1991. 4p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00515 ;AC02-76ER01195 ;AC02-87ER40318 ;AC03-81ER40050 ;AM03-76SF00010. (CONF-910864–7: 4. international conference on hadron spectroscopy, College Park, MD (United States), 12-16 Aug 1991). Order Number DE92004775. Source: OSTI; NTIS; INIS; GPO Dep.

A mass independent amplitude of the $K\bar{K}$ and $\pi^+\pi_-$ systems ($M < 2$ GeV/c^2) produced in J/ψ radiative decay is presented. For the first time a large spin zero component in the θ(1720) mass region is observed, with all data samples analyzed. A small amount of spin two component in this mass region for the $K\bar{K}$ data samples is not ruled out with the present statistics. This study reveals, also for the first time, the production of the $f_o(1400)$ in the $\pi^+\pi^-$ channel, and refines previous measurements of the $f_2(1270)$ and $f'_2(1525)$. 13 refs., 2 figs., 2 tabs.

Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. (CONF-9107172–5: 15. joint international lepton photon symposium at high energies and European Physical Society (EPS) conference on high energy, Geneva (Switzerland), 25 Jul - 1 aug 1991; BROWN-HET–838). Order Number DE92004161. Source: OSTI; NTIS; INIS; GPO Dep.

We suggest that a short-lived axion-like particle η_6 with mass around 30 GeV should be produced diffractively at hadron colliders. This is the lightest particle belonging to a new color- sextet quark sector of QCD which could be responsible for dynamical symmetry breaking of the electroweak interaction.

7964 (BNL–46863) **Double-Pomeron and two-photon processes at RHIC.** Chung, S.U.; Weygand, D.P.; Willutzki, H.J. Brookhaven National Lab., Upton, NY (United States). Nov 1991. 30p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH00016. Order Number DE92005039. Source: OSTI; NTIS; INIS; GPO Dep.

Double-Pomeron processes have been shown to be an important and novel source of hadron production at moderate energies at the ISR. These processes are expected to provide glue-rich hadrons from 1 GeV to 10 GeV or more, encompassing the states consisting of u, d, s and b quarks. The double-pomeron cross sections for central hadroproduction are calculated for p × p and Au × Au at RHIC. Two-photon production of hadrons in the central region begins to dominate or at least become comparable to the double-Pomeron processes as the Z of the beams increases from p to Au. Since photons couple to charge, these hadroproductions involve mainly quarkonia and multiquark states. Therefore, a comparative study of these processes is expected to provide new insights into the constituents of hadronic matter. The two-photon processes are calculated following the recipe given by Cahn and Jackson. The paper starts out with a thorough discussion of the relevant kinematics, phase space and Regge amplitudes.

7965 (DESY–91-093) **The package PAKPDF ver. 1.1 of parametrizations of parton distribution functions in the proton.** Charchula, K. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany). Aug 1991. 18p. Order Number DE92758962. Source: OSTI; NTIS (US Sales Only); INIS.

Any computer with FORTRAN 77 compiler (IBM, VAX ...); FORTRAN 77.

A FORTRAN package containing parametrizations of parton distribution functions (PDFS) in the proton is described. It allows an easy access to PDFS provided by several recent parametrizations and to some parameters characterizing particular parametrization. Some comments about the use of various parametrizations are also included. (orig.).

7966 (DOE/ER/40107–10A) **[Experimental investigation of the production of glueballs and meson resonant states]: Technical progress report for the period ending January 15, 1992.** Lindenbaum, S.J. City Coll., New York, NY (United States). 13 Nov 1991. 22p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-83ER40107. Order Number DE92004055. Source: OSTI; NTIS; INIS; GPO Dep.

We have made striking and considerable progress in our AGS program which is searching for a Quark-Gluon Plasma or other new phenomena at the AGS. We are employing a TPC Tracking Magnetic Spectrometer that has handled up to ≈ 100 tracks, the maximum observed in 14.5 GeV/c × A Si ions incident on Au and Cu. In essence the TPC covers more than the forward half hemisphere in the nucleon-nucleon cms (i.e. $\geq 2\pi$) and thus allow tracking, momentum and angular analysis of the charged particles emitted in these heavy ion collisions. Particle identification for negative pions can be made approximately by assuming negative particles are pions. Then by subtraction of negatives from positives in a suitable manner the proton characteristics can be determined. Λ and K_s° V particles have been identified singly in events and $\approx$ 50 double Λ and 2 triple Λ events have been observed in the relatively small data sample ($\sim$ central like events) we have obtained and analyzed this year.

7967 (DOE/ER/40150–178) **Few-body experimental program at CEBAF.** Mougey, J. Southeastern Universities Research

Association, Newport News, VA (United States). Continuous Electron Beam Accelerator Facility. [1991]. 16p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84ER40150. (CEBAF-PR-91-046;CONF-9109122-6: 13. European conference on few-body problems in physics, Elba (Italy), 9-14 Sep 1991). Order Number DE92005090. Source: OSTI; NTIS; INIS; GPO Dep.

Nearly two thirds of the initial CDBAF physics proposals deal with experimental studies of the nucleon and few nucleon $(A \leq 4)$ systems. These studies include the structure of nucleons at high Q^2, the electro- and photodisintegration of the deuteron, and the short distance structure of ^{3}He and ^{4}He. Emphasis is given to coincidence experiments and measurements of polarization observables. 59 refs., 8 figs., 1 tab.

7968 (DOE/ER/40243-8) **Medium energy elementary particle physics: Technical progress report, August 1, 1990–June 30, 1991.** Yale Univ., New Haven, CT (United States). [1991]. 13p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-86ER40243. Order Number DE92004413. Source: OSTI; NTIS; INIS; GPO Dep.

This report discusses the following topics: muon beam development at LAMPF; muon physics; a new precision measurement of the muon g-2 value; measurement of the spin-dependent structure functions of the neutron and proton; and meson factories. (LSP)

7969 (DOE/ER/40427-24-N91) **Some measurements for determining strangeness matrix elements in the nucleon.** Henley, E.M. (Washington Univ., Seattle, WA (United States)); Pollock, S.J.; Ying, S.; Frederico, T.; Krein,; Williams, A.G. Washington Univ., Seattle, WA (United States). [1991]. 6p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-88ER40427. (CONF-9109122-5: 13. European conference on few-body problems in physics, Elba (Italy), 9-14 Sep 1991). Order Number DE92004272. Source: OSTI; NTIS; INIS; GPO Dep.

Some experiments to measure strangeness matrix elements of the proton are proposed. Two of these suggestions are described in some detail, namely electro-production of phi mesons and the difference between neutrino and antineutrino scattering for isospin zero targets such as deuterium.

7970 (DOE/ER/40561-20) **Strong CP violation and the neutron electric dipole moment revisited.** Aoki, Sinya (State Univ. of New York, Stony Brook, NY (United States). Inst. for Theoretical Physics); Hatsuda, Tetsuo. Washington Univ., Seattle, WA (United States). Inst. for Nuclear Theory. Jul 1991. 26p. Sponsored by U.S. DOE Energy Research; National Science Foundation. DOE Contract FG06-90ER40561. Grant NSF-PHY-89-08495. Order Number DE92004373. Source: OSTI; NTIS; INIS; GPO Dep.

The relation between the CP violating operator $\theta F\tilde{F}$ and its effective version $L_{CP}{}^{eff}$ is reconsidered on the basis of the anomalous Ward-Takahashi (WT) identity. The consistency of the previous phenomenological calculations of the neutron electric dipole moment (NEDM) with the WT identity is critically examined. A consistent evaluation of an $O(N_c{}^{o})$ contribution to NEDM is given and the result is compared with the leading term in the chiral expansion which is $O(N_c{}^{-1})$.

7971 (DOE/ER/40561-21) **Measuring strangeness matrix elements of the nucleon.** Henley, E.M. (Washington Univ., Seattle, WA (United States)); Pollock, S.J.; Krein, G.; Williams, A.G. Washington Univ., Seattle, WA (United States). [1991]. 10p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-90ER40561. Order Number DE92004374. Source: OSTI; NTIS; INIS; GPO Dep.

Experiments are proposed to measure various strangeness matrix elements of the nucleon. Examples are electro- and neutrinoproduction of phi mesons and the difference between neutrino and antineutrino scattering from isospin zero targets, e.g., deuterons.

7972 (DOE/ER/40561-24) **Good component approach in light-cone quantum mechanics of the deuteron form-factors.** Strikman, M.I.; Frankfurt, L.L.; Frederico, T. Washington Univ., Seattle, WA (United States). Inst. for Nuclear Theory. 17 Aug 1991. 26p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-90ER40561 ;FG06-88ER40427. (DOE/ER/40427-21-N91). Order Number DE92004377. Source: OSTI; NTIS; INIS; GPO Dep.

We discuss the criteria for the choice of matrix elements of the "good" component of the current in the calculation of deuteron form-factors in Light-Cone Quantum Mechanics. We use the infinite-momentum frame matrix elements of the currents and boost them to the Briet-frame which is utilized often in the numerical calculations. We show in a straight-forward procedure how to deal with such transformations. It can be easily generalized to other cases. The electromagnetic functions $A(q^2)$ and $B(q^2)$ and axial form-factor are obtained and compared with previous calculations. We study the tensor polarization of the deuteron.

7973 (DOE/ER/40561-29) **Flavor symmetry in the large N_c limit.** Karl, G. (Guelph Univ., ON (Canada). Dept. of Physics); Lipkin, H.J. Washington Univ., Seattle, WA (United States). Inst. for Nuclear Theory. [1991]. 9p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-90ER40561. Order Number DE92004384. Source: OSTI; NTIS; INIS; GPO Dep.

An essential difference between two-flavor and three-flavor descriptions of baryons in large N_c QCD is discussed in detail. For $N_c \geq 3$ a state with the SU(3) flavor quantum numbers of the proton must contain a number of strange quarks $n_s \geq (N_c-3)/3$, while a state with no strange quarks must have extra hypercharge $Y-1 = 3/N_c-1$. The extra strangeness or extra hypercharge which vanishes for $N_c = 3$ is spurious for the physical proton. This problem does not arise in two-flavor QCD, where the flavor-SU(2) Skyrmion may give a good approximation for nucleon-pion physics at low energies below strangeness threshold. But any nucleon model with SU(3) flavor symmetry which is interpreted as arising from the large N_c limit in QCD can lead to erroneous conclusions about the spin and flavor structure of the proton. 12 refs.

7974 (DOE/ER/40561-30) **Old and new physics in nucleon spin structure.** Lipkin, H.J. (Weizmann Inst. of Science, Rehovoth (Israel). Dept of Physics). Washington Univ., Seattle, WA (United States). Inst. for Nuclear Theory. [1991]. 6p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-90ER40561. Order Number DE92004385. Source: OSTI; NTIS; INIS; GPO Dep.

EMC implies quarks carry very little of the proton spin. $(G_A/G_V)_{n\to p}$ implies that valence quarks carry 70% of the spin, but disagrees with SU(6). $(G_A/G_V)_{\Sigma^-\to n}$ agrees strinkingly with SU(6). All semileptonic decay data can be fit by SU(3), but no model fits the data by breaking SU(6) without also breaking SU(3). Considerable data on hadron masses and magnetic moments are fit by a simple constituent quark model with only constituent quarks. A toy model for the proton with valence quarks and sea fits nearly everything.

7975 (DOE/ER/45445-3) **Research using ultracold neutrons at the ILL.** Steyerl, A. Rhode Island Univ., Kingston, RI (United States). [1990]. 12p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-91ER45445. (CONF-9010278-2: 6. international school on neutron physics, Alushta (USSR), 8-18 Oct 1990). Order Number DE92004842. Source: OSTI; NTIS; INIS; GPO Dep.

In this talk I will make no effort to give an exhaustive, detailed description of the well-published results of recent work with ultracold neutrons (UCN) at the ILL. Instead, there will be a biased selection of some topics in which author happens to be most interested, though in some cases as a spectator from a considerable distance than as an actor. The selection includes the recent lifetime experiment using a Fomblin-coated bottle, the continuing search for an electric dipole moment of the neutron and some ideas on high precision neutron optics experiments.

7976 (FNAL/C-91/294-E) **Top search at CDF.** Contreras, M. (Chicago Univ., IL (United States)). The CDF Collaboration. Fermi National Accelerator Lab., Batavia, IL (United States). Oct 1991. 5p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH03000. (CONF-9107172-9: 15. joint international lepton photon symposium at high energies and European Physical Society (EPS) conference on high energy, Geneva (Switzerland), 25 Jul - 1 aug 1991). Order Number DE92004803. Source: OSTI; NTIS; INIS; GPO Dep.

We review top quark searches carried out at CDF with data collected during the 1988–1989 Collider Run. The latest analyses give a lower limit on the top quark mass of 91 GeV/c^2 at the 95% confidence level, assuming Standard Model decays. 8 refs., 6 figs., 1 tab.

7977 (IC–91/134) **The B_c and B-bar$_c$ mesons accessible to experiments through Z^0 boson decay.** Chang Chaohsi (International Centre for Theoretical Physics, Trieste (Italy)); Chen Yuqi. International Centre for Theoretical Physics, Trieste (Italy). Jun 1991. 15p. (AS-ITP–91-19;CCAST–91-21.). Order Number DE92609743. Source: OSTI; NTIS (US Sales Only); INIS.

The B_c and B-bar$_c$ meson production with jets through Z^0 decay is computed based on the Standard Model. The result shows that about one thousand and four hundred events involving one B_c or B-bar$_c$ meson will be obtained, if 10^7 Z^0 intermediate bosons are accumulated such as planned for LEP-I. The cross section of $e^+e^- \rightarrow B_c$ + jets (or B-bar$_c$ + jets) for the energy from 15 GeV to 60 GeV is also presented. (author). 11 refs, 3 figs, 2 tabs.

7978 (IC–91/140) **Properties of B_c-meson in QCD sum rules.** Aliev, T.M. (Istanbul Univ., Istanbul (Turkey). Physics Dept.); Yilmaz, O. International Centre for Theoretical Physics, Trieste (Italy). Jun 1991. 13p. Order Number DE92609744. Source: OSTI; NTIS (US Sales Only); INIS.

We have studied the masses of the scalar, pseudoscalar and vector states of B_c-meson and their constants in the framework of the QCD sum rules. (author). 10 refs, 6 figs.

7979 (IC–91/161) **On gauge invariance of the renormalized Z^0 rest mass.** Ward, B.F.L. International Centre for Theoretical Physics, Trieste (Italy). Jul 1991. 6p. Contract DE-AS05-76ER03956;Contract DE-AC05-76SF00515;Grant RCFY Order Number DE92615300. Source: OSTI; NTIS (US Sales Only); INIS.

The properly renormalized Z^0 rest mass is shown to be gauge invariant in the rigorous, complete on-shell renormalization scheme. Thus, the mass measured at LEP/SLC is indeed a physical observable and can be used as a basic parameter of the $SU_{2L}xU_1$ theory, as indeed it has so been. (author). 8 refs.

7980 (IC–91/291) **Heavy baryon transitions and the heavy quark effective theory.** Hussain, F. International Centre for Theoretical Physics, Trieste (Italy). Sep 1991. 11p. Order Number DE92615301. Source: OSTI; NTIS (US Sales Only); INIS.

Heavy baryon decays are studied in the context of the Bethe-Salpeter approach to the heavy quark effective theory. A drastic reduction, in the number of independent form factors, is found. Results are presented both for heavy to heavy and heavy to light baryon decays. (author). 17 refs, 3 figs, 2 tabs.

Submitted to Z. Phys., C.

Octet $(1^+/2)$ and decuplet $(3^+/2)$ of baryons as relativistic three-quark states are investigated in the quark confinement model (QCM), the relativistic quark model, based on some assumptions about hadronization and quark confinement. The quark-diquark approximation of the three-quark structure of baryons is proposed. In the framework of this approach the description of the main low-energy characteristics of baryons as magnetic moments, electromagnetic radii and form factors, ratio of axial and vector constants in semileptonic baryon octet decays, strong form factors and decay widths is given. The obtained results are in agreement with experimental data. 31 refs.; 4 figs.; 5 tabs.

7993 (Juel--2469) **Workshop on mesons and mesonic states up to slightly above 1 GeV/c^2.** Oelert, W.; Sefzick, T. (eds.). Forschungszentrum Juelich GmbH (Germany). Inst. fuer Kernphysik. Apr 1991. 213p. (CONF-9002204--: Workshop on mesons and mesonic states up to slightly above 1 GeV/c^2, Juelich (Germany), 19-20 Feb 1990). Order Number DE92758891. Source: OSTI; NTIS (US Sales Only); INIS.

The new accelerator COSY-Juelich will provide protons with momenta up to 3.3 GeV/c. Thus an effective mass slightly above 1 GeV/c^2 can be produced in the pp-interaction. Employing higher mass targets also heavier mesons can be observed. The production of single mesons and of mesonic states with and without strangeness can be investgated at COSY. The structure of some mesons in the mass range of 950 MeV/c^2 to 1020 MeV/c^2 is still not well understood. While the $\Phi(1020)$ at the upper limit of this range is believed to be of rahter pure santi s nature the content of the $\eta'(958)$ meson at the lower limit of this range is still under discussion. New results suggest that what is called the f_0 meson (former notation S^*) consists in reality of two close and narrow states; one of them being a santi s - quarks configuration while the other should be a flavour singlet which couples to $\pi\pi$ and Kanti K with similar strengths. Also the discussion on possible gluonium candidates is still alive. It is speculated that some of these mesons - till now supposed to have widths of 30 to 50 MeV/c^2 - could rather be an overlay of structures with much smaller widths. Another features of resonances in this region is their partial decay into the Kanti K channel if their actual mass is large enough. Strong decays in Kanti K could be a signal of a Kanti K 'molecular' nature of the resonance. In particular the atomic K^+K^- structure should exist. In order to have review of the physics related to these problems there was a workshop held on: MESONS and MESONIC STATES up to slightly above 1 GeV/c^2 at the ZEL - Forschungszentrum - Juelich February 19 to 20, 1990. The following contains copies of the shown transparencies and short write-ups as far as available. (orig.).

Order Number DE92004745. Source: OSTI; NTIS; INIS; GPO Dep.

This report contains a talk on experiments to detect neutrino oscillations. (LSP)

7996 (WUB--90-13) **Structure function measurements in the deep inelastic muon-nucleon scattering.** Peschel, H. Wuppertal Univ. (Gesamthochschule) (Germany). Fachbereich 8 - Naturwissenschaften 1 - Physik. Mar 1991. 151p. (In German). Order Number DE92758921. Source: OSTI; NTIS (US Sales Only); INIS.

Measurements of deep inelastic scattering events on a combined copper and deuterium target were performed by the European Muon Collaboration (EMC) using a muon beam at CERN's SPS with energies at 100 GeV and 280 GeV. The data are analysed and compared with a detailed Monte-Carlo simulation and allow the determination of structure functions from both targets. In the light of the present discrepancy between EMC's and BCDMS's structure functions, stringend cuts were applied to the data. The results confirm the EMC structure function measurements on unbound nucleons. The comparison between the copper structure function from this experiment and the NA2 iron structure function shows a trend to lower values at low x_{Bj}. (orig.).

Despite years of study there are still major unanswered questions concerning the shapes of medium and heavy nuclei and the nature of their intrinsic excitations. Some of these questions may profitably be addressed by exploiting the simplicities inherent in algebraic models. Examples, using the IBA, focusing on axial asymmetry, the nature of β and γ vibrations, and octupole correlations will be briefly discussed.

7999 (CONF-8908129–6) **Evolution of nuclear collectivity at high spins and temperatures.** Baktash, C. Oak Ridge National Lab., TN (United States). [1989]. 14p. Source: OSTI; NTIS; INIS; GPO Dep.

In the past few years, we have utilized the Spin Spectrometer and a variety of complementary probes (continuum γrays, proton-γ coincidence spectroscopy and γ decay of GDR) to study the nuclear response to the DIFFERENTIAL effects of increasing spin and temperature for constant values of excitation energy or spin, respectively. In this paper we shall describe two of the experiments that trace the properties of rapidly-rotating nuclei at small to moderate excitation energies. 22 refs., 7 figs.

8000 (CONF-9103176–4) **Finite-temperature effects in warm nuclei: Recent developments and open questions.** Baktash, C. Oak Ridge National Lab., TN (United States). [1991]. 22p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From Workshop on future directions in nuclear physics with 4π gamma detection systems of the new generation; Strasbourg (France); 4-16 Mar 1991. Order Number DE92004221. Source: OSTI; NTIS; INIS; GPO Dep.

Study of the finite-temperature effects in nuclear systems remain one of the least explored subjects in low-energy nuclear physics, despite the fact that dramatic structural changes are expected to unfold as the excitation energy of the system is increased. Gradual vanishing of the pairing correlations, onset of chaos and rotational damping, prolate-to-oblate shape changes, melting of the shell effects, and eventually the inability of the compound nucleus (CN) to sustain giant resonances at very high temperatures ("death" of CN) are only a few examples of the rich and varied phenomena yet to be explored. Equally important is the question of thermal fluctuations and the extent to which they modify the above phase transitions. However, a prerequisite to the study of these fascinating questions is a detailed understanding of the formation and decay modes of compound nucleus which is astonishingly, lacking at present. In this chapter we shall discuss some recent experimental and theoretical developments that (a) raise new questions about these pivotal issues, and (b) provide clues and directions toward their resolution. They include questions of equilibration of CN (entrance-channel effects in fusion reactions, and structural effects in evaporation-proton spectra), and variations of the gamma strength functions with spin and temperature which directly affect deexcitation of CN following particle emission.

8001 (DOE/ER/40330–50) **Nuclear structure from radioactive decay: Annual progress report.** Wood, J.L. Georgia Inst. of Tech., Atlanta, GA (United States). School of Physics. 30 Sep 1991. 12p. Sponsored by U.S. DOE Energy Research. DOE Contract FG05-87ER40330. Order Number DE92003673. Source: OSTI; NTIS; INIS; GPO Dep.

This report discusses nuclear structure from radioactive decay of the following: Neutron-Deficient Iridium Isotopes; Neutron-Deficient Platinum Isotopes; Neutron-Deficient Gold Isotopes; Neutron-Deficient Mercury Isotopes; Neutron-Deficient Thallium Isotopes; Neutron-Deficient Lead Isotopes; Neutron-Deficient Samarium Isotopes; Neutron-Deficient Promethium Isotopes; Neutron-Deficient Neodymium Isotopes; and Neutron-Deficient Praseodymium Isotopes. Also discussed are Nuclear Systematics and Models.

8002 (DOE/ER/40405–T4) **Nuclear structure studies at intermediate energies: Progress report, July 1990–July 1991.** Hintz, N.M. Minnesota Univ., Minneapolis, MN (United States). School of Physics and Astronomy. Jul 1991. 31p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-88ER40405. Order Number DE92004332. Source: OSTI; NTIS; INIS; GPO Dep.

This report discusses the following topics: development of (p, 2p) coincidence studies at MRS; analysis of ^{206,207,208}Pb(p, p′) data from E855; and computer program development.

8003 (DOE/ER/40405–T5) **Nuclear structure studies at intermediate energies: Summary progress report, 1987–1990.** Hintz, N.M. Minnesota Univ., Minneapolis, MN (United States). School of Physics and Astronomy. Jul 1990. 154p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-88ER40405. Order Number DE92004109. Source: OSTI; NTIS; INIS; GPO Dep.

This report discusses the following topics: Search for dibaryon resonances; analysis of ^{208}Pb($\pi^{\pm}$,$\pi^{\pm}$) data; analysis of ^{206,207,208}Pb(p,p′) data; study of transition nuclei by (p,p′); search for recoil free δ-production; search for low lying magnetic states; proton nucleus scattering and swelling of nucleons; measurement of spin observables in ^{28}Si(p,p′); strength of tensor force in nuclei; global analysis of (p,p′) reactions to high spin states in ^{28}Si and ^{58}Ni and density dependent modifications; MRS Setup and development; and development of coincidence studies with the MRS.

8004 (DOE/ER/40561–15) **Models of fragmentation phenomena based on the symmetric group S_n and combinational analysis.** Mekjian, A.Z. (Washington Univ., Seattle, WA (United States). Inst. for Nuclear Theory); Lee, S.J. Washington Univ., Seattle, WA (United States). Inst. for Nuclear Theory; Rutgers–the State Univ., Piscataway, NJ (United States). Dept. of Physics and Astronomy. 29 Jan 1991. 41p. Sponsored by U.S. DOE Energy Research; National Science Foundation. DOE Contract FG06-90ER40561. Grant 89-03457. Order Number DE92004368. Source: OSTI; NTIS; INIS; GPO Dep.

Various models for fragmentation phenomena are developed using methods from permutation groups and combinational analysis. The appearance and properties of power laws in these models are discussed. Various exactly soluble cases are studied.

8005 (DOE/ER/40561–17) **The classical EMC effect from few-body systems to nuclear matter: Can binding effects explain it?.** Ciofi degli Atti, C. (Washington Univ., Seattle, WA (United States). Inst. for Nuclear Theory); Liuti, S. Washington Univ., Seattle, WA (United States). Inst. for Nuclear Theory. 14 May 1991. 13p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-90ER40561. Order Number DE92004370. Source: OSTI; NTIS; INIS; GPO Dep.

It is shown that if the effects of nucleon binding on deep inelastic scattering are considered within many-body realistic descriptions of nuclei which include nucleon-nucleon correlations, the EMC effect in light and medium weight nuclei and nuclear matter can be accounted for in the region $0.2 \leq x \leq 0.5$, but a systematic discrepancy between theory and experiment remains to be explained for $0.5 \leq x \leq 0.9$.

8006 (DOE/ER/40640–1) **Theoretical studies in nuclear structure: Progress report, June 1, 1991–November 30, 1991.** Marshalek, E.R. Notre Dame Univ., IN (United States). Nov 1991. 10p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-91ER40640. Order Number DE92004025. Source: OSTI; NTIS; INIS; GPO Dep.

In this period, the work has centered on two topics. The first is the study of a novel type of collective rotation in which an atomic nucleus with an inversion-symmetric shape rotates uniformly about an axis that is not a principal axis of the quadrupole tensor of the density distribution. This mode is referred to as tilted rotation. By using the cranking model together with higher-order corrections, it was shown that tilted rotation is indeed possible, not only within a microscopic framework, but also within the framework of collective models such as the IBM. The maximum tilt angle of $\pi/4$ is realized for a certain class of states in the U(5) limit. The second topic, which actually was suggested during the course of the first investigation, is concerned with a new way of representing collective harmonic-oscillator algebras using boson-mapping techniques. In this approach, the many-phonon eigenvectors of a $2\lambda+1$-dimensional oscillator having good angular momentum are represented by simple products of boson operators acting on a vacuum. This representation may simplify the calculation of reduced matrix elements of arbitrary operators in collective models, but more work needs to be done.

8007 (IC–91/29) **6p-2h core excitations in ^{20}O.** Amusa, A. International Centre for Theoretical Physics, Trieste (Italy). Feb 1991. 37p. Order Number DE92615304. Source: OSTI; NTIS (US Sales Only); INIS.

The effects of intruder states arising from general positive deformations on the excitation energies, the two-neutron transfer spectroscopic amplitudes for the reaction $^{18}O(t,p)^{20}O$, and some electric quadrupole transition amplitudes between some low-lying positive parity states in ^{20}O are presented. The Hamiltonian matrix elements that reproduce experimental data best are also presented along with a general comparison of the results with experiment and with pure $(sd)^4$ shell model results. (author). 19 refs, 2 figs, 5 tabs.

Submitted to Phys. Lett., B.

Results on a high statistics study of the nucleon structure functions $F_2(x, Q^2)$ and $R=\sigma_L/\sigma_T$ measured in deep inelastic scattering of muons on a deuterium target are given. The analysis is based on $8x10^5$ events after all cuts, recorded at beam energies of 120,200 and 280 GeV in the kinematic range $0.06 \leq x \leq 0.80$ and 8 $\mathrm{GeV}^2 \leq Q^2 \leq 260\ \mathrm{GeV}^2$. Scaling violations observed in the data are in agreement with predictions of perturbative QCD and allow one to determine the QCD mass scale parameter Λ. 22 refs.; 4 figs.; 6 tabs.

8038 (Juel–2453) **Shape changes in the nucleus ^{180}Os at high angular moments.** Schnare, H. Forschungszentrum Juelich GmbH (Germany). Inst. fuer Kernphysik; Bonn Univ. (Germany). Mar 1991. 139p. (In German). Order Number DE92758894. Source: OSTI; NTIS (US Sales Only); INIS.

For the study of the shape changes in the nucleus ^{180}Os at high angular momenta high-spin states were excited in a ^{150}Nd(^{36}S,6n) compound-nucleus reaction. The emitted γ radiation was measured with the 12 anti-Compton spectrometers and the γ calorimeter of the OSIRIS apparature. In the $E\gamma E\gamma$ correlation matrices in the energy range 660-860 keV and above 900 keV peak structures were observed from which the dynamic moment of inertia of the nucleus could be derived. (orig./HSI).

In *Proceedings of the specialists' meeting on physics and engineering of fission and spallation, 1990.* 118p. Order Number DE92713857. Source: OSTI; NTIS (US Sales Only); INIS.

The nuclear charge distribution function is derived from statistical theory as a function of the most probable charge transfer variable defined by the difference between the most stable charges of fission fragments. The fine structures observed in the charge distribution width, skewness and excess can be described by the present formula in terms of a charge shift parameter due to shell and pairing effects. The charge shifts from simple liquid drop model are obtained from the mass formula based on shell model. Resultant fine structure constants have finer structures than experimental data although general trends can be reproduced by present theory. (author).

8040 (LA-UR-91-3497) **Exploration of the neutron-rich mass surface from ^{11}Li to ^{66}Fe.** Vieira, D.J. (Los Alamos National Lab., NM (United States)); Wouters, J.M.; Butler, G.W.; Seifert, H.L.; Zhou, Z.Y.; Zhou, X.G.; Tu, X.L.; Lind, V.G.; Loebner, K.E.G. Los Alamos National Lab., NM (United States). [1991]. 7p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-9106196-4: Nuclear shapes and nuclear structure at low excitation energies, Cargese (France), 3-7 Jun 1991). Order Number DE92003796. Source: OSTI; NTIS; INIS; GPO Dep.

A small revolution in our ability to perform mass measurements of light-mass, neutron-rich nuclei has occurred during the last five years with the extension of the direct, total mass measurement method to fast recoiling nuclei. To date the work of two groups, one using the SPEG spectrometer at GANIL and the other using the TOFI spectrometer at LAMPF, has yielded over 85 mass measurements of which 62 had not been reported previously. Extending from the neutron-halo nucleus ^{11}Li up to ^{66}Fe, a region relevant to the astrophysical r-process, these measurements have provided a valuable first glimpse into the interesting nuclear structure present in many of these exotic nuclei. Herein we highlight the nuclear structure insight which as been gained from these measurements, especially that learned from a comparison to recent shell model calculations. Attention is given to: (1) the binding of loosely-bound neutron halo nuclei; (2) the N=14–16 region in the neutron-rich isotopes of O, F, and Ne where the strong two-body interaction plays an important role; (3) the deformed intruder state region around ^{31}Na of long standing interest; (4) the neutron-rich isotopes of sulfur and chlorine; and (5) the question of the isospin dependence (or independence) of neutron and proton pairing energies in the fp shell. Only the briefest account of this work can be given here; emphasis is placed on the most recent results. 24 refs., 3 figs.

8041 (LA-UR-91-3719) **SU(3) symmetries in exotic neutron-rich nuclei.** Hayes, A.C. Los Alamos National Lab., NM (United States). [1991]. 12p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-9105291-1: Exotic neutron-rich nuclei, Darmstadt (Germany), 5-7 May 1991). Order Number DE92003870. Source: OSTI; NTIS; INIS; GPO Dep.

We examine the structure of the exotic neutron-rich nucleus ^{11}Li with an emphasis on understanding the origin of the soft E1 resonance and the neuron halo. The similarities and differences between shell model and di-neutron cluster model descriptions of the system are displayed using the Hecht expansion techniques. We find that the ground state ^{11}Li as described in large shell model calculations is well approximated by the di-neutron cluster state. In contrast to the ground state, the soft E1 model of ^{11}Li appears to have a more complicated structure and the E1 strength of this resonance is very sensitive to cancellations between p→s and p→d contributions to the dipole matrix elements. 12 refs., 6 figs., 3 tabs.

8045 (JINR-E-3-90-45) **Intensities of two-quanta cascades at different excitation energies of compound nuclei ^{146}Nd, ^{174}Yb, ^{183}W.** Boneva, S.T.; Khitrov, V.A.; Sukhovoj, A.M.; Vojnov, A.V. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics. 1990. 14p. Order Number DE92609950. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Z. Phys., A: At. Nuclei.

Intensities of two-quanta cascades are obtained for 2-3 final low-lying levels of the following nuclei ^{146}Nd, ^{174}Yb and ^{183}W. These measured intensities are compared with the intensities calculated in the frame of various models at primary transition energies ranging from 0.5 MeV to the neutron binding energy. Some excitation energy intervals are revealed, experimentally obtained intensities of cascade are inconsistent with model calculations. 15 refs.; 7 figs.

Austern and Blair have established the connection between inelastic and elastic nuclear scattering of strongly absorbed particles in the adiabatic approximation. Simple closed expressions again in the adiabatic approximation, under strong absorption condition, for the inelastic scattering cross-section are obtained and made explicit by Potgieter and Frahn; which are analogous to the strong absorption model formulae for elastic scattering. We derive the inelastic scattering cross-section for transitions L = 2 and 3 using their general formulations and test the derived formulae with experiments. (author). 6 refs, 1 fig.

This work, through comparing the weighted average values for experimental data with the recommended average ones in a variety of small energy interval that group the sets of reaction cross sections, obtains a system of linear equations for the adjusted factors generated by alteration for the experimental data, which makes it possible to solve the question of covariance for the evaluated data considering all physical alteration. The covariance matrices of some dosimetry reaction cross sections are calculated by this method. 5 refs.

It is important to use computer codes with high precision for analyzing the physical process in the intense neutron source induced by the high energy proton beam. A brief description is given for the spallation and fission reactions and the particle transport codes which have been developed and upgraded at JAERI. The simulation code for High Energy Nuclear Reaction Process in the energy range of 15 MeV to 3 GeV, NMTC/JAERI, is a JAERI version of NMTC which was developed at ORNL and revised later at LANL and BNL. In this version the high energy fission reaction can be calculated, using the statistical model, in competition with the particle evaporation reaction. The mass number A of nuclides which can be dealt in the spallation calculation has been extended from [A=1;8<A<239] to [A=1;6<A<250]. A simulation code NUCLEUS for the spallation reaction of one nucleus without taking into account the internuclear cascade, was also developed to evaluate the computational model for spallation reaction and analyze effectively the data measured in thin foil experiments. For the whole energy range less than 3 GeV, two simulation code systems had been developed by connecting NMTC/JAERI with the neutron transport codes MORSE-DD and TWOTRAN-II respectively. The code SPCHAIN for calculating the time evolution process of spallation products has been developed on the base of the depletion code DCHAIN2, which had been made for the calculations of decay and built-up of fission products in a nuclear reactor. The new nuclear data have been compiled in SPCHAIN data file for about 1100 nuclides needed for TRU spallation calculation. These codes are used to calculate reaction products measured in the spallation experiment using 500 MeV protons in the booster facility of the synchrotron at KEK and to perform the conceptual design study of TRU transmutation system driven by an intense proton accelerator. (author).

8051 (KEK–90-25(v.1), pp. 354-361) **Measurement of neutron activation cross sections by p-Be semi-monoenergetic neutrons.** Nakamura, T. (Tohoku Univ., Sendai (Japan). Cyclotron and Radioisotope Center); Sugita, H.; Kondo, Y.; Uwamino, Y.; Imamura, M. National Lab. for High Energy Physics, Tsukuba, Ibaraki (Japan). Mar 1991. Neutron activation cross sections of C, Na, Mg, Al, Si, Ca, V, Cr, Mn, Cu, Zn and Au, which are mostly constituents of accelerator and building materials, in the energy range of 10 to 40 MeV, by using semi-monoenergetic neutrons from the Be(p,n) reaction. A proton beam of energies of 20, 22.5, 25, 27.5, 30, 32,5, 35, 37.5 and 40 MeV hits the 1-mm and 2-mm thick Be targets which are backed by the water coolant. The induced gamma-ray activities of the irradiated samples were measured with a pure Ge detector and of long-lived ^{26}Al were done by accelerator mass spectrometry. The activation cross section data could be obtained by unfolding technique. (author).

8052 (ANL/CP–73902) **Fast-neutron total and scattering cross sections of ^{58}Ni and nuclear models.** Smith, A.B.; Guenther, P.T.; Whalen, J.F.; Lawson, R.D.; Chiba, S. Argonne National Lab., IL (United States). [1991]. 11p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. (CONF-9111146–1: Meeting of coordinate research program on long lived radionuclides for fusion, Vienna (Austria), 11-12 Nov 1991). Order Number DE92004000. Source: OSTI; NTIS; INIS; GPO Dep.

An extensive experimental and theoretical study of the fast-neutron interaction with ^{58}Ni was undertaken. The neutron total cross sections of ^{58}Ni were measured from $\approx$ 1 to $>$ 10 MeV using white source techniques. Differential neutron elastic-scattering cross sections were measured from $\approx$ 4.5 to 10 MeV at $\approx$ 0.5 Mev intervals with $\geq$ 75 differential values per distribution. Differential neutron inelastic-scattering cross sections were measured, corresponding to fourteen levels with excitations up to $\approx$ 4.8 Mev. The measured results, combined with lower-energy values previously obtained at this laboratory and with relevant values available in the literature, were interpreted in terms of optical-statistical, dispersive-optical and coupled-channels models using both vibrational and rotational coupling schemes. The physical implications of the experimental results and their interpretation are discussed. The considerations are being extended to collective vibrational nuclei generally, exploring the potential for utilizing electro-magnetic matrix elements, deduced from experiment or predicted by the shell model, to determine the strengths of the neutron interaction. Detailed aspects of this work are given in the Laboratory Report, ANL/NDM-120 (in press). 9 refs., 10 figs.

8053 (CNIC–00421) **Charge distribution in the spontaneous fission of ^{252}Cf: Determination of fractional cumulative yields of ^{133m}Te and ^{123g}Te.** Zhang Yanling (Academia Sinica, Beijing, BJ (China). Inst. of Atomic Energy); Li Xueliang; Wang Fangding. China Nuclear Information Centre, Beijing, BJ (China). Nov 1990. 12p. (In Chinese). (IAE–0079.). Order Number DE92614377. Source: OSTI; NTIS (US Sales Only); INIS.

The fractional cumulative yields (FCY) of ^{133m}Te and ^{133G}Te in the spontaneous fission of ^{252}Cf have been determined by the radiochemical method. The values are 0.533 $\pm$ 0.014 and 0.291 $\pm$ 0.042 respectively. The ratio of fractional independent yield of ^{133m}Te to ^{133g}Te was found to be R = 3.5 by using the measured fractional cumulative yields of ^{133m}Te and ^{133g}Te. From these results the initial fragment angular momentum of root-mean-square of ^{133}Te has been deduced. The FCY of $^{133m+g}$Te determined in this work is in good agreement with the expectation value derived from Wahl's system-atics of nuclear charge distribution in the fission. In the mass region of A 131$\approx$141, there is no obvious effect of N = 82 neutron shell and proton pairing effects on the nuclear charge distribution.

8054 (CNIC–00423) **Charge distribution in the spontaneous fission of ^{252}Cf: Determination of cumulative yields of**

^{127g}Sn and ^{128}Sn. Zhao Xin (Academia Sinica, Beijing, BJ (China). Inst. of Atomic Energy); Li Xueliang; Guo Jingru. China Nuclear Information Centre, Beijing, BJ (China). Jul 1990. 12p. (In Chinese). (IAE–0080.). Order Number DE92614378. Source: OSTI; NTIS (US Sales Only); INIS.

The cumulative yields (CY) of ^{127g}Sn and ^{128}Sn in the spontaneous fission of ^{252}Cf have been determined by the radiochemical method. The values are (0.0437 ± 0.0021)% and (0.145 ± 0.007)% respectively. The cumulative yield of ^{128}Sn determined in this work is lower than the expectation value (0.164%) obtained by the empirical Z_p model but in good agreement with the expectation value (0.145%) according to empirical A_p' model. Both the yield of ^{128}Sn measrued and the yields of Tc and In measured in the thermal neutron-induced fission of ^{235}U have shown that the empirical A_p' model is better than Z_p model in representing nuclear charge distribution near the symmetrical range in fission.

8055 (CONF-911113–1) **A dynamical string-Parton model for relativistic heavy-ion collisions.** Umar, A.S. (Vanderbilt Univ., Nashville, TN (United States). Dept. of Physics and Astronomy); Dean, D.J.; Strayer, M.R. Oak Ridge National Lab., TN (United States). [1991]. 5p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From 9. international conference on ultra relativistic nucleus-nucleus collisions; Gatlinburg, TN (United States); 11 Nov 1991. Order Number DE92005159. Source: OSTI; NTIS; INIS; GPO Dep.

We introduce a new model for simulating the hadronic phenomena at relativistic heavy-ion colliders. The model is based on dynamical Nambu strings with extensions to include the essential features of the Parton model. The 3+1 dimensional calculations are performed for various systems, including the leading quark attenuation in μ-A, and A-A results from NA35 and WA80.

8056 (CONF-9103119–4) **Preliminary measurements of shadowing at very low X_{Bj}.** Jaffe, D.E. Fermilab E665 collaboration. Illinois Univ., Chicago, IL (United States). [1991]. 14p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76ER02289. From Moriond meeting on high energy hadronic interactions; Les Arcs (France); 17-23 Mar 1991. Order Number DE92004289. Source: OSTI; NTIS; INIS; GPO Dep.

The ratio of cross sections for deeply inelastic muon scattering on xenon and deuterium nuclei was measured at very low X_{Bj} (.00002 $< X_{Bj} <$ .25) for .01 $< Q^2 <$ 60 $(GeV/c)^2$. The data were taken at Fermilab experiment E665 with an average muon beam energy of 490 GeV incident on 1.1 meter long deuterium and xenon target vessels. Two largely independent analysis techniques gave statistically consistent results and show a smooth decrease in the ratio of the xenon-to-deuterium per-nucleon cross sections from ~ 1 to ~ 0.7 as X_{Bj} decreases from ~ 0.1 to ~ 0.002. In the X_{Bj} range 0.00002 to 0.002, the ratio remains roughly constant at ~ 0.7.

During the report period we have investigated the following areas: Neutron elastic and inelastic scattering measurements on ^{14}N, ^{181}Ta, ^{232}Th, ^{238}U and ^{239}Pu; Prompt fission spectra for ^{232}Th, ^{235}U, ^{238}U and ^{239}Pu; Theoretical studies of neutron scattering; Neutron filters; New detector systems; and Upgrading of neutron target assembly, data acquisition system, and accelerator/beam-line apparatus.

8058 (DOE/ER/40343–5) **Investigation of pion-nucleus interactions: Progress report, April 1, 1990–March 31, 1991.** Moore, C.F. Texas Univ., Austin, TX (United States). Dept. of Physics. Sep 1991. 34p. Sponsored by U.S. DOE Energy Research. DOE Contract FG05-87ER40343. Order Number DE92004061. Source: OSTI; NTIS; INIS; GPO Dep.

The double isovector giant state has been observed in the (π^-, π^+) $\Delta T_z = +2$ double-charge-exchange reaction on ^{13}C, ^{27}Al, ^{40}Ca, ^{56}Fe, ^{59}Co, and ^{93}Nb. The resonances observed in the (π^-, π^+) reaction are closely related via Coulomb displacement energy and isospin symmetry to the resonances measured in the inverse (π^+, π^-) reaction on the same nuclei. The new observations provide a direct determination of the upper isospin component of the double giant dipole state, which is generally very weak in the (π^+, π^-) reaction. The comparison between the double dipole in the two double-charge-exchange modes gives valuable information on the isospin splitting and the Pauli-blocking effects for isotensor transitions.

This report discusses the following topics: Complete Level Scheme for ^{30}P; A Search for Resonances Suitable for Tests of Detailed-Balance Violation; The Fourier Transform as a Tool for Detecting Chaos; Entrance Channel Correlations in p + ^{27}Al; The Parity Dependence of Level Densities in ^{49}V; and A Computer Program for the Calculation of Angular Momentum Coupling.

8060 (DOE/ER/40403–T3) **Experimental studies of pion-nucleus interactions at intermediate energies: Annual progress report.** New Mexico State Univ., Las Cruces, NM (United States). 31 Dec 1991. 34p. Sponsored by U.S. DOE Energy Research. DOE Contract FG04-88ER40403. Order Number DE92004819. Source: OSTI; NTIS; INIS; GPO Dep.

This report summarizes the work on experimental research in intermediate energy nuclear physics carried out at New Mexico State University in 1991 under a great from the US Department of Energy. Most of these studies have involved investigations of various pion-nucleus interactions. The work has been carried out both with the LAMPF accelerator at the Los Alamos National Laboratory and with the cyclotron at the Paul Scherrer Institute (PSI) near Zurich, Switzerland. Part of the experimental work involves measurements of new data on double-charge-exchange scattering, using facilities at LAMPF which we helped modify, and on pion absorption, using a new detector system at PSI that covers nearly the full solid-angle region which we helped construct. Other work involved preparation for future experiments using polarized nuclear targets and a new high-resolution spectrometer system for detecting π^0 mesons. We also presented several proposals for works to be done in future years, involving studies related to pi-mesonic atoms, fundamental pion-nucleon interactions, studies of the difference between charged and neutral pion interactions with the nucleon, studies of the isospin structure of pion-nucleus interactions, and pion scattering from polarized ^{3}He targets. This work is aimed at improving our understanding of the pion-nucleon interaction, of the pion-nucleus interaction mechanism, and of nuclear structure.

8061 (DOE/ER/40410–3) **[Electromagnetic studies of nuclear structure and reactions]: Progress summary, [January 1, 1991–December 31, 1991].** New Hampshire Univ., Durham, NH (United States). The past year has seen continued progress in our efforts. On the experimental side, we completed data acquisition on our major remaining involvement at NIKHEF, the ^{12}C(e,e′pp) experiment. We advanced the analysis of most of projects in low lying nuclear structure and giant resonances, of which several were completed and published. We received approval for several new experiments, and have made major contributions to design and development of detectors to be used at Bates and CEBAF. Our data interpretation efforts have been extended and enhanced with the availability of our new computer cluster. In this paper we briefly report on most of these efforts.

8062 (DOE/ER/40415–7) **Medium energy nuclear physics research: Progress report, July 1, 1987–September 30, 1988.** Peterson, G.A.; Dubach, J.F.; Hicks, R.S.; Miskimen, R.A. Massachusetts Univ., Amherst, MA (United States). Sep 1988. 46p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-88ER40415. Order Number DE92005084. Source: OSTI; NTIS; INIS; GPO Dep.

The UMass group has concentrated on using electromagnetic probes, particularly the electron in high-energy scattering experiments at the Stanford Liner Accelerator Center (SLAC). Plans are also being made for high energy work at the Continuous Beam Accelerator Facility (CEBAF). The properties of this accelerator should permit a whole new class of coincidence experiments to be carried out. At SLAC UMass has made major contributions toward the plans for a cluster-jet gas target and detector system at the 16 GeV PEP storage ring. For the future CEBAF accelerator, tests were made of the feasibility of operating wire drift chambers in the vicinity of a continuous electron beam at the University Illinois microtron. At the same time a program of studies of the nuclear structure of more complex nuclei has been continued at the MIT-Bates Linear Accelerator Center and in Amsterdam at the NIKHEF-K laboratory. At the MIT-Bates Accelerator, because of an unforeseen change in beam scheduling as a result of problems with the T_{20} experiment, the UMass group was able to complete data acquisition on experiments involving 180° elastic magnetic scattering on ^{117}Sn and ^{41}Ca. A considerable effort has been given to preparations for a future experiment at Bates involving the high-resolution threshold electrodisintegration of the deuteron. The use of these chambers should permit a high degree of discrimination against background events in the measurement of the almost neutrino-like small cross sections that are expected. In Amsterdam at the NIKHEF-K facility, single arm (e,e′) measurements were made in November of 1987 on ^{10}B in order to better determine the $p_{3/2}$ wave function from the transition from the $J^{pi} = 3^+$ ground state to the O^+ excited state at 1.74 MeV. In 1988, (e,e′p) coincidence measurements on ^{10}B were completed. The objective was to obtain information on the $p_{3/2}$ wave function by another means.

8063 (DOE/ER/40454–T1) **Partial-wave analyses of hadron scattering below 2 GeV: Progress report May 1991–Aprll 30, 1992.** Arndt, R.A.; Roper, L.D. Virginia Polytechnic Inst. and State Univ., Blacksburg, VA (United States). Dept. of Physics. [1991]. 5p. Sponsored by U.S. DOE Energy Research. DOE Contract FG05-88ER40454. Order Number DE92005468. Source: OSTI; NTIS; INIS; GPO Dep.

The Center for Analysis of Particle Scattering (CAPS) in the Department of Physics at Virginia Polytechnic Institute and State University has analyzed basic two-body hadron reactions below 2 GeV for the last two decades. Reactions studied were nucleon-nucleon, pion-nucleon, K^+-nucleon and pion photoproduction systems. In addition to analyses of these systems, a computer graphics system (SAID) has been developed and disseminated to over 250 research institutions using VAX computers. The computer-interactive system for disseminating information on basic scattering reactions is also accessible to the physics community through TELNET on the VPI&SU physics department VAX. 6 refs.

8064 (DOE/ER/40561–27) **High energy nuclear quasielastic reactions: Decisive tests of nuclear binding/pion models of the EMC effect.** Frankfurt, L. (Washington Univ., Seattle, WA (United States). Inst. for Nuclear Theory); Strikman, M.; Miller, G.A. Washington Univ., Seattle, WA (United States). Inst. for Nuclear Theory. [1991]. 12p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-90ER40561 ;FG06-88ER40427. (DOE/ER/40427-25-N91). Order Number DE92004382. Source: OSTI; NTIS; INIS; GPO Dep.

The light-cone nucleon momentum distributions obtained from non- relativistic spectral functions or given by nuclear binding/pion models are often used to analyze high Q^2 quasi-elastic and deep-inelastic (e,e′) reactions. We demonstrate that in such models the presence of non-nucleonic components causes the scattering from forward and backward moving target protons to be significantly different. Other models do not have this property. The sensitivity of current (e,e′p) and (p,pp) color transparency experiments is sufficient to observe these differences.

8065 (FNAL/C–91/325) **Preliminary results from FNAL E665 muon scattering at low x_{Bj}.** Schellman, H. E665 Collaboration. Fermi National Accelerator Lab., Batavia, IL (United States). Nov 1991. 3p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH03000. (CONF-9107172–10: 15. joint international lepton photon symposium at high energies and European Physical Society (EPS) conference on high energy, Geneva (Switzerland), 25 Jul - 1 aug 1991). Order Number DE92005332. Source: OSTI; NTIS; INIS; GPO Dep.

We present measurements of inelastic muon scattering cross section ratios at very low x_{Bj}. The Xe/D_2 cross section ratio has been measured for x_{Bj} down to 2×10^3. We have also measured the n/p cross section ratio down to $x_{Bj} = 10^3$ and see no significant deviation from unity. 8 refs., 4 figs.

8066 (IAEA-R–5234-F) **Neutron induced gamma-ray production data: Final report for the period 1 October 1988 - 31 October 1991.** Ho Yukun. International Atomic Energy Agency, Vienna (Austria). Nov 1991. 10p. Order Number DE92615322. Source: OSTI; NTIS (US Sales Only); INIS.

The capture reaction mechanisms are classified according to the hierarchy of quasiparticle numbers in the capture configurations - one quasiparticle (channel capture), three quasiparticles (doorway mechanism) and five or more quasiparticles (statistical processes). The nonstatistical effects in the 2 P and 3 S size resonance region of neutron strength function were systematically studied and the mass, shell and even-odd effects were explored. Two computer codes, GRS and GNASH-M, were developed and used for the calculations of neutron-induced photon production data in ^{12}C, ^{16}O, ^{27}Al, ^{28}Si, ^{56}Fe, $^{63-65}$Cu, ^{197}Au and ^{208}Pb at the neutron energy region from thermal to 20 MeV. 12 refs.

8067 (IC–91/130) **(^{6}Li,d) reaction on sd-, fp- and g-shell nuclei in ZR- and FR-DWBA formalisms.** Rahman, M.A. (International Centre for Theoretical Physics, Trieste (Italy)); Mecking, M.; Strohbusch, U. International Centre for Theoretical Physics, Trieste (Italy). Jun 1991. 10p. Order Number DE92614353. Source: OSTI; NTIS (US Sales Only); INIS.

(^{6}Li,d) reaction angular distributions on target nuclei $16 \leq A \leq 90$ have been analyzed using both ZR- and FR-DWBA formalisms. The most prevalent method of analysis of alpha-transfer reactions such as(^{6}Li,d) and its reverse (d, ^{6}Li) (where the wave function at zero distance in the p-state of relative cluster motion in the A = 6 nuclei will not have node) is the ZR-DWBA calculations due to the relatively short time of computation. It is of particular interest to verify whether FR-DWBA calculations result in similar S_α- values to those of ZR-DWBA or not. It is found that to derive similar S_α-values as in FR-DWBA calculations, one requires relatively large real well depth in ZR-DWBA calculations. Qualitative discussions have been made in this direction. (author). 12 refs, 3 figs, 2 tabs.

8068 (IC–91/166) **Strong absorption model analysis of alpha scattering.** Rahman, M.A. (International Centre for Theoretical Physics, Trieste (Italy)); Chandra Paul, S.; Sen Gupta, H.M.; Rahman, M. International Centre for Theoretical Physics, Trieste (Italy). Jul 1991. 16p. Order Number DE92614345. Source: OSTI; NTIS (US Sales Only); INIS.

Angular distribution of alpha-particles at several energies, $E_\alpha = 21 \approx 85.6$ MeV from a number of nuclei between ^{20}Ni and ^{119}Sn, extending to wide angular range up to ≈ 160 deg. C in some cases, have been analyzed in terms of three-parameter strong absorption model of Frahn and Venter. Interaction radius and surface diffuseness are obtained from the parameter values rendering the best fit to the elastic scattering data. The inelastic scattering of alpha-particles from a number of nuclei, leading to quadrupole and octupole excitations has also been studied giving the deformation parameters β_L. (author). 14 refs, 7 figs, 3 tabs.

8069 (INDC(AUS)–014/L) **Update of the evaluation of the cross sections for the neutron-dosimetry reactions ^{19}F(n,2n)^{18}F and ^{93}Nb(n,2n)^{92m}Nb.** Wagner, M. (Vienna Univ. (Austria). Inst. fuer Radiumforschung und Kernphysik). International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Oct 1991. 32p. Order Number DE92615323. Source: OSTI; NTIS (US Sales Only); INIS.

The excitation functions for the reactions ^{19}F(n,2n)^{18}F and ^{93}Nb(n,2n)^{92m}Nb, which are included in the International Reactor Dosimetry File (IRDF-90), were re-evaluated taking into account very recent experimental data. In the case of the reaction ^{19}F(n,2n)^{18}F the new measurements served to extend the neutron energy range beyond 20 MeV; for the ^{93}Nb(n,2n)^{92m}Nb reaction the new information concerning the energy region just above the threshold (9.0 - 10.6 MeV) substantially modified the results of the evaluation and thus the recommended cross sections in this energy region. The cross sections and their uncertainties were evaluated in energy groups with widths of 0.2 MeV to 2.0 MeV, and relative correlation matrices of the evaluated cross sections at the different energies were calculated. The results of the evaluation are compared with those given in the IRDF-90 and, in the case of ^{93}Nb(n,2n)^{92m}Nb, with a model calculation carried out by Strohmaier. The results of this work are intended to replace the corresponding data given in Physics Data 13-5 and the recommended cross sections for these two reactions in the IRDF-90. (author). 23 refs, figs and tabs.

8070 (INDC(BZL)–034/L) **Extension of the ^{232}Th burnup chain in the WIMSD/4 program library.** Caldeira, A.D. (Minsitry of Aeronautics (Brazil). Inst. of Advanced Studies). International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Oct 1991. 8p. Translated by the IAEA. Order Number DE92615324. Source: OSTI; NTIS (US Sales Only); INIS.

In the WIMSD/4 program library the ^{232}Th burnup chain ends at ^{234}U. The purpose of the present work is to extend the chain to ^{236}U by modifying the ^{234}U burnup data in the program library. 3 refs, 3 figs.

8071 (INDC(CCP)–316/L) **Evaluated neutron nuclear data for curium-244.** Klepatskij, A.B. (AN Belorusskoj SSR, Minsk (Belarus). Inst. Yadernoj Ehnergetiki); Kolesov, A.M.; Maslov, V.M.; Porodzinskij, Yu.V.; Sukhovitskij, E.Sh. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Oct 1991. 29p. Order Number DE92615325. Source: OSTI; NTIS (US Sales Only); INIS.

The creation of an evaluated neutron data file for ^{244}Cm is described. Currently available information on the interaction of neutrons with the ^{244}Cm nucleus is analysed. Owing to a lack of experimental data the evaluation relies to a large extent on the use of theoretical models and systematics. The evaluated cross-sections obtained in the 10^{-5} eV - 20 MeV region are compared with evaluations made by other authors. (author). 35 refs, 4 figs, 5 tabs.

8072 (INDC(CCP)–341/LP) **The gross and fine structure of the mass distributions of the fragments in the binary fission of actinides.** Goverdovsky, A.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk (USSR). Fiziko-Ehnergeticheskij Inst.); Mitrofanov, V.F.; Khryachkov, V.A. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Nov 1991. 18p. Order Number DE92615385. Source: OSTI; NTIS (US Sales Only); INIS.

The fission fragments energies and masses characteristics and their correlations have been studied for the fast neutrons induced fission of U-235,236,238. Np-237 and Am-243 (En=16.5 MeV) and cold-hot fragmentation of U-235 (thermal neutrons and 1 MeV), U-236 (1 MeV). New results for reaction Np-237 (n,f) with neutrons from 0.3 to 1.3 MeV (near the barrier top) are presented. 14 refs, 17 figs, 2 tabs.

8073 (INDC(CCP)–342/L) **The spectra of neutrons from the n+^{209}Bi reaction at 14 MeV.** Devkin, B.V.; Zhuravlev, B.V.; Kobozev, M.G.; Lunev, V.P.; Lychagin, A.A.; Simakov, S.P.; Talalaev, V.A.; Titarenko, N.N. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Nov 1991. 10p. Translation of a paper published in Yadernye Konstanty (Nuclear Constants 2, 1989) - Original report in Russian was distributed as INDC(CCP)-303/G. Translated by the IAEA. Order Number DE92615326. Source: OSTI; NTIS (US Sales Only); INIS.

Experimental data and theoretical interpretation of the spectra of secondary neutrons generated after the interaction of 14 MeV neutrons with ^{209}Bi are presented. 21 refs, 3 figs, 1 tab.

8074 (INDC(CPR)–023/L) **Evaluation of neutron nuclear data of Np-237 for CENDL-2.** Tang Guoyou (Beijing Univ., BJ (China). Inst. of Heavy Ion Physics); Fan Jihong; Cao Wentian; Bao Shanglian; Cai Chonghai. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Oct 1991. 11p. Order Number DE92615327. Source: OSTI; NTIS (US Sales Only); INIS.

The measured data for the (n,f) and (n,gamma) reactions for Np-237 have been evaluated in the energy region from 30 KeV to 20 MeV. All the data of Np-237 for other reaction channels were theoretically calculated. The total cross section, absorption cross section and elastic angular distribution were calculated using the parameters obtained from Optical Model. All data were calculated using general computer code FUP1 (the parameters of the Optical model used as input data to FUP1). The recommended experimental data and the theoretically calculated data were adjusted and let $\sigma_{tot}=\sigma_{el}+\sigma_{non}$. The resonance parameters in the energy range below 30 KeV were also added. All the data in the energy range 10^{-5} eV to 20 MeV were recommended as the data file of Np-237 for CENDL-2. (author). 38 refs, 5 figs, 3 tabs.

8075 (INDC(CPR)–024/L) **Evaluation of cross-sections for dosimetry reactions: Final report to the IAEA for the contract 5516, 1989-1991.** Cai Dunjiu (Chinese Nuclear Data Center, Beijing, BJ (China)). International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Oct 1991. 67p. Order Number DE92615328. Source: OSTI; NTIS (US Sales Only); INIS.

The document summarizes the results of a two-year contract work which was initiated by the IAEA with the Chinese Nuclear Data Centre (CNDC). Cross sections for 15 dosimetry reactions have been evaluated using original systematics and codes developed at the CNDC, some of their own experimental data and the latest experimental data from other sources. The document contains 16 independent papers and a separate abstract was prepared for each of these papers. Refs, figs and tabs.

8076 (INDC(CPR)–024/L, pp. 7-11) **The evaluation of ^{23}Na(n,γ)^{24}Na reaction cross section.** Yuan Hanrong (Academia Sinica, Beijing, BJ (China). Inst. of Atomic Energy). International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Oct 1991. In *Evaluation of cross-sections for dosimetry reactions: Final report to the IAEA for the contract 5516, 1989-1991.* 67p. Order Number DE92615328. Source: OSTI; NTIS (US Sales Only); INIS.

An evaluation of neutron capture cross section of ^{23}Na is performed based on ENDF/B-VI file. 51 refs, 2 figs, 3 tabs.

8077 (INDC(CPR)–024/L, pp. 12-13) **Evaluation of capture cross section for ^{45}Sc.** Zhao Zhixiang (Chinese Nuclear Data Center, Beijing, BJ (China)). International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Oct 1991. In *Evaluation of cross-sections for dosimetry reactions: Final report to the IAEA for the contract 5516, 1989-1991.* 67p. Order Number DE92615328. Source: OSTI; NTIS (US Sales Only); INIS.

The neutron capture cross section of ^{45}Sc was evaluated based on evaluated resonance parameters, smooth cross sections and systematics of the excitation function for (n,γ) reaction. 13 refs, 1 fig., 1 tab.

8078 (INDC(CPR)–024/L, pp. 14-16) **Evaluation of ^{46}Ti(n,p) ^{46}Sc reaction cross section.** Yu Baosheng (Academia Sinica, Beijing, BJ (China). Inst. of Atomic Energy); Cai Dunjiu; Lu Hanlin; Zhao Wenrong. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Oct 1991. In *Evaluation of cross-sections for dosimetry reactions: Final report to the IAEA for the contract 5516, 1989-1991.* 67p. Order Number DE92615328. Source: OSTI; NTIS (US Sales Only); INIS.

A reevaluation of the cross section of the reaction ^{46}Ti(n,p) ^{46}Sc is performed based on recent accurate experimental data above 14 MeV. 18 refs, 1 fig., 2 tabs.

8079 (INDC(CPR)–024/L, pp. 16-18) **Evaluation of the ^{N}Ti(n,x) ^{46}Sc reaction cross section.** Yu Baosheng (Academia Sinica, Beijing, BJ (China). Inst. of Atomic Energy); Cai Dunjiu; Lu Hanlin; Zhao Wenrong. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Oct 1991. In *Evaluation of cross-sections for dosimetry reactions: Final report to the IAEA for the contract 5516, 1989-1991.* 67p. Order Number DE92615328. Source: OSTI; NTIS (US Sales Only); INIS.

In the present evaluation, the cross sections of ^{N}Ti(n,x) ^{46}Sc reaction represent the ^{46}Ti(n,p) cross section plus an additional component produced from ^{47}Ti(n,np) and ^{47}Ti(n,d) reactions. 15 refs, 1 fig., 2 tabs.

8080 (INDC(CPR)–024/L, pp. 19-23) **Evaluation of the ^{48}Ti(n,p) ^{48}Sc reaction cross section.** Yu Baosheng (Academia Sinica, Beijing, BJ (China). Inst. of Atomic Energy); Cai Dunjiu; Lu Hanlin; Zhao Wenrong. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Oct 1991. In *Evaluation of cross-sections for dosimetry reactions: Final report to the IAEA for the contract 5516, 1989-1991.* 67p. Order Number DE92615328. Source: OSTI; NTIS (US Sales Only); INIS.

The reevaluation of the ^{48}Ti(n,p) ^{48}Sc reaction cross section is performed based on 34 experimental data sets corresponding to 131 experimental points in neutron energy range 5-19 MeV. 41 refs, 2 figs, 3 tabs.

8081 (INDC(CPR)–024/L, pp. 24-28) **Evaluation of the ^{55}Mn(n,2n) ^{54}Mn reaction cross section.** Lu Hanlin (Academia Sinica, Beijing, BJ (China). Inst. of Atomic Energy); Zhao Wenrong; Yu Weixiang; Cai Dunjiu; Wang Zisheng; Huang Xiaolong. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Oct 1991. In *Evaluation of cross-sections for dosimetry reactions: Final report to the IAEA for the contract 5516, 1989-1991.* 67p. Order Number DE92615328. Source: OSTI; NTIS (US Sales Only); INIS.

The cross section of the reaction ^{55}Mn(n,2n) ^{54}Mn for neutron energies between 10 and 20 MeV was evaluated based on data compiled from literature. A set of recommended cross sections values are given with 0.1 MeV or 0.2 MeV energy steps from 10.5 MeV to 20 MeV. The estimated accuracy is about 2%-15%. 26 refs, 2 figs, 3 tabs.

8082 (INDC(CPR)–024/L, pp. 29-33) **Evaluation of the ^{54}Fe(n,α) ^{51}Cr reaction cross section.** Lu Hanlin (Academia Sinica, Beijing, BJ (China). Inst. of Atomic Energy); Zhao Wenrong; Yu Weixiang; Cai Dunjiu; Wang Zisheng; Huang Xiaolong. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Oct 1991. In *Evaluation of cross-sections for dosimetry reactions: Final report to the IAEA for the contract 5516, 1989-1991.* 67p. Order Number DE92615328. Source: OSTI; NTIS (US Sales Only); INIS.

The excitation curve for the reaction ^{56}Fe(n,α) ^{51}Cr has been evaluated based on seventeen experimental data sets. The recommended cross sections are given with 0.1, 0.2 or 0.5 MeV energy steps from 4.0 to 20.0 MeV. The estimated accuracy is 30% near threshold, 4-6% below 14 MeV, 2.6% between 14-15 MeV, 3-4% above 15 MeV and 10% up to 20 MeV. 19 refs, 2 figs, 3 tabs.

8083 (INDC(CPR)–024/L, pp. 34-36) **Evaluation of ^{58}Fe(n,γ) ^{59}Fe reaction cross sections and its covariance.** Zhao Zhixiang (Chinese Nuclear Data Center, Beijing, BJ (China)); Liu Tong. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Oct 1991. In *Evaluation of cross-sections for dosimetry reactions: Final report to the IAEA for the contract 5516, 1989-1991.* 67p. Order Number DE92615328. Source: OSTI; NTIS (US Sales Only); INIS.

The evaluations for ^{58}Fe(n,γ) ^{59}Fe reaction cross sections and its covariance data are completed and compared with ENDF/B-V. (author). 24 refs, 1 fig., 3 tabs.

8084 (INDC(CPR)–024/L, pp. 37-38) **The evaluation of ^{59}Co(n,γ)^{60}Co reaction cross section and its covariance data.** Liu Tong (Chinese Nuclear Data Center, Beijing, BJ (China)); Zhou Delin. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Oct 1991. In *Evaluation of cross-sections for dosimetry reactions: Final report to the IAEA for the contract 5516, 1989-1991.* 67p. Order Number DE92615328. Source: OSTI; NTIS (US Sales Only); INIS.

The cross section of the reaction ^{59}Co(n,γ)^{60}Co has been evaluated based on the data from the ENDF/B-V file. 6 refs, 1 fig., 2 tabs.

8085 (INDC(CPR)–024/L, pp. 39-47) **Evaluation of the Co^{59}(n,2n)Co^{58,58m} reaction cross section.** Cai Dunjiu (Academia Sinica, Beijing, BJ (China). Inst. of Atomic Energy); Wang Zisheng; Yu Baosheng; Lu Hanlin; Zhao Wenrong. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Oct 1991. In *Evaluation of cross-sections for dosimetry reactions: Final report to the IAEA for the contract 5516, 1989-1991.* 67p. Order Number DE92615328. Source: OSTI; NTIS (US Sales Only); INIS.

The cross section of the reaction ^{59}Co(n,2n)$^{58.58m}$Co at 14.7 MeV and for neutron energies from threshold to 25 MeV has been evaluated based on recent experimental data. 41 refs, 3 figs, 5 tabs.

8086 (INDC(CPR)–024/L, pp. 48-50) **Evaluation of ^{59}Co(n,α)^{56}Mn reaction.** Zhao Wenrong (Academia Sinica, Beijing, BJ (China). Inst. of Atomic Energy); Lu Hanlin; Yu Weixiang; Cai Dunjiu; Wang Zisheng; Huang Xiaolong. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Oct 1991. In *Evaluation of cross-sections for dosimetry reactions: Final report to the IAEA for the contract 5516, 1989-1991.* 67p. Order Number DE92615328. Source: OSTI; NTIS (US Sales Only); INIS.

The cross section of the reaction ^{59}Co(n,α)^{56}Mn at 14.7 MeV and for neutron energies between 5.0 and 21.0 MeV with a step of 0.2 MeV has been evaluated using recent experimental data. 25 refs, 2 figs, 3 tabs.

8087 (INDC(CPR)–024/L, pp. 51-53) **Evaluation of ^{109}Ag(n,γ)^{110m}Ag reaction cross sections and their covariance data.** Zhao Zhixiang (Chinese Nuclear Data Center, Beijing, BJ (China)). International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Oct 1991. In *Evaluation of cross-sections for dosimetry reactions: Final report to the IAEA for the contract 5516, 1989-1991.* 67p. Order Number DE92615328. Source: OSTI; NTIS (US Sales Only); INIS.

The isomer capture cross sections of ^{109}Ag and their covariance data were evaluated in the energy range from 1.0 E^{-5} eV to 20 MeV based on experimental information including the measured data of total capture cross section, systematics and theoretical calculation. 14 refs, 3 figs, 1 tab.

8088 (INDC(CPR)–024/L, pp. 54-59) **Evaluation of the ^{115}In(n,n') ^{115m}In reaction cross section.** Cai Dunjiu (Academia Sinica, Beijing, BJ (China). Inst. of Atomic Energy); Yu Baosheng; Lu Hanlin; Zhao Wenrong. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Oct 1991. In *Evaluation of cross-sections for dosimetry reactions: Final report to the IAEA for the contract 5516, 1989-1991.* 67p. Order Number DE92615328. Source: OSTI; NTIS (US Sales Only); INIS.

The cross section of the reaction ^{115}In(n,n') ^{115m}In from threshold (0.399 MeV) to 20 MeV was reevaluated based on recent experimental information. 38 refs, 1 fig., 4 tabs.

8089 (INDC(CPR)–024/L, pp. 60-63) **Evaluation of the ^{115}In(n,2n)^{114m}In reaction cross-section.** Lu Hanlin (Academia Sinica, Beijing, BJ (China). Inst. of Atomic Energy); Zhao Wenrong. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Oct 1991. In *Evaluation of cross-sections for dosimetry reactions: Final report to the IAEA for the contract 5516, 1989-1991.* 67p. Order Number DE92615328. Source: OSTI; NTIS (US Sales Only); INIS.

The cross section of the reaction ^{115}n(n,2n) ^{114m}In at 14.7 MeV and from threshold to 20 MeV has been evaluated based on recent published experimental data. 28 refs, 2 figs, 3 tabs.

8090 (INDC(CPR)–024/L, pp. 64-67) **The evaluation of ^{127}I(n,2n)^{126}I reaction.** Zhao Wenrong (Academia Sinica, Beijing, BJ (China). Inst. of Atomic Energy); Lu Hanlin; Yu Weixiang; Cai Dunjiu; Wang Zisheng; Huang Xiaolong. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Oct 1991. In *Evaluation of cross-sections for dosimetry reactions: Final report to the IAEA for the contract 5516, 1989-1991.* 67p. Order Number DE92615328. Source: OSTI; NTIS (US Sales Only); INIS.

The cross section of the reaction ^{127}I(n,2n) ^{126}I at 14.7 MeV and for neutron energies from threshold to 20 MeV has been evaluated based on recent experimental data. 16 refs, 1 fig., 4 tabs.

8091 (INDC(HUN)–030/L) **Processing of evaluated neutron data files in ENDF format on personal computers.** Vertes, P. (Hungarian Academy of Sciences, Budapest (Hungary). Central Research Inst. for Physics). International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Nov 1991. 13p. Order Number DE92615344. Source: OSTI; NTIS (US Sales Only); INIS.

A computer code package - FDMXPC - has been developed for processing evaluated data files in ENDF format. The earlier version of this package is supplemented with modules performing calculations using Reich-Moore and Adler-Adler resonance parameters. The processing of evaluated neutron data files by personal computers requires special programming considerations outlined in this report. The scope of the FDMXPC program system is demonstrated by means of numerical examples. (author). 5 refs, 4 figs, 4 tabs.

Includes summary in Dutch.

The main aim of this work is the construction of a first-order optical potential for the scattering of pions by ^{3}He at low energy with as few approximations as possible. In particular the Fermi motion is treated extremely carefully by using microscopic ^{3}He wave functions and by performing the complete Fermi-integral. Differential cross-sections and analyzing powers have been calculated. In a detailed comparison between the first-order optical with one which results from using the semi-factored approximation, it became clear that the latter has the following shortcomings: 1. the dependence of the subenergy on the pion-nucleus scattering angle, and 2. the independence of this energy on the relative motion of the spectator nucleons. (author). 101 refs.; 15 figs.; 3 tabs.

8109 (JINR-R–7-90-112) **On the detection of spontaneous fission of nuclei implanted into a Si(Au) surface-barrier detector.** Tsyganov, Yu.S.; Rim Yun Sen. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Reactions. 1990. 6p. (In Russian). Order Number DE92609913. Source: OSTI; NTIS (US Sales Only); INIS.

Spontaneous fission of nuclei implanted into a silicon surface-barrier detector has been investigated. A single parameter model of electron-hole plasma has been designed. The value of this parameter may be determined through an independent experiment. A systematics for first approximations of the total kinetic energy has been suggested. The result of calculations have been compared with the available data on the decay of ^{252} 102 nuclei. 10 refs.; 4 figs.

8110 (Juel–2449) **Compton scattering on hadronic systems.** Baron, N.C. Forschungszentrum Juelich GmbH (Germany). Inst. fuer Kernphysik. Feb 1991. 180p. (In German). Order Number DE92758895. Source: OSTI; NTIS (US Sales Only); INIS.

Compton scattering with real photons is studied for several hadronic systems, where special care is taken of the internal structure of the systems. The scattering on the deuteron is treated in terms of an analytically solvable model in the low energy region as in illustration for the general theory of low energy Compton scattering. For the ^{208}Pb target nucleus a consistent treatment of the retardation leads to an interpretation of scattering data below and above the giant resonances up to energies of 50 MeV. Compton scattering in the Δ-resonance region is studied for the nucleon. The internal structure is described via a constituent quark model resulting in a proper treatment of the polarizabilities of the nucleon. The effect of binding on the polarizabilities is discussed on the basis of kinematical effects and modifictions due to the retardation. (orig.).

8111 (Juel–2477) **Hadronic spin excitations in finite fermion systems.** Unkelbach, W. Forschungszentrum Juelich GmbH (Germany). Inst. fuer Kernphysik; Bonn Univ. (Germany). May 1991. 152p. (In German). Order Number DE92758896. Source: OSTI; NTIS (US Sales Only); INIS.

Hadronic spin-excitations in finite Fermi systems are investigated by studying inelastic proton- and antiproton-nucleus scattering in doubly magic nuclei (^{12}C, 4^{0}Ca, ^{48}Ca, ^{208}Pb). The Random-Phase-Approximation (RPA) and the Distorted-Wave-Born-Approximation

(DWBA) are used to describe the nuclear structure and reaction respectively. The possibility of a low-energy octupole resonance (LEOR) in ^{208}Pb, which exhausts a significant fraction of the energy weighted sum rule, is investigated. It is found that the sum-rule fraction of $\propto$ 15% seen in (p,p') reactions depends sensitively on the strength of the isovector projectile-target nucleus interaction. To study spin-excitations in (p,p')-reactions, the double differential cross section and the spin-flip probability S_{yy} are calculated for forward angles. They are in good agreement with experiments on ^{40}Ca, ^{48}Ca and ^{208}Pb at intermediate incident energies (200 MeV - 800 MeV). The experimentally observed spin-dipole resonance in ^{40}Ca can be reproduced. S_{yy} depends sensitively on the distorions of the projectile wave. Different versions of the Nanti N-potential of the Bonn-Juelich group have been used to calculate (anti p,anti p') cross sections on ^{12}C. They show large sensitivity for unnatural parity states. Because of the strong absorption, this reaction is an excellent probe for the long-range one-pion exchange. (orig.).

Heavy fragment productions from light compound nucleus (A < 60) induced by low energy heavy-ion reaction are analyzed in terms of Extended Hauser Feshbach (EHF) method. This EHF method should be considered to attempt for treating light-particle emission and heavy fragment production in the equivalent statistical way. The mass-, charge- and kinetic energy- distributions of ^{35}Cl + ^{12}C reaction (E_{Lab} = 180,200 MeV) and ^{32}S + ^{24}Mg reaction (E_{Lab} = 142 MeV) are extensively investigated as the typical examples. First of all, it is shown that the variations in observed cross section from fragment to fragment are completely coincide with the variation of binding energy of the lighter fragments. Therefore the nascent fragment from the compound nucleus around the scission point are expected to have the almost same properties of the individual nucleus. Because the variation of the binding energy are understood as the shell correction energy, the temperature dependent level density parameter a(T) evaluated by the use of the observed shell structure energy is applied to the level density of the heavier part of fragment and also the nuclei of evaporation residues. The calculated phase space of light-particle emission are improved, then the observed yields of the heavy fragments of both ^{35}Cl + ^{12}C and ^{32}S + ^{24}Mg are well reproduced by the same parameter set in EHF calculation. The calculated kinetic energy distribution are transformed in the standard way to the distribution in the laboratory system and shown to reproduce well the measured kinetic energy distribution. Therefore the observed heavy fragment production are understood as the statistical binary decay from the compound nucleus induced by heavy-ion reaction. (author).

As for the nuclear reaction cross sections with neutrons, in the energy range below 20 MeV, there are many measured data, and the theoretical calculation based on the experimental data has been carried out, consequently, the evaluated data files, ENDF/B-5, JENDL-3 and so on, have been provided. However in the energy range exceeding 20 MeV, there scarcely is monochromatic neutron field in the world, accordingly the experimental data scarcely exist. Recently for the research on the damage of fusion reactor materials and others, the data on the radioactivation cross sections of 15-50 MeV have become necessary, and with the wide utilization of accelerators, the induced radioactivity of equipment has become a problem. However, the experimental data for higher than 20 MeV are still very few at present. In this paper, the outline of the radioactivation cross sections measured by using the quasi-monochromatic neutron beam by Be-9 (p,n) reaction is reported. As for the method of measurement, proton beam was extracted from a cyclotron, and irradiated on the Be targets. The generated monochromatic neutrons were measured with a scintillator. (K.I.).

8116 (LA–12209-T) **Pion double charge exchange above the Δ3/2,3/2 resonance.** Williams, A.L. Los Alamos National Lab., NM (United States). Nov 1991. 104p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-36. Order Number DE92003621. Source: OSTI; NTIS; INIS; GPO Dep.

Thesis submitted to University of Texas at Austin.

The first exclusive measurements of $(\pi^+\pi^-)$ reactions on several nuclei for incident pion energies from 300 to 550 MeV are reported. The measurements were made with the Large Acceptance Spectrometer at the P^3 channel of the Clinton P. Anderson Meson Physics Facility. A description of the experimental setup is given which includes a discussion of modifications to the spectrometer and channel implemented specifically for these measurements. Forward angle excitation functions for transitions to the double isobaric analog state (DIAS) are found to be relatively flat for these energies. This energy dependence is reproduced by optical and Glauber calculations, but not by a six-quark bag prediction. The mass dependence of the DIAS was found to qualitatively agree with the predicted mass dependence from optical calculations. One angular distribution was measured for $5° \leq \Theta_{lab} \leq 35°$ for $^{18}O(\pi^+\pi^-)^{18}Ne$. The DIAS cross section falls by more than one order of magnitude over this range, as predicted by both Glauber and optical model calculations. Data for $f_{7/2}$-shell nuclei were examined with a two-amplitude model based on seniority-zero shell model wavefunctions which features expressions for cross sections for DIAS transitions and transitions to nonanalog ground-states. The cross sections for T = 1 nuclei are found to be inconsistent with the predictions of the model. One excitation function for nonanalog transitions was measured and is relatively flat with energy. The continuum of nonanalog states near threshold was found to decrease with energy.

8117 (RCNP-P–114) **Proceedings of study meeting on microscopic and phenomenological research of interaction for light heavy-ion systems.** Osaka Univ., Ibaraki (Japan). Research Center for Nuclear Physics. Jun 1991. 146p. Order Number DE92751063. Source: OSTI; NTIS (US Sales Only); INIS.

The Research Center for Nuclear Physics study meeting 'Microscopic and phenomenological research of interaction for light heavy-ion systems was held on March 7-9, 1990 as the study meeting in the second half of 1990, and 25 researchers took part in it. As the background of holding this study meeting, the fact that recently the rainbow scattering due to nuclear force was discovered experimentally in ^{16}O-^{16}O system, and phenomenologically it was explained only by deep inter-nucleus potential. This should be evaluated as an important foothold for the research on the interaction for light heavy-ion systems and nuclear reaction mechanism. Accordingly, most of the papers presented this time were those related to the inter-nucleus potential and nuclear reaction mechanism. Also the development of theoretical analysis method was carried out and reported. Further, recently the experimental study on the structure and reaction of the neutron rich nucleus has advanced, and the theoretical research related to this topic was reported. (K.I.).

8118 (IC–91/129) **The (^{3}He, ^{7}Be) reaction on light and medium mass nuclei.** Rahman, M.A. (International Centre for Theoretical Physics, Trieste (Italy)); Lezoch, P.; Trost, H.J.; Strohbusch, U. International Centre for Theoretical Physics, Trieste (Italy). Jun 1991. 26p. Order Number DE92609934. Source: OSTI; NTIS (US Sales Only); INIS.

(^{3}He, ^{7}Be) reaction have been measured and re-analysed on some A = 4n target nuclei between ^{12}C and ^{90}Zr. An exact finite-range DWBA calculations, with spin-orbit term in the optical potentials, have been carried out assuming a single-step alpha-cluster transfer. The question of the observed characteristic difference between two ^{7}Be-states has been discussed in some detail. It is apparent that, despite the deficiencies in the details of the quality of the description to the angular distribution, the spin-orbit term represents the major reason for the characteristic difference between the two ^{7}Be-states. Both absolute and relative alpha-spectroscopic factors are deduced. It is concluded that staying in the same potential family, variations of S_α between ^{12}C and ^{40}Ca are but moderate with possible existence for local variations, S_α being lower in the middle of the sd shell and higher for ^{40}Ca. At relatively higher beam energy, i.e., at 70 MeV in the present case and with increasing mass number, S_α-values, in general decrease, implying a decrease in surface alpha-clustering for heavier nuclei. (author). 30 refs, 11 figs, 3 tabs.

8119 (JINR-E–2-90-20) **Glauber theory of high-energy p-He scattering with composite nucleons.** Omboo, Z.; Bayarsaykhan, Ch.; Ganbold, O.; Tseren, Ch. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems. 1990. 8p. Order Number DE92609745. Source: OSTI; NTIS (US Sales Only); INIS.

The differential cross sections of pa elastic scattering at high energies are calculated in the framework of the multiple scattering theory. By taking explicity into account the composite structure of hadrons and the effects of quark exchange some discrepancies between the theory and the data that were recently pointed out were eliminated. 10 refs.; 1 fig.; 1 tab.

8120 (JINR-R–1-90-149) **Observation of the Coulomb interaction effect in pion pairs from the reaction $p+Ta\rightarrow\pi^++\pi^-+X$ at proton energy 70 GeV.** Afanas'ev, L.G. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems); Karpukhin, V.V.; Gorchakov, O.E. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems. 1990. 28p. (In Russian). Order Number DE92609956. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Yad. Fiz.

Pion pair production from the reaction $p+Ta\rightarrow\pi^++\pi^-+X$ at proton energy 70 GeV has been studied. Pions in the 0.8-2.4 GeV/c momentum range have been detected at an angle of 8.4^0 to the proton beam, in acceptance angle of 3.8 sr. Pion pair correlations as a function of the relative momentum q in a $\pi^+\pi^-$-pair C.M.S. have been measured at the unstudied before region of $q<40$ MeV/c. The correlation function is observed sharply increasing at q reduction smaller than 10 MeV/c. The experimental data agree with the calculation that takes into account the Coulomb factor in the differential cross section of pion pairs production. 28 refs.; 11 figs.

8121 (JINR-R–1-90-198) **Estimation of the EMC-effect value in the deuteron.** Lednicky, R.; Peshekhonov, D.V.; Smirnov, G.I. Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy. 1990. 6p. (In Russian). Order Number DE92609733. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Yad. Fiz.

An analysis of μ, ν and ν-bar scattering on hydrogen and deuterium targets within the framework of the quark-parton model have been performed. The results indicate that the distortion of the structure functions of free neutrons and protons in the deuterium nucleus is small. 10 refs.; 1 fig.; 1 tab.

8122 (CONF-920308–2) **A nodal integral method for neutron diffusion in hexagonal geometry.** Azmy, Y.Y. Oak Ridge National Lab., TN (United States). [1991]. 10p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From Advances in reactor physics; Charleston, SC (United States); 8-11 Mar 1992. Order Number DE91015925. Source: OSTI; NTIS; GPO Dep.

We derive a new nodal method for the neutron diffusion equation using the Nodal Integral Method (NIM) formalism. The new approach is based on a coordinate transformation, reminiscent of that used in boundary fitted coordinates methods, to transform a general parallelogram into a rectangle. The transformed equation in this case contains a mixed derivative, in addition to the standard diffusion operator. We then apply the NIM formalism to the transformed equation and derive the discrete-variable balance equation and current continuity conditions. Finally, we transform the resulting expressions back into the original coordinate system, and manipulate them to obtain a single balance equation for the entire hexagon. 5 refs., 2 figs.

8123 (DOE/OR/00033–T462) **Labor market trends for health physicists.** Oak Ridge Associated Universities, Inc., TN (United States). Nov 1991. 18p. Sponsored by U.S. DOE Energy Research; Nuclear Regulatory Commission. DOE Contract AC05-76OR00033. Order Number DE92004770. Source: OSTI; NTIS; GPO Dep.

Information is presented on the recent trends in enrollments, degrees and US civilian, non-medical employment for health physicists. This information is combined with other data such as salary comparisons, indicators of hiring difficulties by the federal government, and information received from employers to assess the current labor market status for health physicists. This information indicates that for the last several years demands for new graduate health physicists have been greater than supplies. An assessment of projected enrollment and degree trends and employment trends through the mid-1990s is presented. This assessment indicates that the current labor market situation is not likely to change – the number of job openings will continue to exceed the number of new graduates available for employment. Moreover, information is presented which indicates that there are several factors at work in the general economy which will make is difficult to enhance health physics enrollments and degrees. Thus, while the recent increase in enrollments in health physics programs and the addition of two new programs in 1990 is encouraging, these are not enough to meet future employment needs. Employers will, in all likelihood, continue to have difficulties in hiring health physicists, and salaries will continue to be relatively high through the mid-1990s. 16 refs., 8 figs.

8128 (Juel–2435) **The preparation of computer-supported methods for the analysis of radiation situation at particle accelerators and their exemplary application to the cooler synchrotron COSY.** Moll, J. Forschungszentrum Juelich GmbH (Germany). Inst. fuer Kernphysik; Wuppertal Univ. (Gesamthochschule) (Germany). Jan 1991. 108p. (In German). Order Number DE92758892. Source: OSTI; NTIS (US Sales Only); INIS.

In this thesis the applicability of modern particle transport programs for the radiation protection of the new cooler synchrotron COSY has been investigated. Monte Carlo codes as the program system HERMES offer a large flexibility in geometry simulation and a wide spread applicability up to the GeV energy region because of its implemented physical models. These codes are very suitable for detailed analysis of radiation sources within the accelerator and for dose rate estimations behind radiation shields. Detailed calculations of double differentional flux spectra and surface dose rate distributions at a cylindrical standard target for different materials (iron, copper and lead) were done for 2.5GeV protons incident. In case of deep penetration problems it turns out, that the CPU-time requirement of the Monte Carlo codes increases rapidely. Therefore the Monte Carlo codes were coupled with a one-dimentional S_n transport code to treat deep penetration problems in a reasonable computer CPU-time. For this purpose a new high energy neutron-γ transport library was evaluated taking into account the upper energy limit of COSY with 2.8GeV. The needed cross sections have been calculated by using the physical models of one of the HERMES-codes. Several Fortran-routines were developed to get an automatically procedure, which is used to evaluate the results and determine Legendre polynominals of order P3, which had to be inserted as coefficients into the library. The coupling procedure between the programs has been automated by means of several Fortran-routines, which does transformation, normalisation and formatting of the flux-data. (orig./HST).

8129 (KAPL–4731) **A variable timestep generalized Runge-Kutta method for the numerical integration of the space-time diffusion equations.** Aviles, B.N.; Sutton, T.M.; Kelly, D.J. III. Knolls Atomic Power Lab., Schenectady, NY (United States). Sep 1991. 15p. Sponsored by U.S. DOE Nuclear Energy. DOE Contract AC12-76SN00052. (CONF-920308–4: Advances in reactor physics, Charleston, SC (United States), 8-11 Mar 1992). Order Number DE92003010. Source: OSTI; NTIS; INIS; GPO Dep.

A generalized Runge-Kutta method has been employed in the numerical integration of the stiff space-time diffusion equations. The method is fourth-order accurate, using an embedded third-order solution to arrive at an estimate of the truncation error for automatic timestep control. The efficiency of the Runge-Kutta method is enhanced by a block-factorization technique that exploits the sparse structure of the matrix system resulting from the space and energy discretized form of the time-dependent neutron diffusion equations. Preliminary numerical evaluation using a one-dimensional finite difference code shows the sparse matrix implementation of the generalized Runge-Kutta method to be highly accurate and efficient when compared to an optimized iterative theta method. 12 refs., 5 figs., 4 tabs.

In *Proceedings of the eleventh meeting of the international collaboration on advanced neutron sources (ICANS-XI).* 654p. Order Number DE92713960. Source: OSTI; NTIS (US Sales Only); INIS.

This paper describes (i) benchmark experiments of intermediate energy neutron transmission through iron, lead and graphite shields and (ii) estimation of thick target neutron yield by high energy ^{4}He ions. In the neutron transmission experiments, a collimated beam of neutrons induced by 65-MeV protons in a thick Cu target was utilized in the measurements. Monte Carlo calculations by MORSE were carried out with the DLC-87 Hilo multigroup cross sections. It was found that the DLC-87 data reproduced the measured data well for the graphite shield, but gave partly higher values for the iron shield, and overpredicted the lead transmitted spectra. Neutron yields for stopping-length target of Cu and Be were estimated for ^{4}He ion bombardment with the intranuclear cascade evaporation Monte Carlo code, HETC/KFA-1. The results were obtained for ion energies from 100 MeV/u to 800 MeV/u. The neutron spectra were fitted to simple evaporation spectra and the systematics on the nuclear temperature was studied. Total neutron yield per incident ^{4}He ion was about 5 times larger than that per proton. (author).

8131 (KURRI-TR–345, pp. 16-34) **Calculation method for nuclear fission neutron spectra.** Ohsawa, Takaaki (Kinki Univ., Higashi-Osaka, Osaka (Japan). Atomic Energy Research Inst.). Kyoto Univ., Kumatori, Osaka (Japan). Research Reactor Inst. Mar 1991. (In Japanese). (CONF-9008225–: Specialists' meeting on physics and engineering of fission and spallation; Specialists' meeting on physics and engineering of fission and spallation, Kumatori (Japan); Kumatori (Japan), 2 Aug 1990; 10 jan 1991; CONF-9101117–). In *Proceedings of the specialists' meeting on physics and engineering of fission and spallation, 1990.* 118p. Order Number DE92713857. Source: OSTI; NTIS (US Sales Only); INIS.

Though nuclear fission neutron spectra have the long history of research, still those are not resolved sufficiently. The first of the reason is that most of the measurement carried out so far were for the neutron fission of U-235 and the spontaneous nuclear fission of Cf-252, and for other nuclides, the reliable data lack. Second, even on U-235 (n,f) and Cf-252 (sf) having many data, the accuracy has not yet satisfied the requirement. Third, theoretically the mechanism of releasing fission neutrons is the cascade release from many fragments having various exciting energy, and the simple modeling is not easy. As seen from the application side, in relation to the research on the heightening of fuel burnup and the annihilation processing of actinides, the prompt neutron spectrum data for a variety of nuclides and wide incident energy become necessary. In this report, the conventional phenomenalism approach and the recent trend of the theoretical studies are described, and the Madland-Nix model which has been adopted recently for JENDL-3 and ENDF/B-4 is taken up, and its examination and the results of the attempt to improve the problems are described. (K.I.).

8132 (KURRI-TR–345, pp. 35-41) **Amount of forming neutrons by light and heavy ion reaction and permeation of produced neutrons through substances.** Hata, Kazuo (Kyoto Univ. (Japan). Recently accelerators have become to be used for the purposes of wide range, as the result, the demand has become strong for the data on the shielding of the generation of radiation, radioactivation and radiation permeation. Generally when the shield for accelerators is considered, the generation of neutrons from a target and the permeation of those neutrons through substances are the fundamental matters. In this report, the generation of neutrons from targets by light ions and heavy ions having relatively low energy is described. Moreover, the permeation of the neutrons generated by the protons of several tens MeV through typical substances is shown. The amount of secondary neutron generation from thick targets by light ions increased as the incident ions and the target nuclei became heavier. The energy dependence was similar. However, the amount of neutron generation by heavy ions of 10 MeV/u was almost constant, regardless of incident ions and target nuclei. In the measurement, to the thick targets of C, Al, Cu, Pb and so on, p (30 MeV), p (52 MeV), d (33 MeV), alpha (65 MeV), He-3 (65 MeV) and C-12 (120 MeV) were applied, and the angle and energy distribution of the generated neutrons were measured. (K.I.).

8133 (ORNL/TM–11873) **DRC2: A code with specialized applications for coupling localized Monte Carlo adjoint calculations with fluences from two-dimensional R-Z discrete ordinates air-over-ground calculations.** Slater, C.O. Oak Ridge National Lab., TN (United States). Jan 1992. 76p. Sponsored by Defense Nuclear Agency. DOE Contract AC05-84OR21400. Order Number DE92005175. Source: OSTI; NTIS; GPO Dep.

The DRC2 code, which couples MASH or MASHX adjoint leakages with DORT 2-D discrete ordinates forward directional fluences, is described. The forward fluences are allowed to vary both axially and radially over the coupling surface, as opposed to the strictly axial variation allowed by the predecessor DRC code. Input instructions are presented along with descriptions and results from several sample problems. Results from the sample problems are used to compare DRC2 with DRC, DRC2 with DORT, and DRC2 with itself for the case of x-y dependence versus no x-y dependence of the forward fluence. The test problems demonstrate that for small systems DRC and DRC2 give essentially the same results. Some significant differences are noted for larger systems. Additionally, DRC2 results with no x-y dependence of the forward directional fluences are practically the same as those calculated by DRC.

The spectral, angular, polarized emittance (SAPE) is a simple means for observing the allowed electromagnetic energy states associated with periodic structures whose dimensions are comparable to the wavelength of the observed light. Other methods for measuring absorption are far more time consuming when a broad survey is of interest. An extensive body of SAPE data was obtained on 350– 400°C intrinsic silicon lamellar gratings. Current approximations to the vector wave equation such as guided wave, modal and Bloch wave methods provided insight into our experiments. A qualitative picture of the stationary electromagnetic states (SES) of lamellar gratings has been developed which agrees with experiment for a number of polarizations, and angular orientations of the emission k vector relative to the gratings. However, one type of emission does not fit any simple model we have examined and raises intriguing questions about emission from grating structures. A new, higher angular resolution emissometer (0.8° instead of 5°)

has been completed. This system significantly increases the wavelength range from the current 3–14 μm range to 2-25μm, a doubling of the spectral regime. The system is currently in a "shakedown" mode. Preliminary data indicates that the new emissometer meets the design goals. 24 refs., 10 figs.

The DOE-sponsored project in this laboratory has two facets. The first is the development of methods of nonlinear Raman spectroscopy for application in studies of sparse samples. The second is the application of such methods to structural and dynamical studies of species in supersonic molecular beams. The progress we have made in both of these areas is described in this paper. The report is divided into five remaining sections. The first pertains to theoretical and experimental developments in Fourier transform stimulated emission spectroscopy and Fourier transform hole-burning spectroscopy. The second deals with progress in the development of ionization-detected stimulated Raman spectroscopies (IDSRS). The third describes results from the application of IDSRS methods to studies of jet-cooled benzene clusters. The fourth describes IDSRS results from studies of hydrogen-bonded complexes containing phenols. The fifth relates to studies of carbazole-$(Ar)_n$ clusters.

An analysis based on a numerical integration of the equation which governs the total growth rate of the electron density due to the combined effect of multiphoton ionization and electron cascade ionization processes is presented. The calculations are carried out for argon and xenon gases in the pressure range $1.0\text{-}5\text{x}10^3$ Torr illuminated with 10ps pulses of 1.06μm laser radiation. This analysis shows that the two ionization processes (multiphoton and electron cascade) play an important role over the whole pressure regime considered. At low pressures ($<$ 300 Torr) the breakdown is governed solely by the multiphoton process, indicated by the weak dependence of the threshold intensity on the gas pressure. At higher pressures ($<$ 760 Torr) however, a strong pressure dependence of the threshold intensity is observed. This is considered as evidence for the domination of the cascade ionization process at these pressures. On the pressure range 200-760 Torr a slight decrease of the threshold intensity is observed for both gases. This is attributed to the minor role played by the cascade ionization process together with the multiphoton ionization process at these pressures. The calculated thresholds for argon and xenon are consistent with those experimentally measured. (author). 15 refs, 4 figs.

Our research program is devoted to understanding the dynamics of elementary ionic collisions at the level of the underlying potential surface by measuring energy and angular distributions of reactively scattered products with crossed beam methods over the relative center-of-mass energy range from 0.3 to several eV. We have performed reactive and non-reactive scattering studies on the proton and hydrogen atom transfer systems listed below: $O + NH_3 \rightarrow OH + NH_2$ $\delta H = -0.2$ eV $O + H_2O \rightarrow OH + OH$ $\delta H = +0.4$ eV. In both of these systems, the reactions are hypothesized to occur on potential energy surfaces having two minima. The first minimum corresponds to the formation of an electrostatically bound complex, e.g., $O(H_2O)$, followed by an intramolecular hydrogen atom/proton transfer to yield OH·OH, which may then form the products by cleavage of the complex.

The collision rates that are used in RELFLAP, the relativistic fluid code for high-power microwave propagation through the atmosphere, are obtained from the first three moments of the relativistic Boltzmann collision integral. Expressions for the particle, momentum, and energy transfer rates caused by elastic, inelastic, and ionizing collisions were previously obtained by evaluating the moments of the relativistic Boltzmann collision integrals using a relativistic momentum distribution function and assuming scattering cross sections that are independent of the scattering angle. The resulting integral expressions are evaluated numerically over a two-dimensional grid of mean kinetic and thermal velocity in the code RELFCOL. The purpose of this memorandum is to document the calculation of new relativistic collision rates using angular dependent scattering cross sections. This new calculation is based on a similar nonrelativistic treatment given by Roussel-Dupre and on the earlier relativistic rate calculation. The earlier calculation was based on the incorrect assumption that the collision rates were proportional to the normalized mean electron momentum. This assumption yields unnaturally large collision rates for the extreme relativistic case. In fact, the rates for collisions between electrons and stationary neutral particles are proportional to the mean electron velocity. The new rate calculation is based on this fact. New derivations of the Boltzmann collision integrals, similar to the original derivations, are presented. Relativistic scattering cross sections are discussed. Expressions for the particle, momentum, and energy transfer rates were derived using differential scattering cross sections. Some of the computational methods used to calculate the collision rate and the results of the rate calculation are discussed.

This work was performed as part of the research program of the 'Stichting voor Fundamenteel Onderzoek der Materie FOM' (Foundation for Fundamental Research into Matter), with financial support from the 'Nederlandse Organisatie voor Wetenschappelijk Onderzoek WNO' (Netherlands Organization for Scientific Research); Includes summary in Dutch.

This thesis describes an experimental study into the electron-impact excitation to the 3^3P, 3^1D and 3^3D states of Helium. The scattered electron and the photon, emitted by the excited atom, are measured in coincidence. The parameters, which can be varied, are the scattering angle and the kinetic energy of the projectile. Two parameters, which are used to characterize the excited state, are the angular momentum transferred to the atom, L perpendicular, and the alignment angle γ. It is shown that results of measurements on 3^1D excitation with photon detection perpendicular to the scattering plane do not agree in the small scattering angle region with any of the model calculations currently available. Remarkable is the sign of L perpendicular, which appears to start of negatively at 60 eV. It is shown that for 3^3P excitation the predicted large value of γ is indeed found experimentally. This supports the suggestion that exchange scattering is underestimated in model calculations for ^1P excitation. Another result is that for ^1P and ^3P excitation the behaviour of L perpendicular as a function of the scattering angle can be related at different impact energies with the help of a partial wave expansion. A scaling relation can be formulated for the behaviour of L perpendicular. The influence of a negative ion resonance to excitation of the 3^3D state is investigated. Both in coincidence and non-coincidence measurements the presence of the resonance yields information on both the direct and indirect excitation of the 3^3D state. It is shown that the coincident measurement gives an unique opportunity to determine the excited 3^3D state completely. Results of measurements with photon detection in the scattering plane are given. They supplement previous 3^1D and 3^3D results and allow physical parameters, such as L perpendicular and γ, to be obtained. (H.W.). 132 refs.; 20 figs.; 18 tabs.

8149 (LA-UR–91-3849) **Dielectronic recombination theory.** LaGattuta, K.J. Los Alamos National Lab., NM (United States). [1991]. 12p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-36. (CONF-9110313–1: NATO workshop on recombination of atomic ions, Belfast (Ireland), 6-9 Oct 1991). Order Number DE92005020. Source: OSTI; NTIS; INIS; GPO Dep.

A theory now in wide use for the calculation of dielectronic recombination cross sections (σ^{DR}) and rate coefficients (α^{DR}) was one introduced originally by Feshbach for nuclear physics applications, and then later adapted for atomic scattering problems by Hahn. In the following, we briefly review this theory in a very general form, which allows one to account for the effects of overlapping and interacting resonances, as well as continuum-continuum coupling. An extension of our notation will then also allow for the inclusion of the effects of direct radiative recombination, along with a treatment of the interference between radiative and dielectronic recombination. Other approaches to the calculation of σ^{DR} have been described by Fano and by Seaton. We will not consider those theories here. Calculations of α^{DR} have progressed considerably over the last 25 years, since the early work of Burgess. Advances in the reliability of theoretical predictions have also been promoted recently b a variety of direct laboratory measurements of σ^{DR}. While the measurements of σ^{DR} for $\delta n \neq 0$ excitations have tended to agree very well with calculations, the case of $\delta n = 0$ has been much problematic. However, by invoking a mechanism originally proposed by Jacobs, which takes into account the effect of stray electric fields on high Rydberg states (HRS) participating in the DR process, new calculations have improved the agreement between theory and experiment for these cases. Nevertheless, certain discrepancies still remain.

Mathematisch-Naturwissenschaftliche Fakultaet. Jun 1991. 35p. (In German). Order Number DE92758859. Source: OSTI; NTIS (US Sales Only); INIS.

It was the aim of this thesis to show means and ways, in order to regard Coulomb correlation already on the SCF level. As mean to facilitate this general averaged fields should serve. For this first in chapter I was shown, how by means of suitable gauge fixings terms into effective potentials of the Hartree-Fock or g-Hartree type are introduced, which permit an interpretation as correlation density or as effective coupling constant. The following considerations were exemplarily performed on the cases g-Hartree (in Coulomb gauge) and on f-Hartree-Fock. (orig./HSI).

8151 (CONF-920124–4) **Suppression and shifting of odd-photon resonant excitations and stimulated hyper-Raman emissions.** Garrett, W.R.; Payne, M.G. Oak Ridge National Lab., TN (United States). [1991]. 11p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From Society of Photo-Optical Instrumentation Engineers' international symposium on laser spectroscopy as part of SPIE's symposium on optics, electro-optics and laser applications in science and engineering; Los Angeles, CA (United States); 19-24 Jan 1992 Order Number DE92005116. Source: OSTI; NTIS; GPO Dep.

When a principal atomic transition (dipole allowed from the ground state) is driven by odd-multi-photon excitation or by stimulated hyper-Raman scattering, a nonlinear multi-wave mixing field is generated at the transition frequency. A number of dramatic effects on such odd-photon mediated processes can ensue as a result of the internally generated wave-mixing fields. Excellent agreement between theory and experimental studies in Xe and in metal vapors is illustrated for a number of predicted effects including: suppression and strong shifting of resonance lines and hyper-Raman emissions under single and multi-laser excitation. We illustrate the dependence of the interference-related effects on pressure, oscillator strength, wavelength combination and relative propagation directions of pump laser beams. Contrary to most other nonlinear effects, we show that none of the features (in the semi-classical regime) depends on the intensity of the driving laser field.

Source: OSTI; NTIS; INIS; GPO Dep.

The isotope shifts and the hyperfine structure constants of the I = 7 neutron-deficient ^{188,192}Tl isotopes were observed for the λ = 535 nm line of neutral thallium. An optical detection efficiency of 2 x 10^{-4} photons per radioactive ion was achieved with a large solid angle fiber optical array detector.

8153 (CONF-9108105-5) **Recombination of highly charged ions with free electrons.** Mueller, A. (Giessen Univ. (Germany)); Frank, A.; Haselbauer, J.; Hofmann, G.; Neumann, J.; Pracht, U.; Salzborn, E.; Schennach, S.; Spies, W.; Stenke, M.; Uwira, O.; Voelpel, R.; Wagner, M.; Becker, R.; Jennewein, E.; Kleinod, M.; Proebstel, U.; Phaneuf,.Oak Ridge National Lab., TN (United States). [1991]. 11p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From 8. topical conference on atomic processes in plasmas; Portland, ME (United States); 25-29 Aug 1991. Order Number DE92004228. Source: OSTI; NTIS; INIS; GPO Dep.

Recombination of highly charged ions and free electrons is studied in interacting-beams experiments. Beside direct recombination into bound states by radiative capture a variety of resonant recombination phenomena is observed. Resonant recombination produces a highly excited, usually short lived electron-ion compound which can stabilize by the emission of photons and/or electrons. Depending on this emission, the final charge state of the ion can be one less than the parent charge state, but it can also be higher and thus a net single or multiple ionization of the ion is observed after the initial recombination. 14 refs., 7 figs.

8154 (INIS-mf-13079) **A compact copper nuclear demagnetization cryostat and a search for superfluidity in solid ^{4}He.** Haar, P.G. van de. Rijksuniversiteit Leiden (Netherlands). 17 Oct 1991 158p. Order Number DE92614426. Source: OSTI; NTIS (US Sales Only); INIS.

Includes summary in Dutch.

The subject of this thesis is the theoretical and experimental study of matter at low temperatures, and the development of techniques to reach and measure these temperatures. A copper nuclear demagnetization cryostat was developed in order to reach low temperatures. This system distinguishes itself from other cryostats by its compact construction. The lowest temperature recorded by a pulsed Pt-NMR thermometer was 115 μK. This system was used to search for superfluidity in solid ^{4}He. Due to the large zero-point motion of the atoms, 4He remains liquid down to zero temperature; a pressure of 25.3 bar is needed to force the atoms in a lattice. Even in solid state, the ^{4}He atoms remain very mobile, changing lattice sites at a frequency of approximately 10^7 Hz. It is possible that solid ^{4}He contains vacancies at zero temperature. These zero point vacancies are expected to behave like a gas of bosons, and should Bose-condense at some temperature. From experiments the upper limit to the vacancy concentration is set of 4·10-5. (author). 217 refs.; 46 figs.; 2 tabs.

8155 (LAMP-91/3) **Single photon double ionization of helium.** LAMP series report (Laser, Atomic and Molecular Physics). Tiwary, S.N. International Centre for Theoretical Physics, Trieste (Italy). May 1991. 15p. Order Number DE92609186. Source: OSTI; NTIS (US Sales Only); INIS.

we have calculated the single photon double ionization cross section of helium using the fully correlated wave function for the ground state and partially correlated wave function for the final state. Our present theoretical investigation demonstrates that the inclusion of the full correlation in the initial as well as the final state wave function is indispensable in order to obtain reliable results in the close vicinity of the threshold. 8156 (CONF-911202-7) **Real-space multiple scattering theory method: Formalism and applications.** Zhang, X.G. Kentucky Univ., Lexington, KY (United States). Center for Computational Sciences. [1991]. 10p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From Annual fall meeting of the Materials Research Society; Boston, MA (United States); 2-6 Dec 1991. Order Number DE92004240. Source: OSTI; NTIS; GPO Dep.

Different forms of the real-space multiple scattering theory (RS-MST) formalism are compared in order to understand its convergence behavior with respect to truncation in the angular momentum expansions. In particular the so-called "folding method" or (1,n) mode is considered, in which the renormalized t-matrix T of the semi-infinite system has the dimension of n (n > 1) repeating units and the self-consistent equation for T is constructed by adding and contracting one such unit. It has been demonstrated in previous studies of layered structures that the folding method converges rapidly in both angular momentum (L) and site (n) indices and yields accurate results. The convergence behavior is an important factor to be considered in applying the various forms of the RS-MST method to layered structures as well as other systems with extended defects. 10 refs., 6 figs.

8157 (DOE/ER/14100-1) **Hydrodynamic instabilities and coherent structures: Progress report, January 1, 1991-December 31, 1991.** Frenkel, A. Alabama Univ., University, AL (United States). Dept. of Mathematics. Aug 1991. 5p. Sponsored by U.S. DOE Energy Research. DOE Contract FG05-90ER14100. Order Number DE92004077. Source: OSTI; NTIS; GPO Dep.

This report briefly discusses electrically conducting fluids, Kolmogorov flow, triangular-eddy flow, thin film flow, and core-annular flow. (LSP)

8158 (DOE/ER/25061-T1) **Initial-value problems and stability in shear flows.** Criminale, W.O. Washington Univ., Seattle, WA (United States). Dept. of Applied Mathematics. Oct 1991. 21p. Sponsored by U.S. DOE Energy Research. DOE Contract FG06-88ER25061. (TR-91-13). Order Number DE92004391. Source: OSTI; NTIS; GPO Dep.

It is the plan of this presentation of outline three major topics of the novel analysis. (1) Use of exact solutions in solving initial-value problems; (2) detailed linear example that illustrates the relevant of the early period and possible instability; (3) Lagrangian mechanics and the link to computational fluid dynamics.

This report discusses: surface states and resonances on Ta(011); surface states and phonon anomalies on Pt(111); and surfaces fermi contours and charge transfer.

8160 (DOE/ER/45437-1) **Surface and interfacial properties of polymer blends: Progress report, September 25, 1990-December 24, 1991.** Rafailovich, M.; Sokolov, J. Queens Coll., Flushing, NY (United States). Dept. of Physics. Nov 1991. 8p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-90ER45437. Order Number DE92004074. Source: OSTI; NTIS; GPO Dep.

This is a summary of the research we have conducted since receiving our DOE grant and research plans for the coming year. As you will notice most of the research objectives of our original proposal were met, especially in regard to measuring surface segregation and interface formation in polymer blends. Our program has therefore expanded into other directions such as the study of the surface visco-elastic properties of polymer liquids and solutions, the conformations of polymer chains grafted onto silica surfaces, and the dynamics of cross linked polymer networks.

8161 (IC–91/179) **Magneto-optical phenomena in semiconductor superlattices.** Nguyen Hong Shon. International Centre for Theoretical Physics, Trieste (Italy). Jul 1991. 10p. Order Number DE92615480. Source: OSTI; NTIS (US Sales Only); INIS.

The Faraday and birefringence effects due to infrared radiation in semiconductor superlattices under quantized magnetic field are investigated. It is shown that for non-degenerate electron gas in the one mini-band approximation the frequency behaviour of magneto-optical coefficients exhibit finite jumps at $\omega=\eta\omega_c\pm2\Delta$ (ω is the frequency of electromagnetic radiation, ω_c is the cyclotron frequency and Δ is half band width). The natural birefringence and dichroism in superlattices are also calculated. (author). 9 refs, 1 fig.

8162 (IC–91/191) **Instability of the paramagnetic state in the kinematic field approximation in the Hubbard model.** Gorvachev, E.G. International Centre for Theoretical Physics, Trieste (Italy). Jul 1991. 5p. Order Number DE92615481. Source: OSTI; NTIS (US Sales Only); INIS.

Within the scope of the approximation of a kinematic field I have been calculating the uniform paramagnetic susceptibility $\chi(0,0)=\delta R(H)/\delta H$ when $H \to 0$ and $U \to \infty$. It turns out that $\chi(0,0) < 0$ in the all region, where $R=0$ (i.e. $0,7 >$ or approx. $n \geq 0$). (author). 6 refs, 1 fig.

8163 (IC–91/224) **The odd Voigt effect under a strong electric field in semiconductors.** Nguyen Hong Shon. International Centre for Theoretical Physics, Trieste (Italy). Aug 1991. 10p. Order Number DE92615482. Source: OSTI; NTIS (US Sales Only); INIS.

The high frequency conductivity tensor $\sigma_{ik}(\omega)$ in the linear approximation of magnetic field H and in the quadratic approximation of external dc electric field is derived by solving Boltzmann equation. The magneto-optical phenomena in the Voigt configuration (when a probe electro-magnetic wave propagates across a magnetic field) are investigated. It is shown that the birefringence and dichroism have a component that is odd (linear) in the magnetic fields and predominate over the even effect in the weak magnetic field. (author). 8 refs.

8164 (IC–91/242) **The influence of contraction in the first interplane distance on the surface states of Ta(001).** Baquero, R. (International Centre for Theoretical Physics, Trieste (Italy)); Coss, R. de. International Centre for Theoretical Physics, Trieste (Italy). Aug 1991. 4p. Order Number DE92615483. Source: OSTI; NTIS (US Sales Only); INIS.

We analyze the influence that the recently found Ta(001) first interatomic layer contraction has on the surface electronic structure. We find that the states near the Fermi energy at the Γ point on the 2D First Brillouin zone found in recent experiments are directly related to this contraction. In general, our calculation shows a better agreement with experiment than previous work. The remaining small differences might be attributable to a possible smaller but non-negligible contraction of the second interatomic layer distance. (author). 8 refs, 1 fig.

8165 (IC–91/246) **A probabilistic mechanism hidden behind the universal power law for dielectric relaxation. 1 - General relaxation equation.** Weron, K. International Centre for Theoretical Physics, Trieste (Italy). Aug 1991. 24p. Order Number DE92615484. Source: OSTI; NTIS (US Sales Only); INIS.

A new model for the explanation of the universal dielectric response law is proposed. It differs significantly from all previous works on the subject. The presented model is based on the assumption that individual dipoles and their environment do not remain independent during the process of relaxation. Therefore, the time θ_i, needed for the regression to equilibrium of polarization fluctuations in a random variable which depends for each relaxing dipole on two other random variables: the waiting time η_i and the dissipation rate β_i. As a consequence we derive a general relaxation equation which gives the universal dielectric response in the power law form (as a special case the stretched exponential form is obtained). (author). 47 refs, 2 figs.

8166 (IC–91/247) **A probabilistic mechanism hidden behind the universal power law for dielectric relaxation. 2 - Discussion of the response function.** Weron, K. International Centre for Theoretical Physics, Trieste (Italy). Aug 1991. 19p. Order Number DE92615485. Source: OSTI; NTIS (US Sales Only); INIS.

This paper is a continuation of our previous work, where the new probabilistic model based directly on the reaction picture of relaxation was introduced and a general relaxation equation was derived. Here we show the universal character of distributions of damping rates and waiting times used in this model. Moreover, we discuss in detail a physical significance of the response function derived as a solution of the general relaxation equation. (author). 23 refs, 4 figs.

8167 (IC–91/276) **Optical properties of metallic multi-layer films.** Dimmich, R. International Centre for Theoretical Physics, Trieste (Italy). Sep 1991. 24p. Order Number DE92615486. Source: OSTI; NTIS (US Sales Only); INIS.

Optical properties of multi-layer films consisting of alternating layers of two different metals are studied on the basis of the Maxwell equations and the Boltzmann transport theory. The influence of free-electron scattering at the film external surface and at the interfaces is taken into account and considered as a function of the electromagnetic field frequency and the structure modulation wavelength. Derived formulas for optical coefficients are valid at low frequencies, where the skin effect is nearly classical, as well as in the near-infrared, visible and ultraviolet spectral ranges, where the skin effect has the anomalous nature. It is shown that the obtained results are apparently dependent on the values of the scattering parameters. What is more, the oscillatory nature of analyzed spectra is observed, where the two oscillation periods may appear on certain conditions. The oscillations result from the electron surface and interface scattering and their amplitudes and periods depend on the boundary conditions for free-electron scattering. Finally, the application of the interference phenomenon in dielectric layers is proposed to obtain the enhancement of the non distinct details which can appear in optical spectra of metallic films. (author). 31 refs, 6 figs.

8168 (IC–91/283) **Carrier-influenced bistable behaviour in ring cavity configuration.** Nguyen Ba An (International Centre for Theoretical Physics, Trieste (Italy)); Nguyen Trung Dan; Hoang Xuan Nguyen. International Centre for Theoretical Physics, Trieste (Italy). Aug 1991. 15p. Order Number DE92615487. Source: OSTI; NTIS (US Sales Only); INIS.

Bistable output-input light characteristics in the exciton spectral region have been examined in a ring cavity configuration taking into account the influence of the presence of free carriers in the cavity as well as of the density-dependence of the exciton damping. The resulting modifications could serve as a means to optimize the optical bistable device operation. (author). 18 refs, 3 figs.

8169 (IC–91/286) **Phase transition in IV-VI compound semiconductors at high pressures.** Gupta, D.C. (International Centre for Theoretical Physics, Trieste (Italy)); Singh, R.K. International Centre for Theoretical Physics, Trieste (Italy). Sep 1991. 17p. Order Number DE92614534. Source: OSTI; NTIS (US Sales Only); INIS.

The high pressure phase transitions, the equation of state and associated volume collapses of IV - VI compound semiconductors have been analysed by means of a three-body potential (TBP) model approach. The charge-transfer effects, arising from the overlapping or deformation of the electron shells of the adjacent ions leading to the many-body (three-body) interactions, are included explicitly in the crystal potential. The TBP model explains successfully the large Cauchy-discrepancy in these IV-VI semiconductors. The agreement between the present theoretical and available experimental values on the phase transition pressures (P_t = 196, 148, 108 and 226 kbar), cohesive energy and lattice parameters are in reasonably good agreement in almost all the materials under consideration. The charge-transfer effect shows an appreciable influence on the phase transition properties of these materials. (author). 23 refs, 4 figs, 3 tabs.

8170 (IS-T–1584) **Theoretical study of hydrogen in α-YH_x and on Si(111) surface.** Min, B.J. Ames Lab., IA (United States). 20 Dec 1991. 97p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-82. Order Number DE92005096. Source: OSTI; NTIS; INIS; GPO Dep.

Thesis submitted to Iowa State University.

A first principles total energy calculation is performed to study hydrogen in an hcp metal, Y, under a Born-Oppenheimer approximation between Y and H. The equilibrium interstitial location, heat of formation, the change in the lattice constants and the bulk moduli, and the vibration frequencies of hydrogen are in excellent agreement with the experiment. However, the Born-Oppenheimer approximation is unable to make a quantitative prediction about the energy level splitting and hydrogen energy barrier between the interstitial sites. It would be out of reach to address these problems via a first principles technique. With this in mind, an empirical tight binding model is constructed for the simpler Si:H system and applied in a molecular dynamics simulation to study the hydrogen vibration on Si(111) surface. Our empirical tight binding model is able to provide an efficient and yet accurate description of hydrogen vibrations in the SiH_4 molecule and on the Si(111) surface. The frequency shift of the hydrogen stretching mode with temperature is investigated. The coupling between the hydrogen wagging mode and the Si substrate mode is verified. Also we have observed that there is a strong coupling between the hydrogen stretching mode and the wagging mode. It is hoped that this model would find greater use as computational capacity continues to grow rapidly.

8171 (LA-UR–91-4097) **Vibrational spectroscopy in high temperature dense fluids.** Moore, D.S.; Schmidt, S.C. Los Alamos National Lab., NM (United States). [1992]. 8p. Sponsored by U.S. DOE Office of Administration and Human Resource Management. DOE Contract W-7405-ENG-36. (CONF-920124–3: Society of Photo-Optical Instrumentation Engineers' international symposium on laser spectroscopy as part of SPIE's symposium on optics, electro-optics and laser applications in science and engineering, Los Angeles, CA (United States), 19 Order Number DE92005052. Source: OSTI; NTIS; GPO Dep.

Coherent anti-Stokes Raman spectroscopy (CARS) in conjunction with a two-stage light-gas gun has been used to obtain vibrational spectra of shock-compressed liquid N_2, O_2, CO, and their mixtures, as well as liquid N_2O. The experimental spectra are compared to spectra calculated using a semiclassical model for CARS intensities to obtain vibrational frequencies, peak Raman susceptibilities, and linewidths. The derived spectroscopic parameters suggest thermal equilibrium of the vibrational populations is established in less than a few nanoseconds after shock passage. Vibrational temperatures obtained are compared to those derived from equation-of-state calculations. The variation of the vibrational frequency shift at pressure with species concentration in mixtures is investigated.

8172 (UCRL-JC–10872) **Numerical simulation of accelerated interfaces.** Marcus, D.L. (Lawrence Livermore National Lab., CA (United States)); Bell, J.B.; Puckett, E.G.; Saltzman, J. Lawrence Livermore National Lab., CA (United States). 21 Oct 1991. 15p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-48. (CONF-9106222–10: Workshop on physics of compressible, turbulent mixing, Royaumont (France), 17-19 Jun 1991). Order Number DE92004670. Source: OSTI; NTIS; GPO Dep.

We describe two numerical methods that have been designed to model the dynamics of accelerated interfaces. One method is based on the numerical approximation of the incompressible, variable-density Navier-Stokes equations while the other is based on a numerical approximation of the Euler equations. One feature that these methods share is that the numerical approximation to the governing fluid flow equations is accomplished in part by means of a second order extension of Godunov's method. We present the results of computations to model Rayleigh-Taylor instability and Richtmyer-Meshkov instability. 22 refs., 11 figs.

8173 (UCRL-JC–107425) **Effects of preheat on mix in laser accelerated planar foils.** Molitoris, J.D. (Lawrence Livermore National Lab., CA (United States)); Phillion, D.W.; Morin, M.M.; Goldsack, T.J.; Rothman, S.D.; Hansom, J.C.V. Lawrence Livermore National Lab., CA (United States). [1991]. 9p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-9106222–11: Workshop on physics of compressible, turbulent mixing, Royaumont (France), 17-19 Jun 1991). Order Number DE92004667. Source: OSTI; NTIS; INIS; GPO Dep.

We have investigated the effect of x-ray preheat on the development of mix. In these experiments a planar foil package consisting of two materials separated by a smooth interface was ablatively accelerated using a laser produced x-ray drive source. In the normally preheated case the drive had a component which coupled to the interface, while in the low preheat case that component was absent. The measured mix widths and hydrodynamics are compared for both situations. 12 refs., 10 figs.

8174 (ECN-RX–91-059) **Positron-annihilation 2D-ACAR measurements in $Bi_2Sr_2CaCu_2O_{8+x}$: Contribution to Workshop on fermiology of high-T_c superconductors, Argonne, March 25-27, 1991.** Mijnarends, P.E. (Netherlands Energy Research Foundation, Petten (Netherlands)); Melis, A.F.J.; Weeber, A.W. Netherlands Energy Research Foundation, Petten (Netherlands). Jun 1991. 6p. (CONF-9103112–: Conference on fermiology of high T_c superconductors, Argonne, IL (United States), 25-27 Mar 1991). Order Number DE92614536. Source: OSTI; NTIS (US Sales Only); INIS.

To be published in Journal of physics and chemistry of solids.

The authors present a brief account of measurements of the two-dimensional angular correlation of annihilation radiation (2D-ACAR) in a single crystal of approximate composition $Bi_2Sr_2CaCu_2O_{8+x}$ (T_c 85 K) at 6 and 92 K. The most noteworthy result is that the anisotropic part of the spectra displays a fine-structure which is sharpest at the higher of these two temperatures. (author). 17 refs.; 1 fig.

8175 (IC–91/280) **Relaxation of local moments diluted in $CePd_3$-intermediate valence compound.** Venegas, P. (International Centre for Theoretical Physics, Trieste (Italy)); Barberis, G. International Centre for Theoretical Physics, Trieste (Italy). Sep 1991. 8p. Order Number DE92615488. Source: OSTI; NTIS (US Sales Only); INIS.

Anomalous thermal behaviour on EPR linewidths has been observed for Gd impurities diluted in $CePd_3$-intermediate valent compound. In this work we show that the exchange interaction between the local magnetic moments and the intermediate valence host ions has an important contribution to the relaxation rates of the local moments. The relaxation is calculated using the Red-field formalism and the ideas contained in the interconfigurational fluctuation model of Hirst. We show that the exchange interaction contribution has an exponential dependence on the excitation energy of the intermediate valent ions. (author). 22 refs, 1 fig.

8176 (IC–91/288) **Monte Carlo simulation of the three-state vector Potts model on a three-dimensional random lattice.** Jianbo Zhang (International Centre for Theoretical Physics, Trieste (Italy)); Heping Ying. International Centre for Theoretical Physics, Trieste (Italy). Sep 1991. 12p. Order Number DE92615489. Source: OSTI; NTIS (US Sales Only); INIS.

We have performed a numerical simulation of the three-state vector Potts model on a three-dimensional random lattice. The averages of energy density, magnetization, specific heat and susceptibility of the system in the N^3(N=8,10,12) lattices were calculated. The results show that a first order nature of the Z(3) symmetry breaking transition appears, as characterized by a thermal hysterisis in the energy density as well as an abrupt drop of magnetization being sharper and discontinuous with increasing of volume in the cross-over region. The results obtained on the random lattice were consistent with those obtained on the three-dimensional cubic lattice. (author). 12 refs, 4 figs.

8177 (KEK–90-25(v.1), pp. 156-161) **Photons and neutrons.** Shirane, Gen (Brookhaven National Lab., Upton, NY (United States)). National Lab. for High Energy Physics, Tsukuba, Ibaraki (Japan). Mar 1991. (CONF-9010243–: International collaboration on advanced neutron sources (ICANS), Tsukuba (Japan), 21-26 Oct 1990). In *Proceedings of the eleventh meeting of the international collaboration on advanced neutron sources (ICANS-XI).* 654p. Order Number DE92713960. Source: OSTI; NTIS (US Sales Only); INIS.

A review is given of two selected topics in current activities of synchrotron x-ray studies; magnetic x-ray scattering and inelastic x-ray scattering. These are the research areas where photons and neutrons directly compete and supplement each other. (author).

8178 (KEK–90-25(v.1), pp. 162-170) **Some thoughts on the future of neutron scattering.** Egelstaff, P.A. (Guelph Univ., ON (Canada). Dept. of Physics). National Lab. for High Energy Physics, Tsukuba, Ibaraki (Japan). Mar 1991. (CONF-9010243–: International collaboration on advanced neutron sources (ICANS), Tsukuba (Japan), 21-26 Oct 1990). In *Proceedings of the eleventh meeting of the international collaboration on advanced neutron sources (ICANS-XI).* 654p. Order Number DE92713960. Source: OSTI; NTIS (US Sales Only); INIS.

Attendance of ICANS meetings believe that neutron scattering has a bright future, but critics of neutron scattering argue that its practitioners are an aging group, that they use a few, very expensive neutron sources and that the interesting science may be done by other techniques. The ICANS committee asked me to comment on the future of neutron scattering in the light of this contrast. Some comments will be made on the age distribution, on the proper distribution of sources, on the convenient availability of neutron instruments and methods, on the expansion into new areas of science, on applications to industry and on the probable impact of synchrotron sources. It is hoped that these comments will lead to an outward looking discussion on the future. (author).

8179 (IC–91/277) **Nonequilibrium statistical operator in hot-electron transport theory.** Xing, D.Y.; Liu, M. International Centre for Theoretical Physics, Trieste (Italy). Sep 1991. 22p. Order Number DE92615517. Source: OSTI; NTIS (US Sales Only); INIS.

The Nonequilibrium Statistical Operator method developed by Zubarev is generalized and applied to the study of hot-electron transport in semiconductors. The steady-state balance equations for momentum and energy are derived to the lowest order in the electron-lattice coupling. We show that the derived balance equations are exactly the same as those obtained by Lei and Ting. This equivalence stems from the fact that to the linear order in the electron-lattice coupling, two statistical density matrices have identical effect when they are used to calculate the average value of a dynamical operator. The application to the steady-state and transient hot-electron transport in multivalley semiconductors is also discussed. (author). 28 refs, 1 fig.

We have studied the silicide formation in Fe-implanted Si(100), with 1×10^{17}–1×10^{18} Fe/cm^2, using extended x-ray absorption fine structure (EXAFS), x-ray diffraction and Rutherford backscattering spectrometry (RBS) methods. In the samples as-implanted at 350°C, no silicide was observed at doses below 3×10^{17} Fe/cm^2. At 5×10^{17}, both α-FeSi$_2$ and β-FeSi$_2$ form but α-FeSi$_2$ appears to be the majority phase. As the dose increases to 7×10^{17} and above, ordered FeSi forms, but implantation damage is severe and a large number of Fe atoms are in very disordered environments. In addition to FeSi, Fe$_5$Si$_3$ was also observed in the 1×10^{18} Fe/cm^2 sample. Upon post-implantation annealing at 700°C or 900°C, single phase β-FeSi$_2$ was obtained independent of the dosage. 17 refs., 4 figs.

Brookhaven National Lab., Upton, NY (United States). [1991]. 13p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH00016. (CONF-910903–12: International conference on magnetism, Edinburgh (United Kingdom), 1-7 Sep 1991). Order Number DE92005003. Source: OSTI; NTIS; INIS; GPO Dep.

The magnetic properties of EuAs$_3$ have been investigated by X-ray magnetic scattering with synchrotron radiation. No magnetic scattering could be detected in EuAs$_3$ when the energy of X-rays was far away from the L absorption edges. Strong enhancement of magnetic intensities have been observed at the L$_{II}$ and L$_{III}$ absorption edges whereas no magnetic intensities could be detected at the L$_I$ absorption edge. The resonance enhancement at the L$_{III}$ absorption edge is stronger by a factor of about three compared to that the L$_{II}$ absorption edge. The magnetic properties of EuAs$_3$ determined previously by neutron scattering could be reproduced by resonance X-ray scattering.

Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH00016. (CONF-911277–1: Solid state physics symposium, Bombay (India), 21-24 Dec 1991). Order Number DE92005010. Source: OSTI; NTIS; GPO Dep.

X-ray and neutron scattering studies of surfaces and interfaces have become increasingly popular over that last few year due to the recent developments in both scattering techniques and high intensity sources, particularly synchrotron x-ray sources. Although detailed characterization of any interface requires understanding of scattering both at small angles and in the (wide angle) Bragg reflection regime, as shall restrict ourselves here to discussing only the small angle region. Despite fundamental differences in the basic interactions between x-rays (or neutrons) with atoms, most of the analysis of our x-ray scattering results presented here can be used for neutron studies, with minor modifications. Although it should be mentioned here that current synchrotron x-ray sources are several orders of magnitude more intense than neutron sources and as a result for relatively smooth solid surface specular reflectivity can be measured down to 10^{-9} with x-rays where as for neutrons this value is $\sim 10^{-6}$ before the measured intensity is buried with diffuse scattering and other background. As we shall discuss, this reduces the resolution with which one can determine density profile at an interface. The plan of this talk is as follows. After giving a brief outline of this method, we shall discuss out results on liquid surfaces first, and then we shall analyze specular and diffuse scattering data of multilayer interfaces. Finally we demonstrate a new method of anomalous reflectivity to determine electron density profiles of thin films in a model independent way.

The tunability and the polarization of synchrotron radiation open upon new possibilities for the study of magnetism. Studies on magnetic materials performed at the National Synchrotron Light Source are reviewed, and thy fall into four areas: structure, evolution of magnetic order, separation of L and S, and resonance effects. In the vicinity of atomic absorption edges, the Faraday effect, magnetic circular dichroism, and resonant magnetic scattering are all related resonance effects which measure the spin polarized density of states. The production and analysis of polarized beams are discussed in the context of the study of magnetism with synchrotron radiation.

A set of nonlinear differential equations describing the dynamics of an exciton-photon-carrier system driven by two external classical laser fields is established taking into account the interaction between the quasiparticles as well as the screening of the photon-exciton transition due to the presence of definite exciton and carrier densities. It is shown that both stationary and transient behaviours of the system are considerably influenced by the densities. While the exciton-assisted photon-exciton transition may lead to optical tristability, it, together with the exciton-carrier interaction, modifies the parameter domains in which the phase trajectories form a limiting cycle, a torus or a strange attractor. The system dynamics thus can simply be controlled by adjusting the exciton or/ and the carrier densities which in turn depend on the level of the external optical pumpings. (author). 26 refs, 1 fig.

8185 (INIS-BR–2871) **Color centers as simultaneous active laser media and saturable absorbers.** Vieira Junior, N.D. (Instituto de Pesquisas Energeticas e Nucleares (IPEN), Sao Paulo, SP (Brazil)); Assis, L.S.; Morato, S.P. Instituto de Pesquisas Energeticas e Nucleares (IPEN), Sao Paulo, SP (Brazil). 1990 15p. Order Number DE92614559. Source: OSTI; NTIS (US Sales Only); INIS.

There is a family of color centers and metal ion doped crystals that absorb in the emission region of the neodimium lasers. These centers are in general laser active, being usually pumped in a collinear scheme. They can also be used as saturable absorbers for CW passive Q-switching, but this limits the maximum absorption that can be introduced in the laser cavity thus limiting the maximum gain achievable in the saturable absorber/active pumped medium. By using a coupled cavities scheme we were able to optimize the performance of the pumped medium and obtain CW Q-switched operation by an injection mechanism, being the saturable absorber the unique source of loss for the pump. We coupled an astigmatically compensated $KC1:T1^0(1)$ color center laser cavity with a Nd laser cavity using both properties of the $KC1:T1^0(1)$ crystal. We obtained complete Q switching of both lasers with a typical pulse width of one microsecond and a pumping efficiency of the color center laser in the order of 40% achieving a maximum output power of 1.3 watts for an input pump power of 3 W from the Nd;YAG laser. The Nd:YAG Q-switched operation was also tested in this coupled cavities scheme using $LiF:F_2^-$ color centers. The obtained pulse widths agree well with a simple theoretical model. (author).

This work was performed as part of the research program of the 'Stichting voor Fundamenteel Onderzoek der Materie FOM' (Foundation for Fundamental Research into Matter), with financial support from the 'Nederlandse Organisatie voor Wetenschappelijk Onderzoek WNO' (Netherlands Organization for Scientific Research), and the Program for Innovative Research of the Ministry for Economic Affairs (IOP-Metals). The work was performed in collaboration with the Division Physical Chemistry of the Solid State of the Laboratory of Materials Science of Delft University of Technology;includes summary in Dutch.

In this thesis a novel preparation technique for the fabrication of homogeneous single-phase nitride layers in iron is presented. This technique consists of a double implantation scheme. First a N (pre-) implantation, at an energy of a few hundred keV and at a low substrate temperature, is performed to nucleate nitride particles in the near-surface region. Then the specimen temperature is raised to 300 degree C and N is implanted at 1 MeV such that the N comes to rest in the Fe substrate at the back side of the preimplanted region. At this temperature N rapidly diffuses in the F matrix; hence, if it arrives at a pre-existing nitride particle, this is enabled to grow. closed γ'-Fe_4N layers result which grow at the substrate side for higher N fluences. Although these layers are buried under the surface, it is expected that by optimizing the implantation conditions, or even with a combination of implantation and thermochemical techniques, μm thick surface layers can be achieved. This thesis aims, first, to present a large body of experiments with the purpose of establishing the conditions under which nitride layers in Fe can be fabricated. Further, it addresses the role of phase formation, precipitation, phase transformation, diffusion, and beam-induced effects on the formation, growth and stability of γ' layers. Finally, it discusses these results in terms of the thermodynamics and kinetics of the experimentally identified processes. (author). 74 refs.; 33 figs.; 5 tabs.

8193 (IS-T-1579) **The design, construction and applications of a novel double-axi helium atom spectrometer.** Folkerts, R. Ames Lab., IA (United States). 20 Dec 1991. 152p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-82. Order Number DE92005091. Source: OSTI; NTIS; INIS; GPO Dep.

A novel helium atoms spectrometer has been developed for the study of elastic and inelastic collisions with surfaces. The spectrometer is a double-axis design, providing the experimentalist with the capability of using an analyzer crystal to provide energy resolution for either elastic or inelastic experiments. The spectrometer in novel in that scattering angle at both axes may be adjusted during the experiment, allowing great flexibility in the design and execution of experiments of solid surfaces. The mechanisms and operating characteristics of the spectrometer are described. The initial tests of the spectrometer, using the well characterized LiF(001) surface, are also presented. These tests demonstrate that the spectrometer may function as a high precision double-axis diffractometer. During these initial tests, spurious scattering events and an insufficient signal to background ratio prevented the observation of single phonon scattering. Subsequent modifications to improve the signal to background are described.

8194 (LA-UR-91-3851) **Probing fine magnetic particles with neutron scattering.** Pynn, R. Los Alamos National Lab., NM (United States). [1991]. 11p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-36. (CONF-9111164-1: International workshop on studies of magnetic properties of fine particles and their relevance to materials science, Rome (Italy), 4-8 Nov 1991). Order Number DE92005018. Source: OSTI; NTIS; INIS; GPO Dep.

Because thermal neutrons are scattered both by nuclei and by unpaired electrons, they provide an ideal probe for studying the atomic and magnetic structures of fine-grained magnetic materials, including nanocrystalline solids, thin epitaxial layers, and colloidal suspensions of magnetic particles, known as ferrofluids. Diffraction, surface reflection, and small angle neutron scattering (SANS) are the techniques used. With the exception of surface reflection, these methods are described in this article. The combination of SANS with refractive-index matching and neutron polarisation analysis is particularly powerful because it allows the magnetic and atomic structures to be determined independently. This technique has been used to study both dilute and concentrated ferrofluid suspensions of relatively monodisperse cobalt particles, subjected to a series of applied magnetic fields. The size of the cobalt particle core and the surrounding surfactant layer were determined. The measured interparticle structure factor agrees well with a recent theory that allows correlations in binary mixtures of magnetic particles to be calculated in the case of complete magnetic alignment. When one of the species in such a binary mixture is a nonmagnetic, cyclindrical macromolecule, application of a magnetic field leads to some degree of alignment of the nonmagnetic species. This result has been demonstrated with tobacco mosaic virus suspended in a water-based ferrofluid.

8195 (SAND-91-1508C) **Simulations of low-energy ion bombardment and epitaxial growth.** Chason, E.; Bedrossian, P.; Tsao, J.Y.; Dodson, B.W.; Picraux, S.T. Sandia National Labs., Albuquerque, NM (United States). [1991]. 6p. Sponsored by U.S. DOE Energy Research. DOE Contract AC04-76DP00789. (CONF-911202-5: Annual fall meeting of the Materials Research Society, Boston, MA (United States), 2-6 Dec 1991). Order Number DE92004211. Source: OSTI; NTIS; INIS; GPO Dep.

We have performed computer simulations of epitaxial growth and low-energy ion bombardment for comparison with reflection high-energy electron diffraction (RHEED) measurements. The simulations are based on a hybrid Monte Carlo/rate equation approach which includes the processes of defect creation (adatom and surface vacancy), surface diffusion, and attachment and detachment from steps and islands. In this work, we focus on simulating the experimental observations of ion-induced RHEED oscillations and cancellation of RHEED oscillations during simultaneous ion bombardment and growth. For the interaction of the low-energy ion with the surface, we consider two mechanisms: preferential sputtering (where the sputtering cross section depends on the atomic coordination) and mobile vacancies. Our results indicate that the primary interaction of the ion beam with the surface is probably through the creation of mobile vacancies, and that the degree of preferential sputtering is not large.

8196 (CNIC-00434) **Transportation properties of amorphous state InSb and its metastable middle phase.** Cao Xiaowen (Academia Sinica, Hefei, AH (China). Inst. of Plasma Physics). China Nuclear Information Centre, Beijing, BJ (China). Sep 1990. 17p. (In Chinese). (ASIPP-0019.). Order Number DE92614569. Source: OSTI; NTIS (US Sales Only); INIS.

The variation of the substrate temperature induces the metal-semiconductor transition in the condensation InSb films at low temperatrue. The electron conduction is dominant in the metal-type amorphous InSb and the hole in semiconductor-type one. In the metal-type amorphous InSb the electron-electron is correlated under the field above 0.1T in the temperature region of liquid nitrogen. The structure relaxation leads to not only the increase of the short range order but also the change of electron structure in metal-type amorphous InSb. The first conductance jump originates mainly from the increase of Hall mobility of the carrier, i.e. the increase of the short range order, and the system relaxes from the liquid-like to the lattice-like amorphous state. The three types of the crystallization phase transition for the metal-type amorphous InSb present obviously different transportation behaviours. Both metal-type amorphous state and metastable middle phase of InSb all are one of superconducting system with the lowest carrier concentration ($n_0 \approx 10^{18}$ cm^{-3}). Superconducting T_c of the metastable middle phase is related to the state density near Fermi surface, i.e. the higher T_c corresponds to the higher state density. The quasi-two-dimensional structure is favourable to superconductivity.

8197 (DOE/ER/14017–3) **Flux flow, pinning, and resistive behavior in superconducting networks: Final progress report, May 1, 1989–April 30, 1992.** Teitel, S. Rochester Univ., NY (United States). Dept. of Physics and Astronomy. Oct 1991. 15p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-89ER14017. Order Number DE92004064. Source: OSTI; NTIS; INIS; GPO Dep.

We have studied the behavior of fluctuation effects in superconducting systems using numerical simulations of XY and Coulomb gas models. Flux flow resistance in two dimensional Josephson junction arrays has been calculated, and related to correlations in vortex structure. Randomness has been introduced, and its effects on the superconducting transition, and vortex mobility, have been studied. We find that randomness destroys phase coherence, yet the randomness induced pinning reduces flux flow resistance at low temperatures. Vortex line fluctuations in high temperature superconductors have been studied using a three dimensional XY model. We have considered the melting of the vortex line lattice, and the entanglement and cutting of vortex lines in the vortex line liquid phase. Vortex line entangling and cutting appear to occur on the same length scales in the liquid phase. The vortex structure function has been calculated and from it, elastic properties of the vortex line liquid have been inferred. The two dimensional classical Coulomb gas, where charges map onto vortices in the superconducting system, has been simulated. The melting transitions of ordered charge (vortex) lattices have been studied, and we find evidence that these transitions do not have the critical behavior expected from standard symmetry analysis.

8198 (FNAL-TM–1757) **End designs for superconducting magnets.** Bossert, R.C.; Cook, J.M.; Brandt, J.S. Fermi National Accelerator Lab., Batavia, IL (United States). Oct 1991. 15p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH03000. (CONF-890872–16: Workshop on physics at Fermilab in the 1990's, Breckenridge, CO (United States), 15-24 Aug 1989). Order Number DE92003339. Source: OSTI; NTIS; INIS; GPO Dep.

New accelerators such as the Tevatron Upgrade frequently require higher magnetic fields that have been conventionally used in superconducting magnets. Modern magnet designs often have a smaller bore diameter and wider cable than the early (e.g., Tevatron) superconducting coils and are consequently harder to wind. These developments make consideration of end winding more important. End parts must be made to confine the conductors to a consistent shape. This shape must be defined and described to both the parts manufacturers and those analyzing the magnetic field. Internal stresses in the cable must be minimized. It has therefore become necessary to reevaluate the methods used to determine the configuration of a magnetic end. This note describes those methods and attempts to apply them to possible cross sections for high field dipoles. The original Tevatron dipole end configuration is reviewed for reference. 3 refs., 10 figs., 1 tab.

8199 (IC–91/217) **On the combination of the Cooper pair and the Ogg pair in the high-T_c oxide superconductor.** Zhang Liyuan. International Centre for Theoretical Physics, Trieste (Italy). Aug 1991. 12p. Order Number DE92614571. Source: OSTI; NTIS (US Sales Only); INIS.

In this paper it is argued that the superconductivity of the high-T_c oxide superconductor (HTOS) can be explained by the combinating mechanism of the Cooper pair and the Ogg pair. The properties of the superconducting state of the HTOS have been calculated under this mechanism, and the theoretical results are overall consistent with the experiment. (author). 37 refs.

8200 (IS-T–1577) **Phenomenological theory of electrodynamic properties of type-II superconductors.** Coffey, M.W. Ames Lab., IA (United States). 3 Jan 1992. 211p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-82. Order Number DE92005363. Source: OSTI; NTIS; INIS; GPO Dep.

The dissertation deals with certain electrodynamic properties of type-2 superconductors which are derived from phenomenological theory. For both discrete and continuous type-2 superconductors, vortex dynamics are investigated and their consequences described. Many of the results of the thesis are expected to apply to high-transition temperature superconductors. The subject of dimensional crossover in a layered anisotropic superconductor and its implications for vortex structure is discussed. For discrete superconductors, specific quantitative results include the viscous drag coefficient for vortex motion parallel to the layers of a Josephson-coupled layer model, the lower critical field for parallel applied field for such a model, and a vortex inertial mass for motion parallel to the layers. A self-consistent approach for describing the various fields and densities associated with a vortex lattice in a continuous superconductor subject to small-amplitude driving forces is developed. This approach takes into account the nonlocality of vortex interactions, yielding a complex penetration depth which in turn gives certain linear response functions such as the complex permeability. The resulting theory is expected to be valid over wide range of magnetic inductions, temperatures, and frequencies. The frequency- and temperature- dependent vortex mobility is developed, providing a unifying tool for describing vortex dynamics. By including a random force in the vortex equation of motion and treating it in analogy to Brownian motion, the vortex mobility is extended to include flux creep effects. For continuous superconductors, specific quantitative results are given for the vortex inertial mass and dynamic mobility and complex rf surface impedance and permeability. A description of energy dissipation and screening is given in terms of the rf surface impedance and permeability.

8201 (KAERI/RR–927/90) **A study on the development of high Tc superconducting materials and on the effects of neutron irradiation.** Won, Dong Yeon (Korea Atomic Energy Research Inst., Daeduk (Korea, Republic of)); Chang, In Soon; Lee, Jong Min. Korean Standard Research Inst., Seoul (Korea, Republic of). Aug 1990. 98p. (In Korean). Order Number DE92615531. Source: OSTI; NTIS (US Sales Only); INIS.

An Ag-sheathed (Pb,Bi)SrCaCuO superconducting tape was prepared by the cold rolling and post heat treatment method. The tape shows a c-oriented texture perpendicular to the rolling direction. The aligned grain structure may be resulted from the anisotropic grain growth of the high Tc superconducting phase. The bulk (Pb,Bi)SrCaCuO samples with (a) Tc=10lK and (b) 96K were prepared by the solid state reaction method and were neutron-irradiated up to 1.5 x $10^{1}8$ n/cm^2. After irradiation the zero resistance temperature(Tc) of (a) was decreased to 96K but (b) did not show any change in Tc. The critical current density of (a) also decreased from 0.75A/cm^2 but (b) was constant as 1.5 A/cm^2 after irradiation. (Author).

8202 (KAERI/RR–940/90) **A study on the development of high Tc superconducting materials.** Won, Dong Yeon (Korea Atomic Energy Research Inst., Daeduk (Korea, Republic of)); Chang, In Soon; Hong, Gye Won; Lee, Hee Gyoun; Kim, Chan Joong; Lee, Ho Jin; Park, Soon Dong; Kim, Woo Gon; Kim, Ki Baik; Kwon, Sun Chil. Korea Atomic Energy Research Inst., Daeduk (Korea, Republic of). Jan 1991. 58p. (In Korean). Order Number DE92615532. Source: OSTI; NTIS (US Sales Only); INIS.

High magnetization bulk YBaCuO superconductor was synthesized using Quasi-Melt-Process. The extent of magnetization was dependent on the composition of initial powder mixture, and the magnetization of $Y_1Ba_{1.8}Cu_3O_y$ and $Y_{1.2}Ba_{2.1}Cu_{3.1}O_x$ (123 + 10%211) was twice than that of $Y_lBa_{l.8}Cu_3O_y$. Anomalous double peak was observed in the M-H curve of $Y_1Ba_{1.8}Cu_3O_y$ and $Y_{l.2}Ba_{2.1}Cu_{3.1}O_x$ (123 + 10%211) specimen. YBaCuO superconducting thin film with a Tc of 81K has been prepared on (100) MgO single crystal substrate by CVD method. The crystallographic nature and R-T characteristics were hardly affected by the pressure change of reaction tube. However, the microstructure of the film was greatly affected: the film thickness increased three times when the pressure of the reaction tube was reduced from 20 to 5 torr. (Author).

8203 (KFK–4917) **Superconductivity in the homogeneous electron gas: Exchange and correlation effects.** Bueche, T. Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Nukleare Festkoerperphysik; Karlsruhe Univ. (T.H.) (Germany). Fakultaet fuer Physik. Sep 1991. 117p. (In German). Order Number DE92759010. Source: OSTI; NTIS (US Sales Only); INIS.

We examine the influence of exchange and correlation effects on normal-state and superconducting properties of the homogeneous electron gas. Our investigations extend an earlier paper by Rietschel and Sham on exact solutions of Eliashberg's equations for the random-phase-approximation (RPA)-screened Coulomb interaction between the electrons. We do this in two steps: In a first step, the dielectric function is modified by including local-field corrections, while in a second step, the spin dependence of the electron-electron interaction is taken into account explicitly within a phenomenological model first proposed by Kukkonen and Overhauser. This latter step is synonymous with consideration of vertex corrections. Our main result is the following: Local-field corrections alone are not able to remove the artifact of plasmon-induced superconductivity in the RPA-screened electron gas as reflected by negative values for the Coulomb pseudopotential μ^*. Only additional consideration of spin-dependent vertex corrections leads to values for μ^* which are positive throughout and of order 0.05-0.1 for electronic densities $1 \leq r_S \leq 5$. In a last step we extend the formalism for μ^* to crystal electrons taking vanadium as example. (orig.).

8204 (LA-UR–91-3717) **Spin Singlet Quantum Hall Effect and nonabelian Landau-Ginzburg theory.** Balatsky, A. (Los Alamos National Lab., NM (United States)). Los Alamos National Lab., NM (United States). [1991]. 25p. Sponsored by U.S. DOE Office of Administration and Human Resource Management. DOE Contract W-7405-ENG-36. (CONF-9108184–1: Adriatico conference on strongly correlated electrons, Trieste (Italy), Aug 1991). Order Number DE92003871. Source: OSTI; NTIS; INIS; GPO Dep.

In this paper we present a theory of Singlet Quantum Hall Effect (SQHE). We show that the Halperin-Haldane SQHE wave function can be written in the form of a product of a wave function for charged semions in a magnetic field and a wave function for the Chiral Spin Liquid of neutral spin-$\frac{1}{2}$ semions. We introduce field-theoretic model in which the electron operators are factorized in terms of charged spinless semions (holons) and neutral spin-$\frac{1}{2}$ semions (spinons). Broken time reversal symmetry and short ranged spin correlations lead to $Su(2)_{\kappa=1}$ Chern-Simons term in Landau-Ginzburg action for SQHE phase. We construct appropriate coherent states for SQHE phase and show the existence of SU(2) valued gauge potential. This potential appears as a result of "spin rigidity" of the ground state against any displacements of nodes of wave function from positions of the particles and reflects the nontrivial monodromy in the presence of these displacenmants. We argue that topological structure of $Su(2)_{\kappa=1}$ Chern-Simons theory unambiguously dictates semion statistics of spinons. 19 refs.

8205 (LBL–31157) **Suppression of magnetic flux noise in $YBa_2Cu_3O_{7-x}$ flux transformers.** Ferrari, M.; Wellstood, F.C.; Kingston, J.J.; Johnson, M.; Clarke, J. Lawrence Berkeley Lab., CA (United States). Aug 1991. 12p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-9106224–2: 1991 superconducting quantum interference devices (IC SQUID) meeting, Berlin (Germany), 18-21 Jun 1991). Order Number DE92004306. Source: OSTI; NTIS; GPO Dep.

We have constructed hybrid magnetometers by coupling a flux transformer of $YBa_2Cu_3O_{7-x}$ to a Nb-PbIn SQUID. The low frequency (1/f) noise is dominated by fluctuations in the supercurrent circulating in the transformer, driven by vortex motion. The application of a small static magnetic field induces a supercurrent that reversibly suppresses the noise, in quantitative agreement with a model of thermally activated vortex hopping between symmetrical pairs of pinning sites. A persistent current can be used to reduce the low frequency noise power of high-$T_c$flux transformers by at least one order of magnitude. 11 refs., 4 figs., 1 tab.

8206 (LNS–160) **Neutron spectroscopic investigation of high temperature superconductors.** Allenspach, P. Eidgenoessische Technische Hochschule, Zuerich (Switzerland). Lab. fuer Neutronenstreuung. 1991. 152p. (In German). Order Number DE92615534. Source: OSTI; NTIS (US Sales Only); INIS.

In the high-temperature superconductors of the type $YBa_2Cu_3O_x$, $YBa_2Cu_4O_8$ and $YBa_2Cu_{3.5}O_{15}$ the Y-ion in between the superconducting planes can be substituted by most of the rare earth ions without changing the superconducting properties, whereas the electron superconductors Nd_2Cu and Pr_2CuO_4 alredy contain rare earth ion. The crystalline electric field of the plane oxygen and copper splits the (2J+1)-fold degeneracy of the magnetic ground state of the rare earth ion into different levels. This CEF-splitting can directly be measured by inelastic neutron scattering. Therefore the rare earth ion is a local probe of the structure and the charges in the superconducting planes. By varying sample parameters as oxygen stoichiometry or doping the CEF-splitting turned out to be very sensitive to structural and electronic changes. Taking into account both structure and CEF data quantitative results of the charge associated with doping or oxygen variation can be derived, if the quality of the data is sufficient. J-mixing and intermediate coupling had to be included in the analysis of the CEF-splitting of $Nd_{1+y}Ca_vBa_{2-y-v}Cu_{3+z}O_x$. A small decrease of the oxygen concentration turned out to induce a small amount of negative charge into the superconducting planes, whereas simultaneously T_c decreases very rapidly. Alreay 0.03 'e/plane oxygen' is needed. The origin of this behavior is the rather weak stability of $NdBa_2Cu_3O_x$ displayed as well in the tendency towards O5-occupation. Doping of additional Nd onto the Ba site or Ca yields additional negative or positive charge on the plane oxygen, respectively. CEF-calculations of the charge variation are consistent with the values obtained by other methods (e.g. Hall effect). (author) figs., tabs., 108 refs.

70 PLASMA PHYSICS AND FUSION

8207 (INIS-BR–2865) **Introduction to controlled thermonuclear fusion.** Assis, A.S. de (Universidade Federal Fluminense, Niteroi, RJ (Brazil). Inst. de Fisica); Rapozo, C.C.; Paris, P.J.; Yasseen, F. Universidade Federal Fluminense, Niteroi, RJ (Brazil). Inst. de Fisica. Jul 1988 30p. (In Portuguese). Order Number DE92614431. Source: OSTI; NTIS (US Sales Only); INIS.

During many centuries the origin of the enormous power output of the sun remained as a mistery. However, in this century, the physicists have discovered that stars get their energy from the fusion of light nuclei (such as deuterons and tritons), and the Einstein's equation, $AE = (Am)c^2$, was the way to explain this physical process. (author).

8208 (AMPC–031-046) **The optimization of production and control of hot-electron plasmas: Final technical report.** Dandl, R.A.; Guest, G.E. Applied Microwave Plasma Concepts, Inc., Carlsbad, CA (United States). 1 Oct 1991. 53p. Sponsored by U.S. DOE Energy Research. DOE Contract FG03-87ER53256. Order Number DE91019076. Source: OSTI; NTIS; INIS; GPO Dep.

This report discusses the following topics: The generation rate of ECH triggered runaway electrons; space- and time-resolved measurements using free-free Bremsstrahlung; and wave propagation characteristics in the tokamak.

8209 (CNIC–00425) **Preliminary results in double cusp tandem mirror MM-4U.** Ming Linzhou (Southwest Inst. of Physics, Leshan, SC (China)); Tian Zhongyu; Feng Xiaozhen. China Nuclear Information Centre, Beijing, BJ (China). Oct 1990. 10p. (In Chinese). (SIP–0041.). Order Number DE92614432. Source: OSTI; NTIS (US Sales Only); INIS.

MM-4U device and preliminary experimental results are presented. Main results are as follows: The plasma has been produced by means of the injection of strong electron current; the axial profile of the plasma potential and the plasma electron density have been obtained respectively, they had a simular form; the plasma potential in the centre of the east cusp, the west cusp and the simple mirror; $V_e = -180V$, $V_w = -164V$, V_m -1.8V; the electron density: $n_e = 1.7 \times 10^{11}$ cm^{-3}, $n_w = 4.7 \times 10^{10}$ cm^{-3}, $n_m = 7.5 \times 10^7$ cm^{-3}; the electron temperature: $T_e = (19.9 \pm 1.6)$ eV, $T_w = (20.7 \pm 1.7)$ eV; the plasma pressure at 8 cm on the right of the west cusp centre is about 6.76 Pa, $\beta \simeq 1.7 \times 10^{-3}$. The plasma instability has been observed in the simple mirror, its vibration frequency was 7≈9.2 kHz. The results are discussed. The next new task of the physical experiment are proposed.

8210 (CTH-IEFT-PP–1991-09) **Effects of trapped alpha particles on internal kink modes in Tokamaks.** Helander, P.; Lisak, M. Chalmers Univ. of Tech., Goeteborg (Sweden). Inst. for Electromagnetic Field Theory and Plasma Physics. [1991]. 19p. Order Number DE92614462. Source: OSTI; NTIS (US Sales Only); INIS.

The theory of linear interaction between internal kink modes and fusion produced high-energy alpha particles in a toroidal plasma is extended by including finite banana width corrections to the alpha dynamics. An important implication of the theory for the stability properties of kink modes is that the finite banana width effects increase the values of the poloidal alpha beta which are required to attain the stable domain of operation as well as to excite the high-frequency fishbone instability. Furthermore, these effects provide a reduction of the instability growth rate in both the low and high frequency unstable regimes. (au).

8211 (CTH-IEFT-PP–1991-15) **Double beam free electron laser.** Wilhelmsson, H. (Laboratoire de Physique des Milieux Ionises, Ecole Polytechnique, Palaiseau (France)). Chalmers Univ. of Tech., Goeteborg (Sweden). Inst. for Electromagnetic Field Theory and Plasma Physics. [1991]. 8p. Order Number DE92614463. Source: OSTI; NTIS (US Sales Only); INIS.

Parametric interaction of longitudinal and transverse waves is studied for a double-beam system. The coupling between a transverse wave or a wiggler, and a longitudinal wave causes stimulated collective oscillations enhanced by double-stream amplification. These enhances oscillations are transformed by the wiggler into transverse waves and thus provide a source of radiation of the free electron laser. The analysis suggests new possibilities concerning free-electron laser operation. (au).

8212 (CTH-IEFT-PP–1991-16) **Nonlinear dynamics of reaction-diffusion systems: Analysis and computations.** Wilhelmsson, H. (Chalmers Univ. of Technology, Goeteborg (Sweden). Inst. of Electromagnetic Field Theory and Plasma Physics); Etlicher, B. Chalmers Univ. of Tech., Goeteborg (Sweden). Inst. for Electromagnetic Field Theory and Plasma Physics. [1991]. 26p. Order Number DE92614456. Source: OSTI; NTIS (US Sales Only); INIS.

Equilibria and dynamics of reaction-diffusion systems are studied by means of analysis and computations based on a central expansions method for radially symmetric as well as angularly asymmetric distributions. Effects of boundary conditions are included. The interplay between the different processes in the evolution of the system is considered. The investigation provides a unified description in one, two and three dimensions. A particular application concerns the time evolution of temperature profiles in a fusion reactor plasma. (au).

8213 (CTH-IEFT-PP–1991-17) **Evolution of temperature profiles in a fusion reactor plasma.** Wilhelmsson, H. (Chalmers Univ. of Technology, Goeteborg (Sweden). Inst. for Electromagnetic Field Theory and Plasma Physics); Etlicher, B.; Cairns, R.A.; Le Roux, M.N. Chalmers Univ. of Tech., Goeteborg (Sweden). Inst. for Electromagnetic Field Theory and Plasma Physics. [1991]. 16p. Order Number DE92614457. Source: OSTI; NTIS (US Sales Only); INIS.

The dynamics of plasma temperature profiles depends on the simultaneous processes of diffusion and creation, e.g. heating by alpha particles, as well as losses, e.g. bremsstrahlung, and furthermore on the effects of boundaries, which play an essential role in the formation of equilibria. The temperature evolution is governed by a partial differential equation of the reaction-diffusion type. The heating by alpha particles is represented by a source term which depends on temperature to a certain power. The present contribution summarizes the concepts and recent results of a new technique of analysis based on a central expansion in the spatial variable. The problem of studying the nonlinear partial differential equation governing the evolution of a temperature profile is transformed to a description in terms of three characteristic dynamic variables (amplitude, width and shape) which depend only on time and which are governed by three coupled first order differential equations. Such equations allow for dynamic description of self-organisation in open as well as bounded systems. The technique simplifies the description of the dynamic properties of the temperature evolution of a burning fusion plasma. It provides physical insight in the dynamics of the system by analysis of the interplay between the various simultaneous processes. In particular, the problems of existence, accessibility and approach to possible equilibria can be studied by means of the new technique.

8214 (CTH-IEFT-PP–1991-18) **Simultaneous diffusion, reaction and radiative loss processes in plasmas: Numerical analysis with application to the dynamics of a fusion reactor plasma.** Wilhelmsson, H. (Chalmers Univ. of Technology, Goeteborg (Sweden). Inst. for Electromagnetic Field Theory and Plasma Physics); Le Roux, M.N. Chalmers Univ. of Tech., Goeteborg (Sweden). Inst. for Electromagnetic Field Theory and Plasma Physics. [1991]. 19p. Order Number DE92614439. Source: OSTI; NTIS (US Sales Only); INIS.

Results are presented accounting for a selection of extensive numerical calculations of the evolution in space and time for a dynamic system, governed by a nonlinear diffusion equation with source and loss terms (which could also be nonlinear). The system is assumed to be circularly symmetric and limited by an external boundary where the value of the depending variable (e.g. temperature) is supposed to be zero. (au).

8215 (CTH-IEFT-PP–1991-19) **Energetic ion population formed in close collision with fusion alpha-particles.** Ryutov, D. (Institute of Nuclear Physics, Novosibirsk (USSR)). Chalmers Univ. of Tech., Goeteborg (Sweden). Inst. for Electromagnetic Field Theory and Plasma Physics. [1991]. 14p. Order Number DE92614458. Source: OSTI; NTIS (US Sales Only); INIS.

Close collisions of fusion alpha-particles with thermal plasma ions (both of impurities and of main component) give rise to formation of high energy 'halo' in the ion velocity space, extending to the energies of MeV-range even for rather heavy ions, like iron. The implications of this process for the diagnostics of the burning plasma have been discussed. There seem to be possible two versions of the diagnostics: * measurement of Doppler contours of the lines radiated by noncompletely stripped impurity ions, * detection of prompt losses of light impurities. In both versions the spatial resolution can be attained by injecting into the plasma the pellets containing the desired impurities. Another option is to detect the prompt losses of 7 MeV alpha-particles formed by collisions between 3.5 MeV alpha-particles. (au).

8216 (CTH-RF–76) **Data collection program for TANSY-KM5.** Grosshoeg, G. Chalmers Univ. of Tech., Goeteborg (Sweden). Dept. of Reactor Physics. 5 Jul 1991. 55p. Order Number DE92614442. Source: OSTI; NTIS (US Sales Only); INIS.

The purpose of the TANSY data collection program is dual. During normal measurement it fetches the incoming data, compresses them in a suitable shape and places the result in the CAMAC memory modules. The data should afterwards be taken care of by the JET Codas system. It may also be used as a stand-alone system. Calibrations can be done controlled by a terminal connected to the auxiliary CAMAC controller or by the host computer system. The program is written for the Starburst, the CES auxiliary CAMAC controller ACC 2180. It is essentially a PDP 11/70 computer on a microchip offering several advanced computer options. The program is written in assembler code in order to achieve shortest possible collection times. Some examples of user programs for the host are presented. They are written for RSX11/M operating system in a host Starburst. (au).

8217 (CTH-RF–81) **Technical description of the Tansy Spectrometer, TANSY-KM5.** Grosshoeg, G.; Aronsson, D.; Hoek, M.; Rydz, R.; Norberg, L.; Urholm, L. Chalmers Univ. of Tech., Goeteborg (Sweden). Dept. of Reactor Physics. Jul 1991. 37p. Order Number DE92614443. Source: OSTI; NTIS (US Sales Only); INIS.

The TANSY-KM5 neutron spectrometer is a system containing a lot of advanced electronic and mechanical components. The design of the system has been reported in two documents (CTH-RF–54 (INIS 17:10206) and CTH-RF–43 (INIS 14:797424)). The purpose of this documentation is to give a brief overview of the system as it is defined at the time of delivery.

8218 (CTH-RF–82) **User manual for TANSY-KM5.** Grosshoeg, G.; Aronsson, D.; Drozdowicz, K.; Hoek, M.; Rydz, R.; Norberg, L.; Urholm, L. Chalmers Univ. of Tech., Goeteborg (Sweden). Dept. of Reactor Physics. 3 Jul 1991. 41p. Order Number DE92614444. Source: OSTI; NTIS (US Sales Only); INIS.

This document describes procedures for the set-up and use of TANSY. It is a complement to the report 'Technical description of the Tansy Spectrometer, TANSY-KM5' (CTH-RF–81) and is aimed to guide the user through the initial adjustments and calibrations to a normal use of the instrument. Details, such as placing of jumpers and settings of potentiometers in electronic modules, are not given here. The calibration parameters obtained during the test period are listed at the end of each calibration chapter. They can be used as a first estimate of unknown parameters.

8219 (CTH-RF–83) **Fan-out module for TANSY-KM5.** Rydz, R.; Norberg, L.; Urholm, L.; Grosshoeg, G. Chalmers Univ. of Tech., Goeteborg (Sweden). Dept. of Reactor Physics. 1 Jul 1991. 20p. Order Number DE92614445. Source: OSTI; NTIS (US Sales Only); INIS.

The FAN-out module is a driver module for three time-to-digital units and one multiscaler unit. The 16 input signals come from the Ortec CO 1600 coincidence unit. Diagrams of the circuits and a component list for the module are given here.

8220 (CTH-RF–84) **Gate-keeper module for TANSY-KM5.** Rydz, R.; Norberg, L.; Urholm, L.; Grosshoeg, G. Chalmers Univ. of Tech., Goeteborg (Sweden). Dept. of Reactor Physics. 1 Jul 1991. 13p. Order Number DE92614446. Source: OSTI; NTIS (US Sales Only); INIS.

The purpose of the Gate-keeper is the control of the RDCs, the ADCs, and the constant fraction discriminator. The Gate-keeper synchronizes the units and ensures that the data taking is clean and not intermixed with other events. There are six Gate-Keepers in the system, one for each proton detector. All input circuits are designed to accept TTL as well as negative NIM signals. The output is 50 ohm TTL or negative NIM as defined by internal jumpers.

8221 (CTH-RF–85) **Control and evaluation programs for TANSY-KM5.** Grosshoeg, G.; Aronsson, D.; Hoek, M.; Rydz, R.; Norberg, L.; Urholm, L. Chalmers Univ. of Tech., Goeteborg (Sweden). Dept. of Reactor Physics. 4 Jul 1991. 32p. Order Number DE92614447. Source: OSTI; NTIS (US Sales Only); INIS.

Our first task was to purchase a computer and to create a basic software library for the preliminary test of the components. Our choice was a Starburst system from CES. The computer was a PDP-11/70 on a chip. It is the same computer as the ones used by the auxiliary CAMAC crate controllers in the TANSY system. However, the host has a 256 kbyte memory instead of the 64 kbyte memory used in the crate controllers. The operation system is RSX11-M. It is a real time system with properties suitable for laboratory works. However, the computer works in 64 kbyte partitions which limits the size of the programs. Four program systems were written. The two first were one-parameter systems for amplitude and time measurements using the ADCs and TDCs which later should be included in the TANSY system. These systems were supplemented with two two-parameter systems, one for time and amplitude measurements and one for time measurements on 16 detectors simultaneously. The display capabilities of these program systems have been used extensively by the TANSY programs. The programs needed for the manipulation of the system give the user a possibility to manually run the system without any intervention from the normal CODAS control system. The programs have been used for calibration measurements as well as test of the TANSY system. The evaluation programs use the output file from a normal measurement. The data file may be tested for errors. The true events can be sorted into different configurations. The final one is the neutron energy sort program, which gives the neutron energy distribution.

8222 (DOE/ER/53198–179) **Plasma physics research in the MST toroidal confinement device: Progress report, November 1, 1990–October 31, 1991.** Wisconsin Univ., Madison, WI (United States). [1991]. 4p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-85ER53198. Order Number DE92004056. Source: OSTI; NTIS; INIS; GPO Dep.

MST has matured in its operation to the point that substantial physics results are emerging. This paper contains accomplishments in FY 91 separated into physics results, diagnostic improvements, and machine improvements. In addition to achievements of the eight months which covers 11/1/91 to the present (7/15/91), we include the expected progress in the remaining four months of the grant period.

8223 (DOE/ER/53198–183) **Current density fluctuations and ambipolarity of transport.** Shen, W.; Dexter, R.N.; Prager, S.C. Wisconsin Univ., Madison, WI (United States). Oct 1991. 16p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-85ER53198. Order Number DE92005231. Source: OSTI; NTIS; INIS; GPO Dep.

The fluctuation in the plasma current density is measured in the MIST reversed field pinch experiment. Such fluctuations, and the measured radial profile of the k spectrum of magnetic fluctuations, supports the view and that low frequency fluctuations ($f < 30$ kHz) are tearing modes and high frequency fluctuations (30 kHz $< f <$ 250 kHz) are localized turbulence in resonance with the local equilibrium magnetic field (i.e., $k \cdot B = 0$). Correlation of current density and magnetic fluctuations ($< \tilde{j}_{||}\tilde{B}_r >$) demonstrates that radial particle transport from particle motion parallel to a fluctuating magnetic field is ambipolar over the full frequency range.

8224 (DOE/ER/53198–184) **Turbulent transport in the MST reversed-field pinch.** Rempel, T.D.; Almagri, A.F.; Assadi, S.; Den Hartog, D.J.; Hokin, S.A.; Prager, S.C.; Sarff, J.S.; Shen, W.; Sidikman, K.L.; Spragins, C.W.; Sprott, J.C.; Stoneking, M.R.; Zita, E.J. Wisconsin Univ., Madison, WI (United States). Nov 1991. 27p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-85ER53198. (CONF-9111127–6: 33. annual Division of Plasma Physics/American Physical Society (DPP/APS) meeting, Tampa, FL (United States), 4-8 Nov 1991). Order Number DE92005230. Source: OSTI; NTIS; INIS; GPO Dep.

Measurements of edge turbulence and the associated transport are ongoing in the Madison Symmetric Torus ($R = 1.5$ m, $a = 0.52$ m) reversed-field pinch using magnetic and electrostatic probes. Magnetic fluctuations are dominated by $m = 1$ and $n \sim 2R/a$ tearing modes. Particle losses induced by magnetic field fluctuations have been found to be ambipolar ($<\tilde{J}_{parallel}\tilde{B}_r> = O$). Electrostatic fluctuations are broadband and turbulent, with mode widths $\delta m \sim$ 3–7 and $\delta n \sim$70–150. Particle, parallel current, and energy transport arising from coherent motion with the fluctuating $\tilde{E}xB$ drift has been measured. Particle transport via this channel is comparable to the total particle loss from MST. Energy transport (from $<\tilde{P}\tilde{E}_{phi}>/B_o$) due to electrostatic fluctuations is relatively small, and parallel current transport (from $<\tilde{J}_{parallel}\tilde{E}_{chi}>/B_o$) may be small as well.

8225 (DOE/ER/53198–185) **Ion heating and MHD dynamo fluctuations in the reversed field pinch.** Scime, E.; Hokin, S.; Watts, C.; Mattor, N. Wisconsin Univ., Madison, WI (United States). Jan 1992. 13p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-85ER53198. Order Number DE92005229. Source: OSTI; NTIS; INIS; GPO Dep.

Ion temperature measurements, time resolved to 10 μs, have been made in the Madison Symmetric Torus reversed-field pinch with a five channel charge exchange analyzer. The ion temperature, $T_i \approx 200$ eV for $I = 350$ kA, increases by as much as 100% during discrete dynamo bursts in MST discharges. Magnetic field fluctuations in the range 0.5–5 MHz were also measured. Structure in the fluctuation frequency spectrum at the ion cyclotron frequency appears as the bursts terminate, suggesting that the mechanism of ion heating involves the dissipation of dynamo fluctuations at ion gyro-orbit scales.

8226 (DOE/ER/53211-10) **Advanced development of particle beam probe diagnostic systems: Technical progress report, October 1, 1990–December 15, 1991.** Hickok, R.L.; Crowley, T.P.; Connor, K.A.; Schoch, P.M. Rensselaer Polytechnic Inst., Troy, NY (United States). Dec 1991. 7p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-85ER53211. Order Number DE92005299. Source: OSTI; NTIS; INIS; GPO Dep.

During the period covered by this report the 2 MeV heavy ion beam probe (HIBP) was installed on the TEXt tokamak. This report discusses the initial operating results of this probe.

8227 (DOE/ER/53212-178) **Theoretical reversed field pinch studies: Progress report, September 1, 1988–November 1, 1991.** Wisconsin Univ., Madison, WI (United States). [1991]. 9p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-85ER53212 ;FG02-89ER53291 ;AC03-83ER53150 ;FG02-86ER53218. Order Number DE92004419. Source: OSTI; NTIS; GPO Dep.

This report discusses: nonlinear RFP behavior with nonideal boundaries; three dimensional RFP equilibria with field errors; self-consistent current density transport from microturbulence; turbulence studies in the RFP; coupled rippling and g-mode turbulence; microtearing turbulence; feedback of resistive wall instabilities; anomalous ion heating from the dynamo; effect of fluctuations on tearing instability; and thermal alfven wave fluctuations. (LSP)

8228 (DOE/ER/53214-3) **Spectroscopic diagnostics of high temperature plasmas, January 1, 1991–December 31, 1991.** Johns Hopkins Univ., Baltimore, MD (United States). [1991]. 4p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-86ER53214. Order Number DE92005087. Source: OSTI; NTIS; INIS; GPO Dep.

During 1991, the activities of the John Hopkins University Plasma Spectroscopy Group have covered several areas of research, in the domain of XUV spectroscopy of magnetically confined fusion plasmas. While the main effort concentrated on the development of novel diagnostics which utilize Layered Synthetic Microstructures (LSMs) as the dispersive/filtering elements, work has been done in the area of detector development and the physics of the tokamak edge plasma. An XUV monochromator for the 20–200Å range, which uses flat LSMs, has been built and is currently operated on the D3-D tokamak at General Atomics in San Diego. A design for a follow-up experiment at D3-D is now in progress. As a preliminary step toward tokamak plasma imaging in the XUV wavelength range using curved LSM coated substrates, a prototype XUV camera was built and operated in our laboratory in image the A1 3 emission at λ-175Å from a Penning Ionization Discharge plasma. Based on these laboratory results, the design of the XUV camera, which will image plasma in the Phaedrus T tokamak O VI emission (150Å), has been completed. This instrument is presently under construction. Also a detailed design of a system composed of four LSM based imaging devices for $N_e(0)$ and $T_e(0)$ fluctuation measurements on TEXT has been completed. The accuracy and the uniformity of the LSM coatings on flat and small curved surfaces used in the above-mentioned instruments have been evaluated in our laboratory using an in-house built calibration facility and at the SURF II synchrotron at the National Institute of Standards and Technology.

8229 (DOE/ER/53218-17) **Magnetic confinement fusion plasma theory, Task 1: Final report, November 16, 1990–November 15, 1991.** Callen, J.D. Wisconsin Univ., Madison, WI (United States). Dept. of Nuclear Engineering and Engineering Physics. Jul 1991. 24p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-86ER53218. Order Number DE91019077. Source: OSTI; NTIS; INIS; GPO Dep.

The research performed under this grant during the current year has concentrated on a few key tokamak plasma confinement and heating theory issues: extensive development of a new Chapman-Enskog-like fluid/kinetic hybrid approach to deriving rigorously valid fluid moment equations; applications (neoclassical viscous force, instabilities in the banana-plateau collisionality regime, nonlinear gyroviscous force, unified plasma microinstability equations and their implications, semi-collisional presheath modeling, etc.) of this new formalism; interactions of fluctuating bootstrap-current-driven magnetic islands; determination of net transport processes and equations for a tokamak; and some other topics (extracting more information from heat-pulse-propagation data, modeling of BES fluctuation data, exploring sawtooth effects on energy confinement in DIII-D, divertor X-point modeling). Recent progress and publications in these areas, and in the management of the local NERSC node and fusion theory DECstation 5000 at UW-Madison are summarized briefly in this report.

8230 (DOE/ER/53218-18) **Auxiliary radiofrequency heating of tokamaks, Task 3: Final report, November 16, 1988–November 15, 1991.** Scharer, J.E. Wisconsin Univ., Madison, WI (United States). Dept. of Electrical and Computer Engineering. Jul 1991. 21p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-86ER53218. Order Number DE91019078. Source: OSTI; NTIS; INIS; GPO Dep.

The research performed under this grant during the past three years has been concentrated on the following several key tokamak ICRF (Ion Cyclotron Range of Frequencies) coupling and heating issues: efficient coupling during the L- to H-mode transition by analysis and computer simulation of ICRF antennas edge plasma profiles; analysis of both dielectric-filled waveguide and coil ICRF antenna coupling to plasma edge profiles; benchmarking the codes to compare with current JET, D-IIID and ASDEX experimental results; ICRF full-wave field solutions, power conservation and heating analyses; and the effects of fusion alpha particle or ion tail populations on the ICRF absorption. Research progress, publications, and conference and workshop presentations are summarized in this report. 15 refs.

8231 (DOE/ER/53218-19) **Transport Task Force Leadership, Task 4: Final report, November 16, 1990–November 15, 1991.** Callen, J.D. Wisconsin Univ., Madison, WI (United States). Dept. of Nuclear Engineering and Engineering Physics. Jul 1991. 6p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-86ER53218. Order Number DE91019082. Source: OSTI; NTIS; INIS; GPO Dep.

The Transport Task Force (TTF) was initiated as a broad-based US magnetic fusion community activity during the fall of 1988 to focus attention on and encourage development of an increased understanding of anomalous transport in tokamaks. The overall TTF goal is to make progress on Characterizing, Understanding and Identifying how to Reduce plasma transport in tokamaks – to CUIR transport.

8232 (DOE/ER/53269-4) **Methods for testing transport models: Second year annual report.** Singer, C.; Cox, D. Illinois Univ., Urbana, IL (United States). 14 Nov 1991. 15p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-88ER53269. Order Number DE92004489. Source: OSTI; NTIS; INIS; GPO Dep.

Substantial progress has been made over the past year on six aspects of the work supported by this grant. As a result, we have in hand for the first time a fairly complete set of transport models and improved statistical methods for testing them against large databases. We also have initial results of such tests. These results indicate that careful application of presently available transport theories can reasonably well produce a remarkably wide variety of tokamak data.

8233 (DOE/ET/53088-519) **1991 US-Japan workshop on Nuclear Fusion in Dense Plasmas: Proceedings.** Ichimaru, S. (ed.) (Tokyo Univ. (Japan). Dept. of Physics); Tajima, T. (ed.). Texas Univ., Austin, TX (United States). Inst. for Fusion Studies. Oct 1991. 67p. Sponsored by U.S. DOE Energy Research. DOE Contract FG05-80ET53088. (IFSR-519;CONF-9110119-: US-Japan workshop on nuclear fusion in dense plasmas, Austin, TX (United States), 7-9 Oct 1991). Order Number DE92004646. Source: OSTI; NTIS; INIS; GPO Dep.

The scientific areas covered at the Workshop may be classified into the following subfields: (1) basic theory of dense plasma physics and its interface with atomic physics and nuclear physics; (2) physics of dense z-pinches, ICF plasmas etc; (3) stellar interior plasmas; (4) cold fusion; and (5) other dense plasmas.

8234 (DOE/ET/53088-524) **Neoclassical diffusion in a turbulent plasma.** Yushmanov, P. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst.

Atomnoj Ehnergii). Texas Univ., Austin, TX (United States). Inst. for Fusion Studies. Nov 1991. 22p. Sponsored by U.S. DOE Energy Research. DOE Contract FG05-80ET53088. (IFSR–524). Order Number DE92004248. Source: OSTI; NTIS; INIS; GPO Dep.

This work describes a new approach to plasma transport where the toroidal drift motion is considered as a perturbation to the fluctuating velocity. Percolation theory is used to determine the scaling of the diffusion coefficient. Several neoclassical phenomena should persist even when diffusion is enhanced from neoclassical predictions. Numerical simulation results support the theoretical scaling arguments.

8235 (DOE/ET/53088–525) **Self-consistent radial sheath in ignited plasmas.** Xiao, H. (Texas Univ., Austin, TX (United States)); Hazeltine, R.D.; Carrera, R. Texas Univ., Austin, TX (United States). Inst. for Fusion Studies. Nov 1991. 13p. Sponsored by U.S. DOE Energy Research. DOE Contract FG05-80ET53088. (IFSR–525). Order Number DE92004251. Source: OSTI; NTIS; INIS; GPO Dep.

The radial sheath in ignited plasmas is studied based on the self-consistent effects of alpha particle's guiding-center orbits and E x B-induced toroidal rotation. The slowing-down alpha particle distribution determines the structure of the radial sheath through finite Larmor radius effects.

8236 (DOE/ET/53088–526) **Edge turbulence scaling with shear flow.** Zhang, Y.Z.; Mahajan, S.M. Texas Univ., Austin, TX (United States). Inst. for Fusion Studies. Nov 1991. 10p. Sponsored by U.S. DOE Energy Research. DOE Contract FG05-80ET53088 ;FG05-88ER53266. (IFSR–526). Order Number DE92004249. Source: OSTI; NTIS; INIS; GPO Dep.

A formula relating turbulence levels with arbitrary shear flow is derived. When the diffusion coefficient is made a functional of the corresponding turbulence level, it is found that the scaling laws governing turbulence suppression are considerably modified. The results are compared with known formulas in various limiting cases, indicating that turbulence suppression mainly pertains in the moderate shear flow regime. The results also show that a flattened (steep) radial equilibrium gradient tends to enhance (eliminate) turbulence suppression due to the shear flow. 12 refs., 1 fig.

8237 (DOE/ET/53088–527) **Toroidal kinetic η_i-mode study in high temperature plasmas.** Dong, J.Q., Horton, W.; Kim, J.Y. Texas Univ., Austin, TX (United States). Inst. for Fusion Studies. Nov 1991. 32p. Sponsored by U.S. DOE Energy Research. DOE Contract FG05-80ET53088. (IFSR–527). Order Number DE92004252. Source: OSTI; NTIS; INIS; GPO Dep.

A new kinetic integral equation for the study of the ion temperature gradient driven mode in toroidal geometry is developed that includes the ion toroidal (curvature and magnetic gradient) drift motion ω_D, the mode coupling from finite $\kappa_{||}$ due to the toroidal feature of the sheared magnetic configuration. The integral equation allows the stability study for arbitrary $\kappa_{||}\ v_i/(\omega - \omega_D)$ and $\kappa\perp\rho_i$. A systematic parameter study is carried out for the low β circular flux surface equilibrium. Possible correlations between the unstable mode characteristics and some experimental results such as fluctuation spectrum and anomalous ion transport measurements are discussed.

8238 (DOE/ET/53088–531) **Existence and damping of toroidicity-induced Alfven eigenmodes.** Mahajan, S.M.; Mett, R.R. Texas Univ., Austin, TX (United States). Inst. for Fusion Studies. Dec 1991. 15p. Sponsored by U.S. DOE Energy Research. DOE Contract FG05-80ET53088. (IFSR–531). Order Number DE92004250. Source: OSTI; NTIS; INIS; GPO Dep.

A new method of analyzing the toroidicity-induced Alfven eigenmode (TAE) from kinetic theory is presented. The analysis includes electron parallel dynamics non-perturbatively, an effect which is found to strongly influence the character and damping of the TAE – contrary to previous theoretical predictions. The normal electron Landau damping of the TAE is found to be higher than previously expected, and may explain recent experimental measurements of the TAE damping coefficient. 11 refs., 1 fig., 1 tab.

8239 (ENEA-RT-NUCL–90-04) **Contributions to 17th EPS conference on controlled fusion and plasma heating.** ENEA, Frascati (Italy). Area Nucleare. 1990. 60p. (CONF-900602–: 17. European Physical Society (EPS) conference on controlled fusion and plasma heating, Amsterdam (Netherlands), 25-29 Jun 1990; RT/NUCL–90-04). Order Number DE92743986. Source: OSTI; NTIS (US Sales Only).

From 17th EPS conference on controlled fusion and plasma heating; Amsterdam, Netherlands (25-29 Jun 1990).

In this report studies on controlled fusion and plasma heating are reported. The principal contributions are the following: long wavelength limit of temperature gradient mode in tokamak plasma; feasibility of diagnostics of JET LHCD plasma; propagation, absorption and particle dynamics of ion-Bernstein wave in tokamaks; plasma productions and conditions; plasma behaviour in FT Tokamak; modelling of interaction of energetic ions with lower hybrid waves on JET; production, power absorption, energy confinement in ASDEX; JET time of flight neutral particle analyser; energy confinement scaling laws for FT Ohmic plasma.

The interaction of LH waves with JET (Joint European Torus) plasma is expected to develop a high energy tail in the electron distribution function. X-ray line emission from highly ionized impurities in the plasma can provide a means to measure the fractional density in the suprathermal electrons. The principle of this measurement, already successfully carried out on the FT tokamak, relies on the relative increase in brightness of a collisionally exited electric dipole transition, as for example, the resonance line of He-like ions, and on the observation that, for medium z ions, the impact cross section is fairly constant over the energy range of the fast electrons. In the paper, the applicability of this method for diagnosing suprathermal tails in JET plasma is discussed. The general conditions under which a measurement of the suprathermal component fractional density and its localization is expected to be feasible are defined. The set-up of the crystal spectrometers available at JET is outlined.

8241 (ENEA-RT-NUCL–90-04, pp. 57-60) **Energy confinement scaling laws for FT ohmic plasma.** Bracco, G.; Buratti, P.; Orsitto, F.; Santi, D. ENEA, Frascati (Italy). Area Nucleare. 1990. (CONF-900602–: 17. European Physical Society (EPS) conference on controlled fusion and plasma heating, Amsterdam (Netherlands), 25-29 Jun 1990). In *Contributions to 17th EPS conference on controlled fusion and plasma heating.* 60p. Order Number DE92743986. Source: OSTI; NTIS (US Sales Only).

From 17th EPS conference on controlled fusion and plasma heating; Amsterdam, Netherlands (25-29 Jun 1990).

This paper describes the development of a FT (Frascati tokamak) energy confinement data base which includes ohmic plasma results for magnetic fields in the range 2.5 to 10 T; line averaged density, from 1 to $30x10^{19}$m-3; q values, from 2.5 to 6.5; and for deuterium, hydrogen and helium working gases. The base data refers to plasma pulses of 1988-1989 operation. The paper considers only deuterium discharges which form the bulk of plasma pulses. The plasma major radius is 0.83 m, and minor radius is 0.20 m. The resulting global confinement time is compared with several standard scaling laws.

8242 (ENEA-RT-NUCL–90-04, pp. 49-52) **Power absorption and energy confinement during LH injection in ASDEX.** Bartiromo, R.; Leuterer, F.; Soldner, F.X.; Murmann, H.; Team, L.H. ENEA, Frascati (Italy). Area Nucleare. 1990. (CONF-900602–: 17. European Physical Society (EPS) conference on controlled fusion and plasma heating, Amsterdam (Netherlands), 25-29 Jun 1990). From 17th EPS conference on controlled fusion and plasma heating; Amsterdam, Netherlands (25-29 Jun 1990).

Physical conditions which are not typical of usual tokamak operation can be realized by driving the plasma current with LH waves. The ohmic heating power can be reduced to zero together with the toroidal electric field. The temperature and current profile are not linked by Spitzer resistivity and the shape of these profiles can be varied by changing the current drive spectrum of the LH waves. It is therefore interesting to study the transport properties of the plasma in these conditions in order to gain some insight on the underlying physical mechanism. This paper reports on such a study on the tokamak Asdex which has already a solid data base on confinement for OH, NI and ICRH discharges. The radiofrequency system used in the experiment has been already described elsewhere. Here, attention is focussed on energy confinement. Particle transport is described in a companion paper at this conference.

8243 (ENEA-RT-NUCL–90-04, pp. 53-56) **JET time of flight neutral particle analyser.** Betello, G.; Bracco, G.; Moleti, A.; Tilia, B.; Zanza, V. ENEA, Frascati (Italy). Area Nucleare. 1990. (CONF-900602–: 17. European Physical Society (EPS) conference on controlled fusion and plasma heating, Amsterdam (Netherlands), 25-29 Jun 1990). In *Contributions to 17th EPS conference on controlled fusion and plasma heating.* 60p. Order Number DE92743986. Source: OSTI; NTIS (US Sales Only).

From 17th EPS conference on controlled fusion and plasma heating; Amsterdam, Netherlands (25-29 Jun 1990).

Neutral particle analysis provide a detailed measurement of the ion energy distribution function which can not be obtained by other diagnostics, together with information on neutral density. Standard neutral particle analysers have shown to be sensitive to the high neutron fluxex produced in the high temperature deuterium plasma of large tokamaks such as JET. The application of the coincidence technique can provide an effective way to discriminate the proper neutral signal from a random background. At the same time, it can be used to measure the particle time of flight. This paper describes the JET neutral particle analyser, with mass rejection capability and low random background sensitivity, which was developed and fully calibrated in the energy range between 0.5 and 200 KeV for hydrogen, deuterium and helium neutrals.

8244 (ENEA-RT-NUCL–90-04, pp. 45-48) **Impurity transport and production in lower hybrid discharges in ASDEX.** De Angelis, R. ENEA, Frascati (Italy). Area Nucleare. 1990. (CONF-900602–: 17. European Physical Society (EPS) conference on controlled fusion and plasma heating, Amsterdam (Netherlands), 25-29 Jun 1990). In *Contributions to 17th EPS conference on controlled fusion and plasma heating.* 60p. Order Number DE92743986. Source: OSTI; NTIS (US Sales Only).

From 17th EPS conference on controlled fusion and plasma heating; Amsterdam, Netherlands (25-29 Jun 1990).

During lower hybrid (LH) heating and current drive (CD) operation with ASDEX, an experiment was performed to determine how the wave injection affected impurity production in different base plasmas and coupling regimes. The study focussed on scaling with power and the wave spectrum, comparing other heating methods used on ASDEX, and assessing the possibility that the large number of fast electrons involved in the LH operation could have some influence on the impurity release from the wall. It was found that the impurity content during LH operation has an almost linear dependence on the total power given to the plasma. In the case of low density, current drive operation, the impurity signals resulted smaller than in ohmic discharges with equal input power. Finally, the large slide-away production observed in current driven plasmas at low LH power was not accompanied by an increase of impurity signals. From this observation, it was concluded that there is no significant impurity production concomitant with slide-away electron bombardment of the neutralizer plate or wall material.

8245 (ENEA-RT-NUCL–90-04, pp. 37-40) **Interaction of energetic ions with lower hybrid waves on JET: 1-D model.** Barbato, E. ENEA, Frascati (Italy). Area Nucleare. 1990. (CONF-900602–: 17. European Physical Society (EPS) conference on controlled fusion and plasma heating, Amsterdam (Netherlands), 25-29 Jun 1990). From 17th EPS conference on controlled fusion and plasma heating; Amsterdam, Netherlands (25-29 Jun 1990).

Ion tails up to several MeV are generated and confined in the Jet plasma during ion cyclotron heating (ICRH) experiments. When injecting lower hybrid radiofrequency (LHRF) power at 3.7 GHz, such ions interact with LH waves limiting the current drive efficiency of the LH system. To study this problem a 1-D model (in the velocity space) for the wave-ions interaction was developed, includes, besides collisional diffusion and drag, the quasilinear LH and ICRF diffusion terms. To calculate the competition in the absorption between electrons and ions, this model was coupled to a deposition code for LH waves. In section 1 of this paper, the 1-D model and the deposition code are presented. Section 1 is devoted to the discussion of the numerical results. The study shows that the effect of LH waves on the ion distribution function (DF) (which remains mainly distorted by the ICRF waves) is to flatten the DF close to the resonant region. The temperature outside such region is dominated by the ICRF term.

8246 (ENEA-RT-NUCL–90-04, pp. 33-36) **Edge plasma behaviour: FT tokamak.** Pericoli Ridolfini, V. ENEA, Frascati (Italy). Area Nucleare. 1990. (CONF-900602–: 17. European Physical Society (EPS) conference on controlled fusion and plasma heating, Amsterdam (Netherlands), 25-29 Jun 1990). In *Contributions to 17th EPS conference on controlled fusion and plasma heating.* 60p. Order Number DE92743986. Source: OSTI; NTIS (US Sales Only).

From 17th EPS conference on controlled fusion and plasma heating; Amsterdam, Netherlands (25-29 Jun 1990).

With the FT tokamak it is possible to study the scrape-off lawer (SOL) plasma with densities and power flux densities which are higher, and therefore more reactore relevant, than in other tokamaks. That is of special importance due to the well established link between the SOL and the main plasma and for other key questions as the wall or limiter power loading and the impurity influx in a reactor. This study wants to give scaling laws for the principal SOL parameters, density and temperature at the limiter radius, of their e-folding lengths, and to describe the response of the SOL plasma to lower hybrid (LH) power injection.

8247 (ENEA-RT-NUCL–90-04, pp. 29-32) **Solitary vortex solution of nonlinear Eta$_i$-mode equations.** Hong, B.G.; Romanelli, F.; Ottaviani, M. ENEA, Frascati (Italy). Area Nucleare. 1990. (CONF-900602–: 17. European Physical Society (EPS) conference on controlled fusion and plasma heating, Amsterdam (Netherlands), 25-29 Jun 1990). In *Contributions to 17th EPS conference on controlled fusion and plasma heating.* 60p. Order Number DE92743986. Source: OSTI; NTIS (US Sales Only).

From 17th EPS conference on controlled fusion and plasma heating; Amsterdam, Netherlands (25-29 Jun 1990).

Drift wave instabilities driven to the ion temperature gradient Eta$_i$-mode play an important role in explaining anomalous transport in tokamak experiments. Several studies have been made in order to assess up to which extent the experimentally observed anomalous transport is correlated to the properties of turbolent drift wave spectra. In particular, recent 2-D numerical simulations of the Eta$_i$-mode show that long-lived, large scale coherent structures exist and considerably affect the level of magnitude of anomalous transport. A significant reduction of the turbolent heat flux with respect to the quasilinear estimate and positive dependence on dissipations is indeed observed. This work addresses the question whether the Eta$_i$-mode nonlinear equations admit such a coherent solution. In the cold ion limit and slab model, the nonlinear drift wave equation (Hasegawa-Mima equation) have stationary solitary vortex solutions. These solutions correspond to a coherent fluid motion with vanishing anomalous thermal flux.

8248 (ENEA-RT-NUCL–90-04, pp. 25-28) **Bulk ion temperature measurement on JET by means of collective scattering of gyrotron radiation: Feasibility studies.** Orsitto, F. ENEA, Frascati (Italy). Area Nucleare. 1990. (CONF-900602–: 17. European Physical Society (EPS) conference on controlled fusion and plasma heating, Amsterdam (Netherlands), 25-29 Jun 1990). In *Contributions to 17th EPS conference on controlled fusion and plasma heating.* 60p. Order Number DE92743986. Source: OSTI; NTIS (US Sales Only).

From 17th EPS conference on controlled fusion and plasma heating; Amsterdam, Netherlands (25-29 Jun 1990).

In the proposal for a Thomson scattering diagnostic of fast ions and alpha particles in JET, using a gyrotron (Lambda$_0$ = 0.214 cm), the possibility of measuring the plasma ion temperature was considered briefly, and a preliminary conclusion was that the signal-to-noise in this type of experiment should be large enough, provided plasma turbolence effects do not affect the spectrum. This report discusses the possibility of the measurement of the bulk ion feature in detail, because the proposed diagnostic could give detailed information on the ion dynamics through the measurement of the spatial ion temperature profile, possibly resolved in time. The predicted error on the ion temperature as measured by this diagnostic is of the order of 15%, the spatial resolution should be a few cm, and the temporal resolution is of the order of 10 ms. The recent results of the Lausanne collective scattering experiment give concrete support to these ideas, because the general understanding is that the theory at our disposal and the signal-to-noise ratio evaluation are in broad agreement with the experimental findings, at least in conditions in which strong refractive effects are not present.

8249 (ENEA-RT-NUCL–90-04, pp. 21-24) **Profile consistency coupled with MHD equilibrium extended to non-stationary plasma conditions.** Micozzi, P.; Roccella, M. ENEA, Frascati (Italy). Area Nucleare. 1990. (CONF-900602–: 17. European Physical Society (EPS) conference on controlled fusion and plasma heating, Amsterdam (Netherlands), 25-29 Jun 1990). In *Contributions to 17th EPS conference on controlled fusion and plasma heating.* 60p. Order Number DE92743986. Source: OSTI; NTIS (US Sales Only).

From 17th EPS conference on controlled fusion and plasma heating; Amsterdam, Netherlands (25-29 Jun 1990).

A profile consistency, based on the parallel component of the ohmic law coupled with MHD equilibrium, was need to obtain electron temperature profiles, both for stationary and non-stationary tokamak plasmas. The ohmic law contains a resistive neoclassical term and one term that accounts for the bootstrap current contribution. A numerical code was developed to solve the problem in which the equilibrium is solved using the toroidal multiple method. For stationary plasmas, temperature profiles close to the experimental data were obtained for a lot of machines very different in size, elongation, plasma current, toroidal field and density (JET, TFTR, Asdex, Alcator-A, Alcator-C and FT). Only some examples of the obtained fits are given in this report. The main feature of the model is the capability to provide a parametization of the ohmic law also in none stationary cases. In agreement with some experimental evidence, the model foresees a strong peaking of the temperature profile in non-stationary plasma only when the central value of q is decreasing in time.

8250 (ENEA-RT-NUCL–90-04, pp. 17-20) **Propagation absorption and particle dynamics of ion-Bernstein wave in tokamaks.** Cardinali, A.; Cesario, R.; De Marco, F. ENEA, Frascati (Italy). Area Nucleare. 1990. (CONF-900602–: 17. European Physical Society (EPS) conference on controlled fusion and plasma heating, Amsterdam (Netherlands), 25-29 Jun 1990). In *Contributions to 17th EPS conference on controlled fusion and plasma heating.* 60p. Order Number DE92743986. Source: OSTI; NTIS (US Sales Only).

From 17th EPS conference on controlled fusion and plasma heating; Amsterdam, Netherlands (25-29 Jun 1990).

Direct launch of ion Bernstein waves has been considered in these last years as an alternative method for heating directly the ions in the central region of tokamak plasma. Many experiments have been successfully performed, in particular, that of PLT and Alcator, where a large amount of power has coupled with a loop antenna to the plasma. The coupling characteristics of the waveguide antenna, to be used on the Frascati Tokamak Upgrade (FTU) at a frequency of 433 MHz, were discussed elsewhere. They are very similar to that of the lower hybrid wave coupling. For a plasma density typical of the FTU, and for the above mentioned frequency, the LH resonance layer is located inside but in the very edge of the plasma. Hence the mode transformation from electron plasma to ion Bernstein wave is expected to happen near the plasma edge and for very low density and temperature. In order to study the wave propagation and absorption of the IB mode, the complex dispersion equation is solved in the complex domain of the wave number in the slab geometry.

8251 (ENEA-RT-NUCL–90-04, pp. 13-16) **Parametric decay instabilities studies in Asdex.** Cardinali, A.; Cesario, R.; Paoletti, F.; Pericoli Ridolfini, V. ENEA, Frascati (Italy). Area Nucleare. 1990. (CONF-900602–: 17. European Physical Society (EPS) conference on controlled fusion and plasma heating, Amsterdam (Netherlands), 25-29 Jun 1990). In *Contributions to 17th EPS conference on controlled fusion and plasma heating.* 60p. Order Number DE92743986. Source: OSTI; NTIS (US Sales Only).

From 17th EPS conference on controlled fusion and plasma heating; Amsterdam, Netherlands (25-29 Jun 1990).

A search for some possible effects of parametric decay instabilities (PDI) on LH current drive and heating was conducted on Asdex through the analysis of the signal collected by a RF probe located in the scrape-off layer plasma. The frequency spectrum, whose shape is unaffected by the position of the probe, was characterized by two parameters: the width of 2.45 GHz pump line at -10db from maximum spectral broadening and the intensity of the first satellite, downshifted in frequency from the pump by one ion cyclotron frequency evaluated at the torus outer edge. The study indicated that a well defined threshold both of Plh and line averaged density exists for the onset of the first satellite. Its density first grows exponentially with Phl, then saturates. Before saturation it decreases considerably if either Ip or Bt are raised. The threshold power drops rapidly with line average density. The growth of these instabilities is determined by the conditions of the edge plasma, density and temperature, the coupled power and by the convective losses, determined in turn, by the grill dimensions.

8252 (ENEA-RT-NUCL–90-13) **Absorption of lower hybrid waves by fast ions.** Barbato, E. ENEA, Frascati (Italy). Dipt. Fusione. 1991. 11p. (RT/NUCL–90-13). Order Number DE92744004. Source: OSTI; NTIS (US Sales Only).

The LHCD (Lower Hybrid Current Drive) at 3.7 GHz experiment, scheduled to be carried out with the JET (Joint European Torus), will test the ability of LH waves to reach the central region of a high temperature elongated plasma and, at the same time, will show to which extent fast ions absorb the LH power. Ion tails up to few MeV are generated and confined in the JET plasma during Ion Cyclotron Heating (ICH) experiments. !ons of such energy can interact with LH waves at 3.7 GHz at the JET working density. These ions are located in the region where the IC wave (ICW) power is deposited. If the interaction between fast ions and LH waves occurs and is detectable, the LHW deposition profile could be studied, by varying the ICW deposition profile, and the absorption capability of fast ions could be analyzed, thus allowing extrapolation to future devices. With this aim, a Fokker-Planck (FP) 1-D model (in the velocity space) of the LHW-ion interaction is considered. It includes both the quasi-linear (QL) LHW and ICW diffusion terms. This model is coupled to a deposition code for LHW to study the competition in the absorption between ions and electrons. The maximum absorption capability by the minority ions is found by varying the plasma parameters, the minority concentration, and mass and the RF power levels.

8253 (ENEA-RT-NUCL–90-29) **Sawtooth repetition time scaling from reduced MHD simulations: Comparison with FT experiment.** Vlad, G.; Bracco, G.; Buratti, P. ENEA, Frascati (Italy). Area Nucleare. Sep 1991. 16p. (RT/NUCL–90-29). Order Number DE92744033. Source: OSTI; NTIS (US Sales Only).

The proposed scaling of the sawtooth repetition time for ohmic discharges was obtained by reduced magnetohydrodynamic (MHD) equation simulations together with a simple profile consistent transport model. The choice of a profile consistent perpendicular thermal diffusion coefficient allowed the obtaining of the scaling of the sawtooth repetition time in terms of the diffusion coefficients and edge safety factor (q_a), thus generalizing the scaling given by Vlad and Bondeson (Nucl. Fusion 29, 1139 (1989)). The scaling was in excellent agreement with the ohmic results of the Frascati Tokamak (FT).

8254 (ENEA-RT-NUCL–90-37) **Non-resonant electron velocity diffusion by lower hybrid waves in tokamaks.** Santini, F. ENEA, Frascati (Italy). Dipt. Fusione. Jun 1991. 24p. (RT/NUCL–90-37). Order Number DE92744009. Source: OSTI; NTIS (US Sales Only).

On the basis of the quasi-linear theory of tokamak current drive by lower hybrid waves, a velocity diffusion process is introduced for electrons that are not Landau resonating with the waves. This effect is connected to the time dependence of the wave field autocorrelations which can be determined by non-linear terms (only postulated here) or by the geometric effect of a sharp wave beam of finite toroidal width. In both cases, the role of non-resonant electron velocity diffusion is important in evaluating the driven current and the absorbed power correctly (as it may fill the gap in velocity space between bulk and resonant tail electrons). It also implies the presence of a fast REF-runaway electron tail above the Landau resonance. This tail requires a treatment which includes relativistic effects, as well as, 2-D velocity space and cross field transport of fast electrons, but preliminary considerations indicate that it does not depend much on the wave spectrum (or on the accessibility limit). Finally, the temperature scaling of the current drive efficiency is found to be different from the classical result obtained in the usual quasi-linear theory.

8255 (ENEA-RT-NUCL–90-39) **Tokamak plasmas: 1-D modelling.** Romanelli, F.; Nocentini, A. ENEA, Frascati (Italy). Area Nucleare. Jun 1991. 30p. (RT/NUCL–90-39). Order Number DE92744027. Source: OSTI; NTIS (US Sales Only).

An analysis is presented of a microinstability based model of anomalous transport which accounts for the effect of trapped electron dynamics and ion temperature gradients. A comparison with the experimental results obtained with the FT, TFTR and ASDEX tokamaks shows good agreement for the case of ohmic or moderate auxiliary heating; while in the case of strong auxiliary heating, results comparison shows that the convective part of the electron heat flux can be overestimated.

8256 (ENEA-RT-NUCL–90-40) **Analysis of satured ohmic confinement in FT tokamak.** Alladio, F.; Apruzzese, G.; Barbato, E.; Bardotti, G.; Bartiromo, R.; Berton, F.; Bombarda, F.; Bracco, G.; Briguglio, S.; Buceti, G. ENEA, Frascati (Italy). Dipt. Fusione. May 1991. 11p. (CONF-901025–48: 13. international conference on plasma physics and controlled nuclear fusion research, Washington, DC (United States), 1-6 Oct 1990; RT/NUCL–90-40). Order Number DE92744001. Source: OSTI; NTIS (US Sales Only).

From 13. International conference on plasma physics and controlled nuclear fusion research; Washington, USA (1-6 Oct 1990).

The energy confinement time for ohmically heated discharges in the FT (Frascati, Italy) tokamak was studied in a wide range of plasma parameters. It was found to increase linearly with the line averaged density below a value of $1x10^{14}$ per cubic centimeter and to saturate at higher densities. Analysis of the experimental data showed that, at the same density at which saturation was reached, the effective charge state became nearly equal to 1, and the electron and ion temperatures became nearly equal. The saturated energy confinement time showed a strong isotope effect with a reduction factor of 1.5 when operating in hydrogen. The sawtooth period was closely correlated with energy confinement time and displayed the same saturated behaviour and isotope effect. The ion thermal diffusivity was found to be compatible with neoclassical theory up to the maximum density, but a neoclassical multiplier of 3 would only fit the highest line averaged density data. The electron thermal diffusivity first decreased with the inverse of line averaged density, but remained nearly constant in the saturated region. Therefore, ohmic saturation in the FT seems to be primarily caused by electron transport.

8257 (GA-A–20610) **Displaying DIII-D plasma data using DEC's X window system.** Greene, K.L. General Atomics, San Diego, CA (United States). Nov 1991. 3p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-89ER51114. (CONF-910968–54: 14. IEEE symposium on fusion engineering, San Diego, CA (United States), 30 Sep - 3 oct 1991). Order Number DE92004456. Source: OSTI; NTIS; INIS; GPO Dep.

The D3-D tokamak program, funded by the Department of Energy, carries out plasma physics and fusion energy research experiments. The machine began operation in February 1986; at that time, approximately 7 Mbytes of data was collected for shot. Since that time, the shot size has steadily increased to over 50 Mbytes with the average shot size between 35 and 45 Mbytes. Shots are fired every 12 to 15 minutes and last approximately 5 to 10 seconds. Between 30 and 40 shots are fired each day when plasma experiments are scheduled. In 1987 MFITD and MFITPLAY were written/modified. These two programs provide graphical output that allows the users to see, before the next shot, the plasma shape and the locations of the plasma and magnetic flux lines within the tokamak. MFITD performs the computations which calculate the shape and location of the plasma; it also graphically displays a small subset of timeslice data. MFITPLAY graphically displays the full set of timeslice data. Through interactive commands, MFITPLAY also allows the user to control the various aspects of how the data is displayed. In 1990, both programs were converted from User Interface Services (UIS) routines, which are part of the MicroVMS workstation graphics software, to DEC's X Window System using the DECWindows window manager. These modifications were required because of a move by Digital Equipment Corporation (DEC) to support X windows and phase out UIS. Due to the nature and purpose of each program, MFITD needed only simple graphics conversion while MFITPLAY was completely rewritten. The DECWindows version of MFITPLAY offers a number of improvements, such as a more intuitive user interface.

8258 (GA-A–20619) **30-60 MHz FWCD system on DIII-D: Power division, phase control and tuning for a four-element antenna array.** Pinsker, R.I. (General Atomics, San Diego, CA (United States)); Mayberry, M.J.; Petty, C.C.; Cary, W.P.; Pusl, J.; Remsen, D.; Baity, F.W.; Goulding, R.H.; Hofmann, D.J. General Atomics, San Diego, CA (United States). Nov 1991. 3p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-89ER51114. (CONF-910968–51: 14. IEEE symposium on fusion engineering, San Diego, CA (United States), 30 Sep - 3 oct 1991). Order Number DE92004294. Source: OSTI; NTIS; INIS; GPO Dep.

The 2 MW Fast Wave Current Drive system on DIII-D is intended to provide a near-term demonstration of up to 0.3 MA of current driven by the fast wave. The system used to drive the four element phased antenna array which produces the required directional spectrum is presented. This system must be able to cope with strong coupling between antenna elements and the time-varying plasma load seen by the antennas. Computer modelling shows that this system should be able to maintain a directional spectrum at full power under most anticipated load conditions. 5 refs., 1 fig.

8259 (IAEA-TECDOC–604, pp. 23-27) **External helical coil studies on Tokoloshe tokamak.** Villiers, J.A.M. de (Atomic Energy Corp. of South Africa Ltd., Pretoria (South Africa)); Fletcher, J.D.; Nothnagel, G.; Roberts, D.E.; Sherwell, D. International Atomic Energy Agency, Vienna (Austria). May 1991. (CONF-9009463–: Technical committee on research using small tokamaks, Arlington, VA (United States), 27 Sep 1990). In *Research using small tokamaks: Proceedings of a technical committee meeting held in Arlington, Virginia, USA, 27-28 September 1990.* 198p. Order Number DE92615416. Source: OSTI; NTIS (US Sales Only); INIS.

Tokoloshe is a low aspect ratio tokamak (R/a=0.52m/0.24m) with a maximum possible toroidal field of 1.2 T. Due to the low aspect ratio, peak plasma currents of I_p < or approx. 150 kA can be obtained at $B_\phi \simeq 0.6$ T. The discharge duration is typically < or approx. 40 ms when it is terminated by a major disruption due to strong gas puffing. Line average densities generally reach peak values of around $6x10^{13}cm^{-3}$. Central electron temperatures range from 550 eV early in the discharge to about 350 eV just before the disruption with a typical $Z_{eff} \simeq 2$. The machine is fitted with 4 sets of windings for detailed studies of the stability and confinement of tokamak plasmas. The work originally started with a pure poloidal winding (l=m/n=0/1) within the limiter. Pulses yielding a maximum axial perturbation of the toroidal field of ±8.5% were possible. Subsequently, 3 sets of stellarator type helical windings (l=1,2 and 3) were fitted on the outside of the vacuum chamber. These conformed to a general winding law of ϕ=m/n(θ-$\delta_{m/n}$sinθ) (with $\delta_{m/n}$=40, 48 and 0 degrees respectively for l=m/n=1/1,2/1 and 3/1) except for local deviations around ports and major protrusions. The δ-values were chosen initially to minimize contributions to m/n=3/1 islands. Subsequent comparison of the calculated mode spectra with those derived from vacuum field measurements confirmed the design expectations. In practice these 3 sets of windings can be driven individually or in pairs with peak current pulses of approximately 9, 6 and 5 kA respectively. The pulse rise times are about 1 ms and pulse widths are adjustable from a few ms to 10 ms or more with a falling amplitude due to resistive decay. (author). 7 refs, 5 figs.

8260 (IAEA-TECDOC–604, pp. 79-84) **Transport phenomena in pellet injection experiments on JIPP T-IIU tokamak.** Ogawa, Y. (National Inst. for Fusion Science, Nagoya (Japan)); Sakamoto, M.; Sato, K.N.; Kawahata, K.; Hirokura, S.; Okajima, S. JIPP T-IIU Group. International Atomic Energy Agency, Vienna (Austria). May 1991. (CONF-9009463–: Technical committee on research using small tokamaks, Arlington, VA (United States), 27 Sep 1990). In *Research using small tokamaks: Proceedings of a technical committee meeting held in Arlington, Virginia, USA, 27-28 September 1990.* 198p. Order Number DE92615416. Source: OSTI; NTIS (US Sales Only); INIS.

Transport phenomena associated with pellet injection have been intensively studied on JIPP T-IIU tokamak. When a large pellet has been injected, marked peaking of the density profile has been observed just after the hollow density profile produced by the pellet injection. This marked inward pinch of the density might suggest some instability associated with an ηi mode, since density fluctuations on the ion mode has been simultaneously observed in FIR scattering. By injecting a small pellet as a source of a density perturbation, the particle diffusion has been analyzed, and diffusion coefficients and inward pinch velocity have been derived with 1-D transport code. Next, we have studied the ultra fast cooling phenomenon (so-called pre-cooling) at the pellet ablation phase, where the propagation speed of the cooling front is extremely faster than the pellet injection speed. This pre-cooling phenomenon has been confirmed with two independent diagnostics (ECE and Soft-X-ray). The density around the plasma center has never increased during this pre-cooling, contrary to the clear decrease of the electron temperature. (author). 6 refs, 7 figs.

8261 (IAEA-TECDOC–604, pp. 85-91) **Evaluation of absolute impurity ion densities in tokamak edge plasmas by means of lithium beam-activated charge exchange spectroscopy (Li-CXS).** Aumayr, F. (Technische Univ., Vienna (Austria). Inst. fuer Allgemeine Physik); Unterreiter, E.; Winter, H.P. International Atomic Energy Agency, Vienna (Austria). May 1991. (CONF-9009463–: Technical committee on research using small tokamaks, Arlington, VA (United States), 27 Sep 1990). In *Research using small tokamaks: Proceedings of a technical committee meeting held in Arlington, Virginia, USA, 27-28 September 1990.* 198p. Order Number DE92615416. Source: OSTI; NTIS (US Sales Only); INIS.

Impurity ion concentrations in the edge plasma of tokamak discharges can be determined with excellent spatial and temporal resolution by means of lithium beam-activated charge exchange spectroscopy (Li-CXS), i.e. by utilizing electron capture from injected fast Li atoms into excited states of the impurity ions of interest, and spectroscopic observation of the resulting characteristic impurity ion line emission. First demonstration measurements of the new diagnostic method are being presented. Furthermore, we discuss important aspects regarding the practical use of Li-CXS to achieve precise information on impurity ion concentrations in tokamak edge plasmas. (1) Attenuation of the injected lithium beam has to be taken precisely taking into account. For this purpose we have developed an attenuation code which includes the excitation, deexcitation and ionisation of injected Li atoms via collisions with electrons and protons in the edge plasma environment. The attenuation can be calculated for different numbers of excited LiI states. (2) After their population by electron capture from Li, some of the resulting excited impurity ion states may become mixed due to collisions with plasma particles before radiating. Consequently, the relation between impurity ion density and characteristic line radiation intensity can deviate considerably from the one derived in experiments involving single collisions between the impurity ions of interest and Li ground state atoms. Attenuation calculations have been carried out to first evaluate measurements of C^{5+} and C^{6+} concentrations in the edge plasma of TEXTOR ohmical discharges (KFA Juelich, Germany), as will be demonstrated in the present report. Regarding the actual importance of excited level mixing, specific experiments are needed to compare our calculations with measured distributions of charge exchange-excited impurity ion states produced within typical tokamak edge plasmas. (author). 9 refs, 8 figs.

8262 (IAEA-TECDOC–604, pp. 47-60) **Energy confinement and coupling of transport process with MHD modes.** Zhang Cheng (Academia Sinica, Hefei, AH (China). Inst. of Plasma Physics); Duen Baohua; Yu Guoyang; Huo Yuping. International Atomic Energy Agency, Vienna (Austria). May 1991. (CONF-9009463–: Technical committee on research using small tokamaks, Arlington, VA (United States), 27 Sep 1990). Source: OSTI; NTIS (US Sales Only); INIS.

Starting from Tearing Mode equation, the growth rate equations of magnetic islands, the energy and particle balance equations with large effective thermoconductivity and diffusion in magnetic islands, it has been shown that the width of magnetic islands of different tearing modes and the temperature profile all oscillate with time. In some cases the oscillation frequency is the same as of the sawteeth, but in other cases it is in the range of observed Mirnov oscillations. From these equations we have calculated the energy confinement time of the plasma, and compared it with the confinement time purely due to the anomalous thermoconductivity in $q > 1$ region. The scaling laws of these two kinds of confinement time are quite different. This result shows clearly that it is impermissible to compare the experimental results directly with anomalous transport analysis, as usually done before. (author). 8 figs, 1 tab.

8263 (IAEA-TECDOC–604, pp. 61-78) **Simulation of turbulent plasma heating by the ion-ion instability and ICRH through resonant absorption in two-ion species plasma.** Demchenko, V. (International Atomic Energy Agency, Vienna (Austria). Dept. of Research and Isotopes). International Atomic Energy Agency, Vienna (Austria). May 1991. (CONF-9009463–: Technical committee on research using small tokamaks, Arlington, VA (United States), 27 Sep 1990). Source: OSTI; NTIS (US Sales Only); INIS.

Numerical simulation of current instability development and saturation in a plasma with two ion species under the relative motion of ion components transverse to the strong magnetic field are discussed. It is shown that saturation of ion-ion current instability is of strong turbulent nature. This fact is based on the generation in configuration space of non-stationary density holes (cavitons) and regular structures (vortexies) in space phase. Resonant interaction of ions with plasma waves trapped into the cavity leads to the destruction of regular structures and to the stochastic (turbulent) plasma heating. Particle simulation of two-ion hybrid cyclotron resonance heating of a magnetized hydrogen plasma with deuteron minority of FMSW launched from the low magnetic field side is presented. Depending on the minority concentration, partial transmission and partial reflection of the incoming waves off the two-ion hybrid resonance layer occur, in contrast to the mode conversion mainly taking place during incidence from the high field side. Preferential minority heating is observed, as the minority cyclotron resonance is close to the two-ion hybrid resonance layer. (author). 21 refs, figs.

8264 (IAEA-TECDOC–604, pp. 97-101) **Control of tokamak edge fluctuations.** Singh, R. (Institute for Plasma Research, Bhat, Gandhinagar (India)); Kaw, P.K.; Sen, A.; Deshpande, S.; Sen, A.K. International Atomic Energy Agency, Vienna (Austria). May 1991. (CONF-9009463–: Technical committee on research using small tokamaks, Arlington, VA (United States), 27 Sep 1990). In

Research using small tokamaks: Proceedings of a technical committee meeting held in Arlington, Virginia, USA, 27-28 September 1990. 198p. Order Number DE92615416. Source: OSTI; NTIS (US Sales Only); INIS.

This paper deals with two attractive methods which have been proposed for the control of edge fluctuations in a tokamak plasma, viz., (i) active feedback stabilization; and (ii) introduction of sheared poloidal flow. Eigenmode equations for the rippling mode, the drift-dissipative mode and the radiative condensation instability in the presence of a sheared poloidal flow and a phase sensitive feedback source have been set up and analytically solved in some limiting cases. Conditions for stabilization of the above mentioned instabilities are discussed. (author). 8 refs.

8265 (IAEA-TECDOC–604, pp. 29-33) **Discrete Alfven waves in TORTUS.** Ballico, M.J. (Sydney Univ., New South Wales (Australia). Wills Plasma Physics Dept.); Bowden, M.; Brennan, M.H.; Cross, R.C.; James, B.W. International Atomic Energy Agency, Vienna (Austria). May 1991. Source: OSTI; NTIS (US Sales Only); INIS.

Observations are presented of discrete Alfven waves in the TORTUS tokamak. The results are interpreted in terms of the measured density profiles and an inferred central q. (author). 5 refs, 2 figs.

8266 (IAEA-TECDOC–604, pp. 41-45) **The m=2 tearing mode in TEXT.** Chen, J.Y. (Academia Sinica, Hefei, AH (China). Inst. of Plasma Physics); McCool, S.C.; Wootton, A.J. International Atomic Energy Agency, Vienna (Austria). May 1991. Grant DE-FG05-88ER-53267. (CONF-9009463–: Technical committee on research using small tokamaks, Arlington, VA (United States), 27 Sep 1990). In *Research using small tokamaks: Proceedings of a technical committee meeting held in Arlington, Virginia, USA, 27-28 September 1990.* 198p. Order Number DE92615416. Source: OSTI; NTIS (US Sales Only); INIS.

In TEXT an m=2 island is seen to grow linearly in time for a wide range of island widths before it saturates. This is consistent with the Rutherford regime and implies a weak dependence of Δ' on the island width. Both experimental and numerical results show q(0) is an important parameter in the mode evolution. The frequency of the mode changes significantly during the Rutherford growth. The scaling of frequency versus island width and machine size agree with a neoclassical poloidal rotation model. The enhanced particle transport observed is consistent with edge magnetic island transport produced by the Ergodic Magnetic Limiter but an order higher than that predicted by stochastic transport mechanisms. (author). 8 refs, 5 figs.

8267 (IAEA-TECDOC–604, pp. 11-22) **The use of ECRH, LHCD and resonant helical fields to influence tokamak instabilities.** Morris, A.W. (Euratom-UKAEA Fusion Association, Abingdon (United Kingdom). Culham Lab.). International Atomic Energy Agency, Vienna (Austria). May 1991. (CONF-9009463–: Technical committee on research using small tokamaks, Arlington, VA (United States), 27 Sep 1990). In *Research using small tokamaks: Proceedings of a technical committee meeting held in Arlington, Virginia, USA, 27-28 September 1990.* 198p. Order Number DE92615416. Source: OSTI; NTIS (US Sales Only); INIS.

The control of MHD instabilities and disruptions remains a problem for future tokamaks, and a number of experiments have been performed on the DITE and COMPASS-C tokamaks to develop control techniques. A variety of tools are available on these devices: LHCD, ECRH, and external resonant magnetic perturbations (RMP) inside and outside the vessels. The last two have been operated in fast feedback loops following rotating instabilities, as well as quasi-DC. Suppression of density limit disruptions with magnetic feedback has been demonstrated, as well as control of internal modes (m=1, n=1 and the sawtooth) using RF or magnetic feedback techniques. An extensive study of the effect of static RMPs on MHD activity has been performed which together with a new theoretical model sheds light on possible mechanisms for both mode stabilisation and stimulation of disruptions by external field perturbations. (author). 13 refs, 6 figs, 3 tabs.

8268 (IAEA-TECDOC–604, pp. 35-40) **Mode - Coupling triggering mechanism in tokamak major disruptions.** Vannucci, A. (Sao Paulo Univ., SP (Brazil). Inst. de Fisica); Nascimento, I.C.; Caldas, I.L.; Gill, R.D. International Atomic Energy Agency, Vienna (Austria). May 1991. (CONF-9009463–: Technical committee on research using small tokamaks, Arlington, VA (United States), 27 Sep 1990). In *Research using small tokamaks: Proceedings of a technical committee meeting held in Arlington, Virginia, USA, 27-28 September 1990.* 198p. Order Number DE92615416. Source: OSTI; NTIS (US Sales Only); INIS.

The possible triggering mechanisms for the major disruptions in the small TBR-1 tokamak discharges and, later on, in the JET high current pulses were studied. Evidence could be found, in both cases, that the coupling of the m/n=1/1 with the other higher modes (but predominantly the m/n=2/1) are mainly responsible for triggering this instability. (author). 8 refs, 4 figs.

8269 (IAEA-TECDOC–604, pp. 103-109) **ADITYA: Initial results and status of edge control experiments.** Atrey, P.K. (and others); Bhatt, S.B.; Bora, D. ADITYA Team. International Atomic Energy Agency, Vienna (Austria). May 1991. (CONF-9009463–: Technical committee on research using small tokamaks, Arlington, VA (United States), 27 Sep 1990). In *Research using small tokamaks: Proceedings of a technical committee meeting held in Arlington, Virginia, USA, 27-28 September 1990.* 198p. Order Number DE92615416. Source: OSTI; NTIS (US Sales Only); INIS.

The initial results for ADITYA and status of edge control experiments are presented. Breakdown at low loop voltages (approx. 15V), peak currents up to 50 kA and discharge duration of 22 ms have been achieved at nominal operating parameters. The studies on the convective losses preceding the formation of rotational transform indicate that convection plays a more significant role than error magnetic fields in ADITYA. The current termination shows a sequence of positive spikes and decrease in plasma current until the external applied vertical magnetic field overcompensates the hoop force and causes a crashing of current channel towards inboard side of vacuum vessel. (author). 7 refs, 6 figs.

8270 (IAEA-TECDOC–604, pp. 117-122) **Potential formation in a tokamak plasma by limiter biasing and its effect on confinement properties.** Uesugi, Y. (Nagoya Univ. (Japan). Faculty of Engineering); Takamura, S.; Yamakawa, Y. International Atomic Energy Agency, Vienna (Austria). May 1991. (CONF-9009463–: Technical committee on research using small tokamaks, Arlington, VA (United States), 27 Sep 1990). In *Research using small tokamaks: Proceedings of a technical committee meeting held in Arlington, Virginia, USA, 27-28 September 1990.* 198p. Order Number DE92615416. Source: OSTI; NTIS (US Sales Only); INIS.

It is observed in HYBTOK-II tokamak that a negative change of the electric potential by negative limiter biasing is dependent sensitively on the magnetic configuration in the scrape-off region while the positive change is not. In the positive biasing the plasma potential increases in proportion to the bias voltage and enhances the radial electric field at the edge. On the other hand the plasma potential does not decrease deeply in the negative biasing. The positive radial electric field enhanced by the positive biasing seems to improve the particle confinement associated with a stabilization of the magnetic and electrostatic fluctuations. (author). 5 refs, 6 figs, 1 tab.

The magnitude of the radial electric field and its role in the improved confinement regimes are examined in situations mainly relevant to small tokamaks. (author). 7 refs.

8272 (IAEA-TECDOC–604, pp. 175-179) **Eccentric operation modes in small tori and their physics.** Yoshida, Z. (Tokyo Univ. (Japan). Faculty of Engineering); Inoue, N.; Fujita, T. International Atomic Energy Agency, Vienna (Austria). May 1991. (CONF-9009463–: Technical committee on research using small tokamaks, Arlington, VA (United States), 27 Sep 1990). In *Research using small tokamaks: Proceedings of a technical committee meeting held in Arlington, Virginia, USA, 27-28 September 1990.* 198p. Order Number DE92615416. Source: OSTI; NTIS (US Sales Only); INIS.

Some different eccentric operation modes have been tried on small tori. These experiments are aimed at understanding strongly nonlinear processes in tokamak-type discharges with enhancing and extending their anomaly. In the ultra low q ($q < 1$) discharges, anomalous ion heating has been observed. The discharge is self-stabilized against kink instabilities through MHD relaxation process. Intense runaway discharges have been also studied to highlight the dynamics of high energy beam component in a tokamak type equilibrium. (author). 13 refs, 5 figs.

8273 (IAEA-TECDOC–604, pp. 143-146) **Multichord time resolved plasma radiation measurements with combination of absorber foils and microchannel plate on MT-1 tokamak.** Kardon, B. (Hungarian Academy of Sciences, Budapest (Hungary). Central Research Inst. for Physics); Bakos, J.S.; Buerger, G.; Kalvin, S.; Petravich, G.; Veres, G.; Zoletnik, S. International Atomic Energy Agency, Vienna (Austria). May 1991. (CONF-9009463–: Technical committee on research using small tokamaks, Arlington, VA (United States), 27 Sep 1990). In *Research using small tokamaks: Proceedings of a technical committee meeting held in Arlington, Virginia, USA, 27-28 September 1990.* 198p. Order Number DE92615416. Source: OSTI; NTIS (US Sales Only); INIS.

Absorber foils have been used with combination MCP (microchannel plate) detector for the measurements of soft and ultrasoft X-ray radiation of tokamak plasma with 2 μsec time resolution along 12 chords covering 2/3 of the plasma minor radius. Usefulness of such diagnostics has been demonstrated. (author). 5 refs, 4 figs.

8274 (IAEA-TECDOC–604, pp. 131-135) **Radial particle transport due to the turbulent and quasi-stationary cross field drift on the CASTOR tokamak.** Stoeckel, J. (Institute of Plasma Physics, Prague (Czechoslovakia)); Zacek, F.; Jakubka, K.; Kryska, L.; Dvoracek, L.; Pech, P.; Sachtleben, J. International Atomic Energy Agency, Vienna (Austria). May 1991. (CONF-9009463–: Technical committee on research using small tokamaks, Arlington, VA (United States), 27 Sep 1990). Source: OSTI; NTIS (US Sales Only); INIS.

The relative importance of the turbulent and quasi-stationary cross field drift induced particle transport and their poloidal asymmetries are experimentally investigated at low density discharges on the CASTOR tokamak. (author). 6 refs, 3 figs.

8275 (IAEA-TECDOC–604, pp. 111-115) **Edge studies, helicity current drive and diagnostic development on the Phaedrus-T tokamak.** Breun, R. (Wisconsin Univ., Madison, WI (United States). Dept. of Nuclear Engineering and Engineering Physics); Fonck, R.; Hershkowitz, N. International Atomic Energy Agency, Vienna (Austria). May 1991. Grant DE-FG02-88ER53264. (CONF-9009463–: Technical committee on research using small tokamaks, Arlington, VA (United States), 27 Sep 1990). In *Research using small tokamaks: Proceedings of a technical committee meeting held in Arlington, Virginia, USA, 27-28 September 1990.* 198p. Order Number DE92615416. Source: OSTI; NTIS (US Sales Only); INIS.

Phaedrus-T is a moderate sized tokamak with low toroidal field and substantial radiofrequency power capabilities. This machine has only recently become operational and full RF power is expected in the next year. The initial studies include edge modifications due to variable phased antenna structures and RF helicity current drive experiments. The tokamak is also being used as a test site for diagnostic development. (author). 7 refs, 2 figs.

8276 (IAEA-TECDOC–604, pp. 123-129) **LHCD experiment on the HT-6B tokamak.** LHCD Group; HT-6B Group. International Atomic Energy Agency, Vienna (Austria); Academia Sinica, Hefei, AH (China). Inst. of Plasma Physics. May 1991. (CONF-9009463–: Technical committee on research using small tokamaks, Arlington, VA (United States), 27 Sep 1990). In *Research using small tokamaks: Proceedings of a technical committee meeting held in Arlington, Virginia, USA, 27-28 September 1990.* 198p. Order Number DE92615416. Source: OSTI; NTIS (US Sales Only); INIS.

An LHCD experiment was performed on the HT-6B tokamak recently. The rf system consisted of a 100kW, 2.45GHz power source and a multijunction antenna with relatively narrow power spectrum. At relatively high density, $\eta \approx 0.2$ ($10^{19}\mathrm{M}^{-2}$kA/kW) was achieved. The MHD modes and sawteeth were strongly affected by LHW. (author). 8 figs, 1 tab.

8277 (IAEA-TECDOC–604, pp. 181-188) **Studies of turbulence and wave coupling based on self organization process at SK/CG-1 machine.** Sinman, S. (Middle East Technical Univ., Ankara (Turkey). Plasma Engineering Lab.); Sinman, A. International Atomic Energy Agency, Vienna (Austria). May 1991. (CONF-9009463–: Technical committee on research using small tokamaks, Arlington, VA (United States), 27 Sep 1990). In *Research using small tokamaks: Proceedings of a technical committee meeting held in Arlington, Virginia, USA, 27-28 September 1990.* 198p. Order Number DE92615416. Source: OSTI; NTIS (US Sales Only); INIS.

In the SK/CG-1 Machine, using the He gas pressures between 30 and 50 mTorr, a complex turbulence regime has been determined. During the on-set phase of 0.35 μs, besides the anomalous plasma resistivity, the ion acoustic instability is also observed. At the C-gun the plasma belt which contains the hot electrons at the energy range of 60-80 eV, breaks from the gun electrodes, the translation into plasmoid case occurs and then high electric fields about 5 kV/cm in the poloidal frame of the gun are produced. Thus, the electron-ion two stream instability and just after 0.1 μs, the ion acoustic instability is started. On the other hand, in the second phase, the beam plasma instability and the ion acoustic instability are parallelly sustained. The beam plasma instability includes also the W3 ion cyclotron instability. In addition, due to the toroidal magnetic field of poloidal frame and the electric field perpendicular to it, the density and temperature gradients come into existence. Probably at the end of the resonance of the drift wave and the ion acoustic wave, the drift wave turbulence commences. The time constant of the octagonal flux conserver is about 28-30 ms. After the turbulence, the electric field on the poloidal frame drops down to 900 V/cm and it is kept for 300 ms (E/e). Thus a wave coupling mechanism depending on the self organization process is sustained. Nevertheless, it has not yet been understood exactly if the propagation at the flux conserver is realized due to the reflections or the helicity transfer from the wave to the plasma. The frequency of the closed wave packet changes in the range of 25-5 kHz depending on the electron temperatures in the range of 30-5 eV. The average electron density is about $10^{14}\mathrm{cm}^{-3}$ and the global energy confinement times are found in the range of 65-250 μs. (author). 7 refs, 6 figs.

8278 (IAEA-TECDOC–604, pp. 147-154) **Multicharged ion-atom collisions: Application for tokamak edge plasma physics.** Unterreiter, E. (Technische Univ., Vienna (Austria). Inst. fuer Allgemeine Physik); Aumayr, F.; Winter, H.P. International Atomic Energy Agency, Vienna (Austria). May 1991. (CONF-9009463–: Technical committee on research using small tokamaks, Arlington, VA (United States), 27 Sep 1990). In *Research using small tokamaks: Proceedings of a technical committee meeting held in Arlington, Virginia, USA, 27-28 September 1990.* 198p. Order Number DE92615416. Source: OSTI; NTIS (US Sales Only); INIS.

Multicharged ion-atom collisions are of interest for tokamak edge plasma physics for several reasons. Electron capture reactions taking place very probably in such collisions give rise to production of highly excited ion states from which characteristic line radiation is emitted, which produces a localized efficient energy drain from the plasma. On the other hand, by controlled application of such electron capture processes the temperature profile of the plasma may be modified to achieve optimization of plasma confinement conditions. Line radiation from such excited impurity ions can also be utilized for plasma diagnostics, using both passive and neutral beam-activated photon spectroscopies. We have recently studied electron capture in ion-atom collisions toward the following goals. Electron capture by C^{q+} and O^{q+} (q=1,2) from H_2 and He is of interest in the outermost region of tokamak discharge plasmas. Available cross section data are scarce and not very reliable, which is primarily caused by unknown long-lived excited (metastable) ion beam fractions in the corresponding cross section measurements. State-selective cross sections for electron capture by multicharged ions (in particular C^{q+}) from Li(2s) are needed for the application of Li beam-activated charge exchange spectroscopy (Li-CXS), by which means the impurity ion concentrations in tokamak edge plasmas can be measured with excellent spatial and temporal resolution. In this paper we present recently obtained cross sections for processes. The experimental methods for measuring electron capture cross sections separately for ground state and metastable ions are described. We demonstrate that for low primary ion charge states these electron capture cross sections can be much larger for the metastable than for the ground state ions, which stresses the importance for careful consideration of possible effects as caused by the participation of metastable ions in such collisional processes.

8279 (IC–91/34) **Analytic solutions of the time-dependent quasilinear diffusion equation with source and loss terms.** Hassan, M.H.A. (International Centre for Theoretical Physics, Trieste (Italy)); Hamza, E.A. International Centre for Theoretical Physics, Trieste (Italy). Oct 1991. 16p. Order Number DE92615435. Source: OSTI; NTIS (US Sales Only); INIS.

A simplified one-dimensional quasilinear diffusion equation describing the time evolution of collisionless ions in the presence of ion cyclotron resonance heating (ICRH) and sources and losses is solved analytically for all harmonics of the ion cyclotron frequency. Simple time-dependent distribution functions which are initially Maxwellian and vanish at high energies are obtained and calculated numerically for the first four harmonics of resonance heating. It is found that the strongest ion-tail of the resulting anisotropic distribution function is driven by heating at the second harmonic followed by heating at the fundamental frequency. (author). 5 refs, 5 figs.

8280 (IC–91/109) **On the generation of large-amplitude plasma wakefields with low phase velocities by an intense short laser pulse.** Murusidze, I.G.; Tsintsadze, L.N. International Centre for Theoretical Physics, Trieste (Italy). Jun 1991. 7p. Order Number DE92609543. Source: OSTI; NTIS (US Sales Only); INIS.

The problem of propagating large-amplitude laser pulses through plasmas has many unresolved issues. One of them is a group velocity of such pulses. We demonstrate that Gaussian pulses with lower amplitudes and lower group velocities are able to generate the wakefields having greater amplitudes than wakefields produced by Gaussian pulses with higher amplitudes but phase velocities close to the speed of light.

8281 (IC–91/121) **Alfven waves in inhomogeneous magnetic fields: An integro-differential equation formulation.** Uberoi, C.; Sedlacek, Z. International Centre for Theoretical Physics, Trieste (Italy). Jun 1991. 6p. Order Number DE92609544. Source: OSTI; NTIS (US Sales Only); INIS.

An integro-differential formulation for the equation governing the Alfven waves in inhomogeneous magnetic fields is shown to be similar to the polyvibrating equation of Mangeron. Exploiting this similarity, a time-dependent solution for smooth initial conditions is constructed. The important feature of this solution is that it separates the parts giving the Alfven wave oscillations of each layer of plasma and the interaction of these oscillations representing the phase mixing. (author). 8 refs.

8282 (IC–91/177) **Electrostatic drift vortices in a hot rotating strongly magnetized electron-positron pulsar plasma.** Mofiz, U.A. International Centre for Theoretical Physics, Trieste (Italy). Jul 1991. 8p. Order Number DE92614464. Source: OSTI; NTIS (US Sales Only); INIS.

Electrostatic drift wave in a hot rotating and strongly magnetized electron-positron pulsar plasma is considered. Using relativistic two fluid equations a pair of coupled nonlinear equations is derived. It is shown that the wave can propagate in the form of two-dimensional dipolar vortices at ultrarelativistic temperature (T much greater than mc^2) of the plasma. The latter may affect the energy transport in the hot plasma, which can lead to a new turbulent state in the pulsar magnetosphere. (author). 16 refs.

8283 (IC–91/178) **Alfven solitons in a dense ultrarelativistic electron-positron pulsar plasma.** Mofiz, U.A. International Centre for Theoretical Physics, Trieste (Italy). Jul 1991. 9p. Order Number DE92614465. Source: OSTI; NTIS (US Sales Only); INIS.

The nonlinear propagation of Alfven wave in a hot electron-positron plasma of a pulsar magnetosphere is investigated. Alfven solitons are found to exist at ultrarelativistic (T much greater than mc^2) temperature. Landau damping and three dimensional modulation perturbation of solitons are discussed. (author). 11 refs.

8284 (IC–91/182) **Nonlinear interaction of waves at the input of a beam into a semi-bounded warm plasma.** Hussein, A.M. International Centre for Theoretical Physics, Trieste (Italy). Jul 1991. 7p. Order Number DE92614466. Source: OSTI; NTIS (US Sales Only); INIS.

An investigation is made of the nonlinear interaction of waves at the input of a beam into a semi-bounded warm plasma. The amplitudes of the wave have been found. The effect of the thermal velocity is to increase the amplitude of the generated waves. The absorption of the energy of these waves by the plasma can exceed the energy at the expense of waves with the basic frequency. (author). 7 refs.

8285 (INIS-mf–13070) **Reflectometry and transport in thermonuclear plasmas in the Joint European Torus.** Sips, A.C.C. Technische Univ. Eindhoven (Netherlands). 22 Mar 1991 127p. Order Number DE92614448. Source: OSTI; NTIS (US Sales Only); INIS.

This work was performed as part of the research program association agreement of EURATOM and the 'Stichting voor Fundamenteel Onderzoek der Materie FOM' (Foundation for Fundamental Research into Matter), with financial support from the 'Nederlandse Organisatie voor Weten-schappelijk Onderzoek WNO' (Netherlands Organization for Scientific Research) and EURATOM. It was carried out under the TASK agreement (FOM/TA2) between JET and the FOM Institute for Plasma Physics 'Rijnhuizen', the Netherlands, and the Joint European Torus (JET) in Culham, England; includes summary in Dutch.

The subjects of this thesis are the study of microwave reflectometry as a method to measure electron density profiles, and the study of particle and energy transport in thermonuclear plasmas. In the transport studies data of a 12-channel reflectometer system are used to analyze the propagation of electron density perturbations in the plasma. The measurements described in this thesis are performed in the plasmas in the Joint European Torus (JET). The main points of study described are based on microwave reflectometry, the principles of which are given. Two modes of operation of a reflectometer are described. Firstly, electro-magnetic waves with constant frequencies may be launched into the plasma to measure variations in the electron density profile. Secondly, the absolute density profile can be measured with a reflectometer, when the source frequencies are swept. (author). 56 refs.; 41 figs.; 5 tabs.

8286 (INIS-mf–13075) **Electron and current density measurements on tokamak plasmas.** Lammeren, A.C.A.P. van. Rijksuniversiteit Utrecht (Netherlands). 18 Sep 1991 140p. Order Number DE92614449. Source: OSTI; NTIS (US Sales Only); INIS.

This thesis is financially supported by the Foundation for Fundamental Research of Matter (FOM) and EURATOM. The work has been carried out on the FOM-Institute for Plasmaphysics 'Rijnhuizen', Nieuwegein, Netherlands; includes summary in Dutch.

The first part of this thesis describes the Thomson-scattering diagnostic as it was present at the TORTUR tokamak. For the first time with this diagnostic a complete tangential scattering spectrum was recorded during one single laser pulse. From this scattering spectrum the local current density was derived. Small deviations from the expected gaussian scattering spectrum were observed indicating the non-Maxwellian character of the electron-velocity distribution. The second part of this thesis describes the multi-channel interferometer/polarimeter diagnostic which was constructed, build and operated on the Rijnhuizen Tokamak Project (RTP) tokamak. The diagnostic was operated routinely, yielding the development of the density profiles for every discharge. When ECRH (Electron Cyclotron Resonance Heating) is switched on the density profile broadens, the central density decreases and the total density increases, the opposite takes place when ECRH is switched off. The influence of MHD (magnetohydrodynamics) activity on the density was clearly observable. In the central region of the plasma it was measured that in hydrogen discharges the so-called sawtooth collapse is preceded by an m=1 instability which grows rapidly. An increase in radius of this m=1 mode of 1.5 cm just before the crash is observed. In hydrogen discharges the sawtooth induced density pulse shows an asymmetry for the high- and low-field side propagation. This asymmetry disappeared for helium discharges. From the location of the maximum density variations during an m=2 mode the position of the q=2 surface is derived. The density profiles are measured during the energy quench phase of a plasma disruption. A fast flattening and broadening of the density profile is observed. (author). 95 refs.; 66 figs.; 7 tabs.

8287 (INIS-mf--13076) **Low-energy hydrogen flux measurements at the TORTUR tokamak with negative ion conversion.** Toledo, Wiebo van. Rijksuniversiteit Utrecht (Netherlands). 13 Jun 1990 136p. Order Number DE92614450. Source: OSTI; NTIS (US Sales Only); INIS.

This work was performed as part of the research programme of the Foundation for Fundamental Research of Matter (FOM), with financial support from the Netherlands Organization for Scientific Research (NWO) and EURATOM. It was carried out at the FOM-Institute for Plasma-Physics 'Rijnhuizen', Nieuwegein, the Netherlands; includes summary in Dutch.

The interaction of a tokamak plasma with the vessel wall is one of the most important subjects in thermonuclear research. The information about this interaction is not complete without direct detection of the outward stream of low-energy, down to a few electronvolts, neutral hydrogen or deuterium atoms. The detection of these atoms is the subject of this thesis. An appropriate method to analyse the atoms which are emitted from the edge plasma is to use a time-of-flight analyser. This kind of apparatus selects particles according to their velocities with-out distinguishing between different masses. If these analysers use the Daly-method the lowest measurable energy of the hydrogen atoms is approximately 25 electronvolts. To increase the detection efficiency a new detection method was developed. This new method uses the conversion of hydrogen atoms into H- ions on a cesiated tungsten surface. By this conversion the lowest measurable energy is decreased down to 5 electron-volt. (author). 93 refs.; 44 figs.; 7 tabs.

8288 (IPPT-IFTR--49/1988) **Stability conditions for double layers in plasma in hydrodynamic and kinetic description.** Zuchowski, K. Polska Akademia Nauk, Warsaw (Poland). Inst. Podstawowych Problemow Techniki. 1988. 19p. (In Polish). Order Number DE92614467. Source: OSTI; NTIS (US Sales Only); INIS.

The conditions of existence and stability of double layers in hydrodynamic and kinetic description of plasma are shortly considered. (A.S.).

8289 (IPPT-IFTR--50/1988) **Continuous transform group for multiple plasma model of Vlasov-Poisson-Amper.** Atamaniuk, B. Polska Akademia Nauk, Warsaw (Poland). Inst. Podstawowych Problemow Techniki. 1988. 15p. (In Polish). Order Number DE92614468. Source: OSTI; NTIS (US Sales Only); INIS.

The continuous transform group for 3 models of multiple plasma , which is described by Vlasov-Poisson-Amper equations system, is calculated. (A.S.).

8290 (JAERI-M--91-131) **Evaluation of mode purity of ordinary and extraordinary modes by fixed elliptically polarized wave for ECH and ECCD.** Saigusa, Mikio (Japan Atomic Energy Research Inst., Naka, Ibaraki (Japan). Naka Fusion Research Establishment). Japan Atomic Energy Research Inst., Tokyo (Japan). Aug 1991. 20p. Order Number DE92750961. Source: OSTI; NTIS (US Sales Only); INIS.

Mode separation ratio from an arbitrary elliptically polarized electromagnetic wave to an ordinary and an extraordinary modes on a plasma surface for oblique launch is evaluated quantitatively for designing an electron cyclotron current drive (ECCD) antenna. An optimized elliptical polarization for the wide range of injection angles and magnetic fields is firstly investigated for ECCD and ECH experiments. (author).

8291 (JAERI-M--91-135) **Spectroscopic studies in JT-60.** Kubo, Hirotaka (Japan Atomic Energy Research Inst., Naka, Ibaraki (Japan). Naka Fusion Research Establishment). Japan Atomic Energy Research Inst., Tokyo (Japan). Sep 1991. 146p. (In Japanese). Order Number DE92750963. Source: OSTI; NTIS (US Sales Only); INIS.

This paper summarizes the spectroscopic studies in JT-60 which was constructed to explore the break-even plasma. The content is as follows; (1) In order to study impurity behaviors in the JT-60 plasma, a spectroscopic diagnostic system, which is capable of measuring many spectra of impurity ions and their spatial distributions, has been developed. (2) A Rowland-type grazing incidence monochromator has been absolutely calibrated with a branching ratio method. And multi-channel spectrometers have been absolutely calibrated in the wavelength region of 275-1250A using synchrotron radiation. (3) The transport coefficients (D, c_v) for impurity have been measured by observing the time evolutions of line intensities of titanium in ohmically heated and neutral beam heated discharges. (4) Impurity contents have been measured in limited discharges and diverted discharges with different materials for the first wall, namely metallic wall and graphite wall. (5) For the Lyman-α line of TiXXII, the intensity ratio of its fine structure components ($1\ {}^2S_{1/2}$ - $2\ {}^2P_{1/2,3/2}$) has been measured in discharges with various heating modes. (6) Energy levels and oscillator strengths have been calculated for MoXV-XL. (J.P.N.).

8292 (JAERI-M--91-156) **Fusion gain due to high energy ions accelerated by additional heating.** Hamamatsu, Kiyotaka (Japan Atomic Energy Research Inst., Naka, Ibaraki (Japan). Naka Fusion Research Establishment); Azumi, Masafumi; Fukuyama, Atsushi. Japan Atomic Energy Research Inst., Tokyo (Japan). Oct 1991. 21p. (In Japanese). Order Number DE92751038. Source: OSTI; NTIS (US Sales Only); INIS.

In order to investigate a gain of fusion reaction caused by high energy ions, the ICRF wave propagation equation and the Fokker-Planck equation with the effects of particle acceleration due to the rf-electric field are numerically analyzed in a self-consistent manner. In the ICRF and NBI heated plasmas, the input power dependences of fusion output power of D-D, D-^{3}He and D-T reactions are calculated and compared with each other. As for the ICRF heating conditions, the higher harmonic resonance up to the third one and phase control of antenna currents are taken into account. To optimize the NBI heating condition on a fusion reaction, the beam energy needs to be exceeded the energy where the fusion cross section is maximum. In the case of ICRF heating, fast ions are accelerated beyond the several MeV by the velocity diffusion coefficient due to rf-electric field in the Fokker-Planck equation. The ICRF heating condition does not affect the fusion output so seriously from this standpoint. As for the D-D reaction, however, the third harmonic resonance heating is more effective than the second one. Because, the fusion cross-section of D-D reaction has a maximum value at high energy range ($3 \approx 4$ MeV) and the third harmonic resonance heating accelerates higher energy particles than the second one. On the other hand, in order to avoid the direct power loss by electron Landau damping in the wave propagation process, the phase difference of antenna currents needs to be inphase. (author).

8293 (JAERI-M--91-159) **Annual report of the Naka Fusion Research Establishment for the period of April 1, 1990 to March 31, 1991.** Japan Atomic Energy Research Inst., Tokyo (Japan). Oct 1991. 147p. Order Number DE92751039. Source: OSTI; NTIS (US Sales Only); INIS.

R and D activities of the Naka Fusion Research Establishment, JAERI, are reported for the period from April 1, 1990 to March 31, 1991. Since the shutdown of JT-60 in November 1989, the reconstruction work of the JT-60 device was continued until the end of March 1991. In the JT-60 Upgrade, the poloidal field coils and vacuum vessel were renewed and the plasma current was planned to increase up to 6 MA with lower single null divertor. The divertor plates were designed to be toroidally continuous and to use high-heat-conduction C/C composite materials. Another objective of JT-60U is to facilitate tokamak experiments with deuterium as the working gas. In the JFT-2M program, a system for divertor bias experiments was brought into operation and initial experiments were started to study its effects on plasma discharges. Effects of ergodic magnetic limiter on H-modes were examined and stationary H-modes were obtained under the control of ergodic magnetic limiter currents. The DIII-D program was highlighted by the attainment of 11% beta with a double null divertor plasma. As for the fusion engineering research, development activities of the ceramic turbo-viscous pump and the surface insulation techniques for the tokamak in-vessel components are remarked in the vacuum technology area. In the high heat flux experiments with the JAERI Electron Beam Irradiation Stand (JEBIS), carbon-based materials and refractory metals were tested to evaluate surface erosion at plasma disruptions. The ITER Conceptual Design Activities, which began in April 1988 under the auspices of the IAEA, were successfully completed in December 1990. A lot of contributions to the program were made by JAERI people to support the design and R and D activities and to prepare a plan for the forthcoming Engineering Design Activities. (J.P.N.).

8294 (KFTI–89-30) **Stability of magnetic configuration and limit equilibrium plasma pressure in stellarator.** Aleksin, V.F.; Sebko, V.P.; Tyupa, V.I. AN Ukrainskoj SSR, Kharkov (Ukrainian SSR). Fiziko-Tekhnicheskij Inst. 1989. 14p. (In Russian). Order Number DE92609370. Source: OSTI; NTIS (US Sales Only); INIS.

Criteria of limited equilibrium plasma pressure which are connected with the violation of magnetic configuration stability in relation to various resonance perturbations are considered. 22 refs.; 1 fig.

8295 (KFTI–89-31) **Rotational transform angles in the U-2M torsatron with account of plasma finite pressure.** Aleksin, V.F.; Tyupa, V.I. AN Ukrainskoj SSR, Kharkov (Ukrainian SSR). Fiziko-Tekhnicheskij Inst. 1989. 8p. (In Russian). Order Number DE92609371. Source: OSTI; NTIS (US Sales Only); INIS.

Universal dependences for the stellarator (torsatron) rotational transformation angles are obtained using the formulas of averaging by magnetic surfaces with regard to the plasma finite pressure. 14 refs.; 2 figs.

8296 (KFTI–89-48) **Experiments on the laser injection of impurity atoms at the Uragan-3 torsatron.** Berezhnyj, V.L. (and others); Vojtsenya, V.S.; Volkov, Ya.F. AN Ukrainskoj SSR, Kharkov (Ukrainian SSR). Fiziko-Tekhnicheskij Inst. 1989. 24p. (In Russian). Order Number DE92609372. Source: OSTI; NTIS (US Sales Only); INIS.

Experiments on carbon atom injection into ICR-discharge hydrogen plasma (n-bar$_e$=4x10^{12} cm^{-3}, $T_e \simeq 250$ eV, $T_i \simeq 350$ eV, B_0=046Tl) are conducted at a three-pass Uragan-3 torsatron. Injection is perormed by ruby laser radiation effect on the surface of steady-state graphite target, mounted on the internal surface of one of screw conductors. Comparison of the experimentally observed time course of C5 line intensity to the results of mathematic simulation of carbon transfer in plasma gives the values of diffusion coefficient and convection rate D=18x10^{3}cm^2/s, V=4.5x10^{3}cm/s respectively is performed. The minimal carbon atom concentration in plasma measured (without injection) is at the level of 5x10^{-3}n-bar$_e$. Radiation losses conditioned by the background carbon under the conditions of the purest unit are at the level of 200 W. Radiation losses in the range of 0.1-10nm, linked with carbon, make up ≈2% of total radiation losses of plasma. 20 refs.; 13 figs.

8297 (KFTI–89-59) **Effect of high-power RF-fields on the inhomogeneity of plasma density in magnetized plasma waveguide.** Bliokh, Yu.P.; Lyubarskij, M.G. AN Ukrainskoj SSR, Kharkov (Ukrainian SSR). Fiziko-Tekhnicheskij Inst. 1989. 9p. (In Russian). Order Number DE92609545. Source: OSTI; NTIS (US Sales Only); INIS.

The mechanism of inhomogeneities growth in magnetized plasma waveguide in the case when the level of HF-power density exceeds the thermal power density is indicated. 13 refs.

8298 (LA-UR–91-4080) **ITER edge-plasma conditions versus pump configuration.** Werley, K.A. (Los Alamos National Lab., NM (United States)); Cohen, S.A. Los Alamos National Lab., NM (United States). 11 Dec 1991. 23p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-36 ;AC02-76CH03073. (CONF-920311–1: 10. international conference on plasma-surface interactions in controlled fusion devices, Monterey, CA (United States), 30 Mar - 3 apr 1992). Order Number DE92005053. Source: OSTI; NTIS; INIS; GPO Dep.

Two-dimensional fluid simulations of ITER double-null divertor scrape-off-layer plasma conditions have been restricted to examining a single outboard divertor plate with up/down symmetry assumed. The present work evaluates the effect of pumping at only one plate on particle flow patterns and other parameters of interest. Pumping only at one plate results in reduced sheath temperatures at both plates but an increased heat flux at the pumped plate. The physics assumptions for separatrix density (n_{SEP}=(n)/3.5) and for radial particle diffusivity (D=0.66m^2/s) used in the simulation of ITER edge plasma result in particle throughputs two orders of magnitude greater than that required for acceptable fusion-product ash removal rates. The particle confinement time, however, is an order of magnitude shorter than the transport energy confinement time, τ_E. Plasmas (D=0.04m^2/s) which would have $\tau_p \sim \tau_E$ are evaluated and found to have unacceptably high plasma temperatures and heat flux at the plate. Ash removal rates are still acceptable. A plasma recycle coefficient of R=0.965 reduces the particle throughput by a factor of 2.8 below the no-recycle case.

8299 (LRP–429/91) **Ideal toroidal stability β limits and shaping effects for reversed field pinch configurations.** Paccagnella, R. (Padua Univ., Ist. Gas Ionizzati, Padua (Italy)); Bondeson, A.; Luetjens, H. Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP). May 1991. 28p. Order Number DE92614469. Source: OSTI; NTIS (US Sales Only); INIS.

The influence of shaping and toroidicity on the ideal MHD stability of the Reversed Field Pinch (RFP) is investigated both with respect to current and pressure driven modes. It is found that triangularity and x-point shaping does not significantly modify the operational limits of RFP, while ellipticity and D-shaping is destabilizing. A simple relation for the stability of current driven modes is also given. (author) 12 figs., 17 refs.

8300 (LRP–432/91) **Non-local effects of alpha particles on second-harmonic heating.** Sauter, O. (Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP)); Vaclavik, J. Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP). Aug 1991. 35p. Order Number DE92614479. Source: OSTI; NTIS (US Sales Only); INIS.

A model based on the linearized Vlasov-Maxwell equations, taking into account the non-local interactions of particles due to their finite Larmor radii, has been developed. Assuming an inhomogeneous 1-D slab plasma, Maxwellian equilibrium distribution functions and k_y=0, it leads to a system of one first-order and two second-order integro-differential equations for E_x and E_y, E_z respectively. These equations are valid for arbitrary value of k/ρ_σ, where k/ρ_σ is the perpendicular wavenumber and ρ_σ the Larmor radius of species σ. Therefore, the code SEMAL, solving these equations, is well appropriate for studying the effects of alpha particles on the ion cyclotron range of frequency (ICRF) heating. These effects are shown to be much less significant for heating at the second harmonic of deuterium than expected from local models. Other heating scenarii of deuterium as well as the influence of k_z, T_α, non-Maxwellian distribution functions and n_α/n_e are also investigated. The results indicate under which conditions the power absorption by alpha particles start to dominate and, therefore, degrade the heating efficiency. (author) 10 figs., 10 refs.

8301 (LRP–433/91) **Stability of the n=1 ideal internal kink for large aspect ratio Shafranov equilibria.** Bondeson, A. (Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP)); Bussac, M.N. Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de

Recherche en Physique des Plasma (CRPP). Sep 1991. 9p. Order Number DE92614470. Source: OSTI; NTIS (US Sales Only); INIS.

Stability limits for the ideal internal kink mode are calculated analytically for the Shafranov current profile using the large aspect ratio expansion. For equilibria with q(a)>2 and circular cross section, the maximum stable poloidal beta is below 0.1. In the absence of a conducting wall, an equilibrium with q(a)<2 is unstable at arbitrarily small positive poloidal beta or shear inside the q = 1 surface. The effects of non-circularity are discussed and quantitative results are given for elliptic cross sections. (author) 2 figs., 10 refs.

8302 (LRP–434/91) **The effects of plasma deformability on the feedback stabilization of axisymmetric modes in tokamak plasmas.** Ward, D.J. (Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP)); Jardin, S.C. Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP). Sep 1991. 54p. Order Number DE92614471. Source: OSTI; NTIS (US Sales Only); INIS.

The effects of plasma deformability on the feedback stabilization of axisymmetric modes of tokamak plasmas are studied. It is seen that plasmas with strongly shaped cross sections have unstable motion different from a rigid shift. Furthermore, the placement of passive conductors is shown to modify the non-rigid components of the eigenfunction in a way that reduces the stabilizing eddy currents in these conductors. Passive feedback results using several equilibria of varying shape are presented. The eigenfunction is also modified under the effects of active feedback. This deformation is seen to depend strongly on the position of the flux loops which are used to determine plasma vertical position for the active feedback system. The variations of these non-rigid components of the eigenfunction always serve to reduce the stabilizing effect of the active feedback system by reducing the measurable poloidal flux at the flux-loop locations. Active feedback results are presented for the PBX-M tokamak configuration. (author) 19 figs., 2 tabs., 30 refs.

8303 (LRP–435/91) **Frequency effects in silane plasmas for PECVD.** Howling, A.A. (Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP)); Dorier, J.L.; Hollenstein, C.; Finger, F.; Kroll, U. Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP). Sep 1991. 21p. Order Number DE92614451. Source: OSTI; NTIS (US Sales Only); INIS.

It is generally recognised that the excitation frequency is an important parameter in rf plasma-assisted deposition. VHF silane plasmas (50-100 MHz) have been shown to produce high quality amorphous silicon films up to 20 A/s, and therefore the aim of this work is to compare the VHF range with the 13.56 MHz industrial frequency in the same reactor. The principal diagnostics used are electrical measurements and a CCD camera for spatially-resolved plasma-induced emission with Abel inversion of the plasma image. We present a comparative study of key discharge parameters such as deposition rates, plasma uniformity, ion impact energy, power transfer efficiency and powder formation for the rf range 13-70 MHz. (author) 5 figs., 19 refs.

8304 (LRP–436/91) **Powder dynamics in VHF silane plasmas.** Dorier, J.L. (Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP)); Hollenstein, C.; Howling, A.A.; Kroll, U. Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP). Sep 1991. 20p. Order Number DE92614459. Source: OSTI; NTIS (US Sales Only); INIS.

Particulate contamination produced during plasma-assisted deposition of amorphous silicon devices can be responsible for reduced quality and yield. The threshold for power formation imposes an upper limit on the rf power and hence the deposition rate. In this work, the parallel-plate capacitor discharge volume is illuminated and global, spatio-temporal powder production is determined visually and from observed modifications to the discharge electrical properties such as the matching condition, the dc self bias and the rf power transfer efficiency. A systematic study has been made of the powder-free operational space as a function of rf power, rf frequency (13.56-70 MHz) and substrate temperature. (author) 6 figs., 18 refs.

8305 (LRP–438/91) **Density limit disruption studies in the TCA tokamak.** Pietrzyk, Z.A. (Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP)); Pochelon, A.; Behn, R.; Bondeson, A.; Duperrex, P.A.; Duval, B.P.; Joye, B.; Knight, A.J.; Marchal, B.; Nieswand, C. Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP). Oct 1991. 74p. Order Number DE92614433. Source: OSTI; NTIS (US Sales Only); INIS.

This paper describes density limit plasma disruptions that take place during the density increase in the plasma current flat top of TCA. In TCA, such disruptions have been observed to occur at two different densities, depending on discharge programming. An efficient method of achieving high density is to introduce a strong influx of neutral gas to the plasma, which was found to allow the plasma density to cross a range of densities that was otherwise unstable. In this kind of operation the disruption was observed to be approached from high to low plasma inductance in contrast to a slower density rise where the inductance is increasing. The study of the plasma temperature and density profiles as the disruption is approached, together with the characterisation of the mode and sawtooth activity, gives further insights into the physics of plasma disruptions. (author) 32 figs., 3 tabs., 30 refs.

8306 (NIFS–100) **Fluid description of ponderomotive force compatible with the kinetic one in a warm plasma.** Hojo, Hitoshi (Tsukuba Univ., Ibaraki (Japan). Plasma Research Center); Ogawa, Tomoko; Kono, Mitsuo. National Inst. for Fusion Science, Nagoya (Japan). Jul 1991. 11p. Order Number DE92751077. Source: OSTI; NTIS (US Sales Only); INIS.

The ponderomotive effect of electromagnetic wave fields is practically very important in such cases as RF stabilization, RF-induced transport in magnetically confined plasma and so on. However, theoretically there are still discrepancies among the expressions derived by a number of authors. In this short note, attention is restricted to the discrepancy between fluid and kinetic expressions of the ponderomotive force often found in literatures dealing with warm plasma, and where it stems from and how it is resolved are discussed. The ponderomotive force density of electromagnetic wave fields based on Vlasov theory has been obtained. Also the fluid ponderomotive force density is given. The case of electrostatic high frequency waves in a unmagnetized plasma is considered. The discrepancy between both expressions was found. This discrepancy in a warm plasma is due to the lack of a wave-induced contribution to the thermal pressure in the fluid description of ponderomotive force density. The fluid description of the ponderomotive force can be made compatible with the kinetic one in warm plasma. (K.I.).

8307 (NIFS–102) **Rotations of bulk ions and impurities in non-axisymmetric toroidal systems.** Nakajima, Noriyoshi; Okamoto, Masao. National Inst. for Fusion Science, Nagoya (Japan). Jul 1991. 21p. Order Number DE92750966. Source: OSTI; NTIS (US Sales Only); INIS.

Neoclassical rotations are investigated theoretically for a plasma consisting of electrons, bulk ions, and impurities in non-axisymmetric toroidal systems. Impurity ions are assumed to lie in the Pfirsch-Schlueter collisionality regime. The results include the case of tokamaks. It is found that the rotations of impurities are generally different from those of bulk ions. The difference comes from mainly the different diamagnetic flows between bulk ions and impurities. In the $1/\nu$ regime or banana regime the gradient of bulk ion temperature may be another cause for the different rotations between the two species. However, in the region where the configuration is far from the axisymmetry the cause of different rotations is just the different diamagnetic flows. As the poloidal rotations depend on the radial electric field contrary to the axisymmetric system, a relationship, which does not include the radial electric field, can be derived between poloidal and toroidal rotations. By estimating this relationship based on the measured rotations the present neoclassical theory can be validated without knowledge of radial electric field. (author).

8308 (NIFS-MEMO–1) **Feedback control of plasma equilibrium with control system aided by personal computer on the JIPP T-IIU tokamak.** Tsuzuki, T.; Toi, K.; Matsuura, K. National Inst. for Fusion Science, Nagoya (Japan). Apr 1991. 35p. (In

Japanese). Order Number DE92750824. Source: OSTI; NTIS (US Sales Only); INIS.

A feedback control system aided by a personal computer is developed to maintain plasma position on the required position in the JIPP T-IIU tokamak. The personal computer enables to adjust various control parameters easily. In this control system, a control demand for driving the power supply of feedback controlled vertical field coils is composed to be proportional to a total plasma current. This system has been successfully employed throughout the discharge where the plasma current substantially changes from zero to hundreds of kiloamperes, because the feedback control can be done, being independent of the plasma current. The analysis of this feedback control system taken into account of digital sampling agrees well with the experimental results. (author).

8309 (PPPL–2784) **Transport simulations TFTR: Theoretically-based transport models and current scaling.** Redi, M.H.; Cummings, J.C.; Bush, C.E.; Fredrickson, E.; Grek, B.; Hahm, T.S.; Hill, K.W.; Johnson, D.W.; Mansfield, D.K.; Park, H.; Scott, S.D.; Stratton, B.C.; Synakowski, E.J.; Tang, W.M.; Taylor, G. Princeton Univ., NJ (United States). Plasma Physics Lab. Dec 1991. 56p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH03073. Order Number DE92005130. Source: OSTI; NTIS; INIS; GPO Dep.

In order to study the microscopic physics underlying observed L-mode current scaling, 1-1/2-d BALDUR has been used to simulate density and temperature profiles for high and low current, neutral beam heated discharges on TFTR with several semi-empirical, theoretically-based models previously compared for TFTR, including several versions of trapped electron drift wave driven transport. Experiments at TFTR, JET and D3-D show that I_p scaling of τ_E does not arise from edge modes as previously thought, and is most likely to arise from nonlocal processes or from the I_p-dependence of local plasma core transport. Consistent with this, it is found that strong current scaling does not arise from any of several edge models of resistive ballooning. Simulations with the profile consistent drift wave model and with a new model for toroidal collisionless trapped electron mode core transport in a multimode formalism, lead to strong current scaling of τ^E for the L-mode cases on TFTR. None of the theoretically-based models succeeded in simulating the measured temperature and density profiles for both high and low current experiments.

8310 (PPPL–2802) **Comparison of measured electron density rise and calculated neutral beam particle deposition in the TFTR tokamak.** Park, H. (Princeton Univ., NJ (United States). Plasma Physics Lab.); Budny, R.; McCune, D.; Taylor, G.; Zarnstorff, M.C.; Barnes, C.W. Princeton Univ., NJ (United States). Plasma Physics Lab. Dec 1991. 14p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH03073. Order Number DE92005131. Source: OSTI; NTIS; INIS; GPO Dep.

The initial rate of rise of the central electron density during ~100 keV deuterium neutral beam injection is found to agree well with calculations of the beam deposition rate. The best agreement is with beam deposition calculations using older tabulations of the atomic cross-sections; the effects of using new tabulations or including multi-step ionization processes appear to approximately cancel. The neutral-beam deposition profile is a strong function of both the magnitude and the shape of the target plasma density. Peaked heating profiles can be achieved at high target densities only from peaked target density profiles. 15 refs., 4 figs.

8311 (PPPL–2808) **Simulations of DT experiments in TFTR.** Budny, R.; Bell, M.G.; Biglari, H.; Bitter, M.; Bush, C.; Cheng, C.Z.; Fredrickson, E.; Grek, B.; Hill, K.W.; Hsuan, H.; Janos, A.; Jassby, D.L.; Johnson, D.; Johnson, L.C.; LeBlanc, B.; McCune, D.C.; Mikkelsen, D.R.; Park, H.; Ramsey, A.T.; Sabbagh, S.A.;Princeton Univ., NJ (United States). Plasma Physics Lab. Dec 1991. 62p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH03073. Order Number DE92005132. Source: OSTI; NTIS; INIS; GPO Dep.

A transport code (TRANSP) is used to simulate future deuterium-tritium experiments (DT) in TFTR. The simulations are derived from 14 TFTR DD discharges, and the modeling of one supershot is discussed in detail to indicate the degree of accuracy of the TRANSP modeling. Fusion energy yields and α-particle parameters are calculated, including profiles of the α slowing down time, average energy, and of the Alfven speed and frequency. Two types of simulations are discussed. The main emphasis is on the DT equivalent, where an equal mix of D and T is substituted for the D in the initial target plasma, and for the D^O in the neutral-beam injection, but the other measured beam and plasma parameters are unchanged. This simulation does not assume that α heating will enhance the plasma parameters, or that confinement will increase with T. The maximum relative fusion yield calculated for these simulations is $Q_{DT} \approx 0.3$, and the maximum α contribution to the central toroidal β is $\beta_\alpha(0) \approx 0.5\%$. The stability of toroidicity-induced Alfven eigenmodes (TAE) and kinetic ballooning modes (KBM) is discussed. The TAE mode is predicted to become unstable for some of the equivalent simulations, particularly after the termination of neutral beam injection. In the second type of simulation, empirical supershot scaling relations are used to project the performance at the maximum expected beam power. The MHD stability of the simulations is discussed.

8312 (TRITA-PFU–90-13) **Electron plasma oscillations at arbitrary Debye lengths.** Lehnert, B. Royal Inst. of Tech., Stockholm (Sweden). Dept. of Plasma Physics and Fusion Research. Dec 1990. 22p. Order Number DE92614472. Source: OSTI; NTIS (US Sales Only); INIS.

A solution is presented for electron plasma oscillation in a thermalized homogeneous plasma, at arbitrary ratios between the Debye length λ_D and the perturbation wave length λ. The limit $\lambda_D << \lambda$ corresponds to conventional fluid-like theory of small particle excursions, whereas $\lambda_D >> \lambda$ corresponds to the free-streaming limit of strong kinetic phase-mixing due to large particle excursions. A strong large Debye distance (LDD) effect already appears when $\lambda_D >$ approx λ. The initial amplitude of the fluid-like contribution to the macroscopic density perturbation then becomes small as compared to the contribution from the free-streaming part. As a consequence, only a small fraction of the density perturbation remains after a limited number of kinetic damping times of the free-streaming part. The analysis further shows that a representation in terms of normal model of the form $\exp(-i\omega t)$ leads to amplitude factors of these modes which are related to each other and which depend on the combined free-streaming and fluid behaviour of the plasma. Consequently, these modes are coupled and cannot be treated as being independent of each other. (au).

8313 (TRITA-PFU–91-05) **Neutron time-of-flight counters and spectrometers for diagnostics of burning fusion plasmas.** Elevant, T.; Olsson, M. Royal Inst. of Tech., Stockholm (Sweden). Dept. of Plasma Physics and Fusion Research. Feb 1991. 44p. Order Number DE92614452. Source: OSTI; NTIS (US Sales Only); INIS.

Experiment with burning fusion plasmas in tokamaks will place particular requirements on neutron measurements from radiation resistance-, physics-, burn control- and reliability considerations. The possibility to meet these needs by measurements of neutron fluxes and energy spectra by means of time-of-flight techniques are described. Reference counters and spectrometers are proposed and characterized with respect to efficiency, count-rate capabilities, energy resolution and tolerable neutron and γ-radiation background levels. The instruments can be used in a neutron camera and are capable to operate in collimated neutron fluxes up to levels corresponding to full nuclear output power in the next generation of experiments. Energy resolutions of the spectrometers enables determination of ion temperatures from 3 (keV) through analysis of the Doppler broadening. Primarily, the instruments are aimed for studies of 14 (MeV) neutrons produced in (d,t)-plasmas but can, after minor modifications, be used for analysis of 2.45 (MeV) neutrons produced in (d,d)-plasma. (au) (33 refs.).

8314 (TRITA-PFU–91-06) **Pre-study of burn control in Tokamak reactor experiments.** Elevant, T. (Chalmers Univ. of Technology, Goeteborg (Sweden). Inst. of Electromagnetic Field Theory and Plasma Physics); Anderson, D.; Hamnen, H.; Lisak, M.; Persson, H. Royal Inst. of Tech., Stockholm (Sweden). Dept. of Plasma Physics and Fusion Research. Apr 1991. 137p. Order Number DE92614440. Source: OSTI; NTIS (US Sales Only); INIS.

Findings from a general study of issues associated with control of burning fusion plasmas are reported, and applications to ITER are given. A number of control variables are discussed. A zerodimensional system has been developed and stability against coupled temperature and density variations are studied. Also space dependent energy balance and transition to thermonuclear burn are analysed as well as maximum obtainable Q-values under subignited operation conditions. Control designs with different input-output strategies are analysed and numerically simulated, and a numerical experiment of system identification is made. Requirements on diagnostics are discussed and areas for further studies are identified. (au) (64 refs.).

8315 (TRITA-PFU-91-07) **A time-of-flight neutron spectrometer for DT-plasma diagnostics.** Olsson, M.; Elevant, T. Royal Inst. of Tech., Stockholm (Sweden). Dept. of Plasma Physics and Fusion Research. Jun 1991. 52p. Order Number DE92614453. Source: OSTI; NTIS (US Sales Only); INIS.

A neutron time-of-flight spectrometer is proposed for spectral measurements of 14 MeV neutrons, generated in deuterium plasma through consecutive d(d,t)p and $d(t,n)\alpha$ reactions, i.e. minority d-t neutrons. According to numerical simulations, spectral width, average energy and fluxes of neutrons depend on confinement and slowing down of the tritons in which the electron temperature plays a significant role. Neutrons, backscattered in a deuterated first scintillator are detected in a second hydrogen based scintillator. Laboratory tests, with an efficiency of 8×10^{-6} cm^2 provide a resolution equal to 2.2%, which scales reciprocally to the flight path length. A reference spectrometer is suggested for measurements at JET, with an efficiency of 2.7×10^{-2} cm^2 and an energy resolution better than 3%, which enables spectral measurements of 14 MeV minority neutrons in the emission interval 5×10^{13} - 10^{16} s^{-1}, provided neutron filters are utilized. An upgraded version of the device, aimed for spectral measurements of 14 MeV neutrons from DT-plasmas, is suggested. In this case the resolution is 2.0% and the maximum efficiency 2.9×10^{-3} cm^2. (au).

8316 (TRITA-PFU-91-08) **Visible spectroscopy at the Extrap-T1 pinch experiment.** Bengtsson, P. (Lund University, (Sweden). Dept. of Physics); Brzozowski, J.H.; Kaellne, E.; Zaztrow, K.D. Royal Inst. of Tech., Stockholm (Sweden). Dept. of Plasma Physics and Fusion Research. Jun 1991. 59p. Order Number DE92614460. Source: OSTI; NTIS (US Sales Only); INIS.

A wide range UV to visible spectrum from 2450 to 8050 Angstrom has been acquired and analysed for the EXTRAP-T1 plasma. The impurity lines in the spectrum are mainly from carbon and oxygen species up to four times ionized, but also nitrogen lines are present. No traces of metal impurity are observed. We have identified most of the spectral lines and compare intensities from several multiplets with predicted values. A spectral range free from line emission is found which is suitable for continuum measurements. Furthermore, line strictures are identified as originating from the CH molecule and are observed both using a center chord line of sight and an edge chord line-of-sight through the plasma. (au).

8317 (UCRL-JC-107675) **Measurements and models of the opacity of hot, dense plasma.** Springer, P.T.; Perry, T.S.; Fields, D.F.; Goldstein, W.H.; Wilson, B.G.; Stewart, R.E. Lawrence Livermore National Lab., CA (United States). Aug 1991. 8p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-9108105-4: 8. topical conference on atomic processes in plasmas, Portland, ME (United States), 25-29 Aug 1991). Order Number DE92004654. Source: OSTI; NTIS; GPO Dep.

In order to test and improve opacity models, we are performing experiments to accurately characterize and measure the opacity of high-Z plasmas. In the experiments the NOVA laser at Lawrence Livermore National Laboratory is used to indirectly heat tamped thin foil targets containing mid to high-Z ions of interest which are co-mixed with low-Z ions for spectroscopic determinations of plasma conditions. One of the NOVA beams is used to create a source of x-rays of backlighting the plasma face-on, while another beam is used to perform a radiograph of the expanding sample edge-on. X-rays that pass through and around the plasma are simultaneously measured on high resolution crystal spectrometers, and the opacity is measured by comparing the direct and attenuated x-ray spectra. Plasma density is determined from the spatial extent of the expanded plasma, and plasma temperature is inferred from the ionization distribution of the low-Z ions doped in the plasma. Predictions of the high-Z opacity are then compared with data using measured conditions as input. These are the first high temperature opacity measurements in which samples conditions are simultaneously determined. We present measurements and predictions for a spectroscopic experiment using a comixture of aluminum and niobium. We discuss plans for future improvements, and for spectroscopic measurements in the spectral region determining Rosseland mean opacities. 5 refs., 6 figs.

8318 (UW-CPTC-91-18) **Transport processes in magnetically confined plasmas.** Callen, J.D. Wisconsin Univ., Madison, WI (United States). Dec 1991. 41p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-86ER53218. (CONF-9111127-4: 33. annual Division of Plasma Physics/American Physical Society (DPP/APS) meeting, Tampa, FL (United States), 4-8 Nov 1991). Order Number DE92004746. Source: OSTI; NTIS; INIS; GPO Dep.

Intensified studies of plasma transport in toroidal plasmas over the past three to five years have progressed through increased understanding in some areas and changed perceptions about the most important issues in other areas. Recent developments are reviewed for six selected topics: edge fluctuations and transport; L-H mode transition; core fluctuations; modern plasma turbulence theory; transient transport; and global scaling. Some of the developments that are highlighted include: the role of a strongly sheared poloidal flow in edge plasma turbulence, transport and the L-H transition; change of focus from $\kappa_\perp \rho_s \sim 1$ to $\kappa_\perp \rho_s \ll 1$ fluctuations in tokamak plasmas; modern Direct-Interaction-Approximation plasma turbulence and hybrid fluid/kinetic theoretical models; and transient transport experiments that are raising fundamental questions about our conceptions of local transport processes in tokamaks. 104 refs., 6 figs.

8319 (ANL/CP-70626) **Activation analyses for different fusion structural alloys.** Attaya, H.; Smith, D. Argonne National Lab., IL (United States). [1991]. 17p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. (CONF-911111-13: International conference on fusion reactor materials, Clearwater, FL (United States), 17-22 Nov 1991). Order Number DE92004143. Source: OSTI; NTIS; INIS; GPO Dep.

The leading candidate structural materials, viz., the vanadium alloys, the nickel or the manganese stabilized austenitic steels, and the ferritic steels, are analysed in terms of their induced activation in the TPSS fusion power reactor. The TPSS reactor has 1950 MW fusion power and inboard and outboard average neutron wall loading of 3.75 and 5.35 MW/m^2 respectively. The results shows that, after one year of continuous operation, the vanadium alloys have the least radioactivity at reactor shutdown. The maximum difference between the induced radioactivity in the vanadium alloys and in the other iron-based alloys occurs at about 10 years after reactor shutdown. At this time, the total reactor radioactivity, using the vanadium alloys, is about two orders of magnitude less than the total reactor radioactivity utilizing any other alloy. The difference is even larger in the first wall, the FW-vanadium activation is 3 orders of magnitude less than other alloys' FW activation. 2 refs., 7 figs.

8320 (ANL/CP-72699) **Tritium production, management and its impact on safety for a D-^{3}He fusion reactor.** Sze, D.K. (Argonne National Lab., IL (United States)); Herring, S.; Sawan, M. Argonne National Lab., IL (United States). Nov 1991. 7p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. (CONF-910920-8: 4. topical meeting on tritium technology in fission, fusion, and isotopic applications, Albuquerque, NM (United States), 30 Sep - 4 oct 1991). Order Number DE92004144. Source: OSTI; NTIS; INIS; GPO Dep.

About three percent of the fusion energy produced by a D-^{3}He reactor is in the form of neutrons. Those neutrons are generated by D-D and D-T reactions, with the tritium produced by the D-D fusion. The neutrons will react with structural steel, deuterium, ^{3}He and shielding material to produce tritium. About half of the tritium generated by the D-D reaction will not burn in the plasma and will exit as a part of the plasma exhaust. Thus, there is enough tritium produced in a D-^{3}He reactor and careful management will be required. The tritium produced in the shield and plasma can be managed with an acceptable effect on cost and safety. 3 refs., 2 figs., 3 tabs.

8321 (ANL/CP--72824) **Analysis of sweeping heat loads on divertor plate materials.** Hassanein, A. Argonne National Lab., IL (United States). [1991]. 16p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. (CONF-911111--12: International conference on fusion reactor materials, Clearwater, FL (United States), 17-22 Nov 1991). Order Number DE92004145. Source: OSTI; NTIS; INIS; GPO Dep.

The heat flux on the divertor plate of a fusion reactor is probably one of the most limiting constraints on its lifetime. The current heat flux profile on the outer divertor plate of a device like ITER is highly peaked with narrow profile. The peak heat flux can be as high as 30--40 MW/m^2 with full width at half maximum (FWHM) is in the order of a few centimeters. Sweeping the separatrix along the divertor plate is one of the options proposed to reduce the thermomechanical effects of this highly peaked narrow profile distribution. The effectiveness of the sweeping process is investigated parametrically for various design values. The optimum sweeping parameters of a particular heat load will depend on the design of the divertor plate as well as on the profile of such a heat load. In general, moving a highly peaked heat load results in substantial reduction of the thermomechanical effects on the divertor plate. 3 refs., 8 figs.

8322 (ANL/CP--72828) **Thermal response of substrate structural materials during a plasma disruption.** Hassanein, A.; Smith, D.L. Argonne National Lab., IL (United States). [1991]. 18p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. (CONF-911111--10: International conference on fusion reactor materials, Clearwater, FL (United States), 17-22 Nov 1991). Order Number DE92004147. Source: OSTI; NTIS; INIS; GPO Dep.

Intense energy fluxes to in-vessel components like the first wall and the divertor plate of a fusion reactor are expected during plasma disruptions. This high energy deposition in short times may cause severe surface erosion of these components resulting from melting and vaporization. Coatings and tile materials are proposed to protect and maintain the integrity of the underneath structural materials from both erosion losses as well as from high thermal stresses encountered during a disruption. The coating thickness should be large enough to withstand both erosion losses and to reduce the temperature rise in the substrate structural material. Yet the coating thickness should be minimized to reduce potential problems from radioactivity, toxicity, and plasma contamination. Tile materials such as graphite and coating materials such as tungsten and beryllium on structural materials like copper and steel are analyzed as potential divertor and first wall design options. The disruption is assumed to be composed of two phases: a thermal quench phase followed by a current quench phase. The minimum coating thickness required to protect the structural material is discussed for range of disruption parameters. 7 refs., 8 figs.

8323 (ANL/CP--72864) **Tritium transport in lithium ceramics porous media.** Tam, S.W.; Ambrose, V. Argonne National Lab., IL (United States). [1991]. 19p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. (CONF-911111--11: International conference on fusion reactor materials, Clearwater, FL (United States), 17-22 Nov 1991). Order Number DE92004146. Source: OSTI; NTIS; INIS; GPO Dep.

A random network model has been utilized to analyze the problem of tritium percolation through porous Li ceramic breeders. Local transport in each pore channel is described by a set of convection-diffusion-reaction equations. Long range transport is described by a matrix technique. The heterogeneous structure of the porous medium is accounted for via Monte Carlo methods. The model was then applied to an analysis of the relative contribution of diffusion and convective flow to tritium transport in porous lithium ceramics. 15 refs., 4 figs.

8324 (ANL/CP--74797) **Measured fast-neutron activation cross sections of Ag, Cu, Eu, Fe, Hf, Ni, Tb and Ti at 10.3 and 14.8 MeV and for the continuum neutron spectrum produced by 7-MeV deuterons on a thick Be-metal target.** Meadows, J.W. (Argonne National Lab., IL (United States)); Smith, D.L.; Greenwood, L.R.; Haight, R.C.; Ikeda, Y.; Konno, C. Argonne National Lab., IL (United States). [1991]. 22p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38 ;W-7405-ENG-36. (CONF-9110261--3: International Nuclear Energy Agency nuclear data committee meeting, Karlsruhe (Germany), 19-26 Oct 1991). Order Number DE92003999. Source: OSTI; NTIS; INIS; GPO Dep.

Four identical sample packets containing elemental Ag, Cu, Eu, Fe, Hf, Ni, Tb and Ti have been irradiated in three distinct accelerator neutron fields, at Argonne National Laboratory and Los Alamos National Laboratory, USA, and Japan Atomic Energy Research Institute, Tokai, Japan, under the auspices of an International Atomic Energy Agency Coordinated Research Program to investigate the production of long-lived radionuclides for fusion waste disposal applications. Final experimental results are presented here for 13 distinct reactions which ultimately lead to production of the following activities: Ag-106m,108m; Co-60g; Cr-51; Eu-150g, -152g; Hf-175,-179m2; Mn-54; Sc-46g,-47,-48; Tb-158g. The neutron fluence standard used was Ni-58(n,p)Co-58. The measured data include differential cross section values at 10.3 and 14.8 MeV, and integral cross sections for the continuum neutron spectrum produced by 7-MeV deuterons incident on a thick Be-metal target. The U-238(n,f) cross section was also measured at 10.3 MeV as a consistency check on the experimental technique. Some of the results of this study are compared with corresponding values from earlier work at Argonne and from ENDF/B-6. 134 refs., 1 fig., 9 tabs.

8325 (ANL/FPP/TM--257) **The measurement of gamma ray induced heating in a mixed neutron and gamma ray environment.** Chiu, H.K. Argonne National Lab., IL (United States). Oct 1991. 166p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. Order Number DE92006457. Source: OSTI; NTIS; INIS; GPO Dep.

The problem of measuring the gamma heating in a mixed DT neutron and gamma ray environment was explored. A new detector technique was developed to make this measurement. Gamma heating measurements were made in a low-Z assembly irradiated with 14-Mev neutrons and (n, n′) gammas produced by a Texas Nuclear Model 9400 neutron generator. Heating measurements were made in the mid-line of the lattice using a proportional counter operating in the Continuously-varied Bias-voltage Acquisition mode. The neutron-induced signal was separated from the gamma-induced signal by exploiting the signal rise-time differences inherent to radiations of different linear energy transfer coefficient, which are observable in a proportional counter. The operating limits of this measurement technique were explored by varying the counter position in the low-Z lattice, hence changing the irradiation spectrum observed. The experiment was modelled numerically to help interpret the measured results. The transport of neutrons and gamma rays in the assembly was modelled using the one- dimensional radiation transport code ANISN/PC. The cross-section set used for these calculations was derived from the ENDF/B-V library using the code MC^2-2 for the case of DT neutrons slowing down in a low-Z material. The calculated neutron and gamma spectra in the slab and the relevant mass-stopping powers were used to construct weighting factors which relate the energy deposition in the counter fill-gas to that in the counter wall and in the surrounding material. The gamma energy deposition at various positions in the lattice is estimated by applying these weighting factors to the measured gamma energy deposition in the counter at those locations.

8326 (CONF-911111--18) **The effect of neutron irradiation on the structure and properties of carbon-carbon composite materials.** Burchell, T.D.; Eatherly, W.P.; Robbins, J.M.; Strizak, J.P. Oak Ridge National Lab., TN (United States). [1991]. 18p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From International conference on fusion reactor materials; Clearwater, FL (United States); 17-22 Nov 1991. Order Number DE92005121. Source: OSTI; NTIS; INIS; GPO Dep.

Carbon-based materials are an attractive choice for fusion reactor plasma facing components (PFCs) because of their low atomic number, superior thermal shock resistance, and low neutron activation. Next generation plasma fusion reactors, such as the International Thermonuclear Experimental Reactor (ITER), will require advanced carbon-carbon composite materials possessing extremely high thermal conductivity to manage the anticipated severe heat loads. Moreover, ignition machines such as ITER will produce high neutron fluxes. Consequently, the influence of neutron damage on the structure and properties of carbon-carbon composite materials must be evaluated. Data from an irradiation experiment are reported and discussed here. Fusion relevant graphite and carbon-carbon composites were irradiated in a target capsule in the High Flux Isotope Reactor (HFIR) at Oak Ridge National Laboratory (ORNL). A peak damage dose of 1.59 dpa at 600°C was attained. The carbon materials irradiated included nuclear graphite grade H-451 and one-, two-, and three-directional carbon-carbon composite materials. Dimensional changes, thermal conductivity and strength are reported for the materials examined. The influence of fiber type, architecture, and heat treatment temperature on properties and irradiation behavior are reported. Carbon-Carbon composite dimensional changes are interpreted in terms of simple microstructural models.

8327 (DOE/ER/52111–3) **Application of railgun principle to high-velocity hydrogen pellet injection for magnetic fusion reactor refueling: Technical progress report, [July 16, 1990–August 16, 1991].** Kim, K. Illinois Univ., Urbana, IL (United States). Dept. of Electrical and Computer Engineering. Aug 1991. 204p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-84ER52111. Order Number DE92004202. Source: OSTI; NTIS; INIS; GPO Dep.

This report contains three documents describing the progress made by the University of Illinois electromagnetic railgun program sponsored by the Office of Fusion Energy of the United States Department of Energy during the period from July 16, 1990 to August 16, 1991. The first document contains a brief summary of the tasks initiated, continued, or completed, the status of major tasks, and the research effort distribution, estimated and actual, during the period. The second document contains a description of the work performed on time resolved laser interferometric density measurement of the railgun plasma-arc armature. The third document is an account of research on the spectroscopic measurement of the electron density and temperature of the railgun plasma arc.

8328 (DOE/ER/52143–T1) **Damage analysis and fundamental studies for fusion reactor materials development: Progress report, December 1, 1986–December 31, 1990.** Odette, G.R.; Lucas, G.E. California Univ., Santa Barbara, CA (United States). Dept. of Chemical and Nuclear Engineering. Sep 1991. 6p. Sponsored by U.S. DOE Energy Research. DOE Contract FG03-87ER52143. Order Number DE92004308. Source: OSTI; NTIS; INIS; GPO Dep.

The philosophy of the program at the University of California Santa Barbara has been to develop a fundamental understanding of both the basic damage processes and microstructural evolution that take place in a material during neutron irradiation and the consequent dimensional and mechanical property changes. This fundamental understanding can be used in conjunction with empirical data obtained from a variety of irradiation facilities to develop physically-based models of neutron irradiation effects in structural materials. The models in turn can be used to guide alloy development and to help extrapolate the irradiation data base (expected to be largely fission reactor based) to the fusion reactor regime. This philosophy is consistent with that of the national and international programs for developing structural materials for fusion reactors.

8329 (DOE/ER/52154–T4) **Code development incorporating environmental, safety, and economic aspects of fusion reactors (FY 89–91): Final report.** Ho, S.K.; Fowler, T.K.; Holdren, J.P. (eds.). California Univ., Berkeley, CA (United States). Berkeley Fusion Engineering. Nov 1991. 167p. Sponsored by U.S. DOE Energy Research. DOE Contract FG03-89ER52154. (UC-BFE–027). Order Number DE92004060. Source: OSTI; NTIS; INIS; GPO Dep.

This report discusses the following aspects of Fusion reactors.: Activation Analysis; Tritium Inventory; Environmental and Safety Indices and Their Graphical Representation; Probabilistic Risk Assessment (PRA) and Decision Analysis; Plasma Burn Control – Application to ITER; and Other Applications.

8330 (DOE/ER/53222–106) **The neutral hydrogen beam experiment in the Columbia High Beta Tokamak "HBT": Part 1, The design of the beam system: Part 2, The orbit simulation of fast ions.** Wang, Jian-Hua; Marshall, T.C. Columbia Univ., New York, NY (United States). Plasma Physics Lab. 1991. 99p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-86ER53222. Order Number DE92003987. Source: OSTI; NTIS; INIS; GPO Dep.

This report discusses the design of the beam system and the orbit simulation of fast ions in the Columbia High Beat Tokamak. (LSP).

8331 (DOE/ER/53264–1) **Experimental investigations of ICRF effects: Annual performance report, November 1990–June 1991.** Wisconsin Univ., Madison, WI (United States). Phaedrus Lab. for Plasma Science. [1991]. 30p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-88ER53264. Order Number DE92004396. Source: OSTI; NTIS; INIS; GPO Dep.

The goal of the Phaedrus program is to establish the relative efficiency of helicity and momentum current drive for rf near and below omega$_{ci}$ and compare to theory. This paper discusses major accomplishments in the rf program; extension of operating parameters; facility improvements; and additional experimental activities. (LSP)

8332 (ECN-C–91-018) **Measurements of ac losses in NET prototype OH conductors.** Eikelboom, J.A. Netherlands Energy Research Foundation, Petten (Netherlands). Mar 1991. 29p. Contract no. 351/88-12/FU-NL(NET No.88-186). Order Number DE92614526. Source: OSTI; NTIS (US Sales Only); INIS.

This work has been performed under NET Contract during the period March 1989 and January 1991.

Ac loss measurements have been performed in samples of a prototype conductor being developed for application in the central solenoid of NET. Two types of losses have been measured: hysteresis losses in the strand, and coupling losses in the strand, subcables and full size conductor. (H.W.). 1 ref.; 12 figs.; 17 tabs.

8333 (ENEA-RT-NUCL–90-04, pp. 41-44) **Equilibrium beta limit and alpha particle containment in stellarators as function of their aspect ratio.** Alladio, F.; Batistoni, P.; Crisanti, F.; Mancuso, S. ENEA, Frascati (Italy). Area Nucleare. 1990. (CONF-900602–: 17. European Physical Society (EPS) conference on controlled fusion and plasma heating, Amsterdam (Netherlands), 25-29 Jun 1990). In *Contributions to 17th EPS conference on controlled fusion and plasma heating.* 60p. Order Number DE92743986. Source: OSTI; NTIS (US Sales Only).

From 17th EPS conference on controlled fusion and plasma heating; Amsterdam, Netherlands (25-29 Jun 1990).

The possibility of designing stellarator or torsatron configurations at low aspect ratio remains and ambitious goal. The advantages of such an approach are the high use of the magnetic field volume, the reduced space taken by the winding and the computed equilibrium and ideal stability high beta limit, whereas the disadvantages are the increased fast particle losses. The choice of the winding law for the helicoidal coils is certainly the most critical tool for maximizing the advantages and minimizing the disadvantages. The choice of winding the helicoidal currents on circular cross-section tori with constant pitch in toroidal coordinates has turned out to be a rewarding one. It allows a fully analytical treatment of the 1-D vacuum fields and permits easy access to low aspect ratio configurations. This paper attempts a systematic scan in the aspect ratio of idealized stellarators, with fixed poloidal (m=2) number and 5T toroidal field at $R=R_0=2m$ (concentration point of the toroidal coordinates); the helicoidal currents are surface currents flowing with costant pitch in toroidal coordinates on circular cross-section tori of major and minor radius.

8334 (ENEA-RT-NUCL–90-15) **ENEA-Frascati inertial confinement fusion: Multi-channel digitizer control, acquisition and analysis system.** Caruso, A.; Strangio, C.; Elman, G.; Hugh, J. Mc; Rogers, G.; Pastina, E.; Raimondi, F.; Umbro, A. ENEA, Frascati (Italy). Area Nucleare. Sep 1991. 85p. (RT/NUCL–90-15). Order Number DE92743981. Source: OSTI; NTIS (US Sales Only).

The ICF (Inertial Confinement Fusion) data acquisition and analysis system described in this paper incorporates digitizer channels, signal switching, an instrument controller, a graphic hardcopy unit, laser printer and software. The digitizers, signal switching and instrument controller are standard components appropriate to acquire the single fast shot signals (rise-time: from about 100 picoseconds to nanoseconds). The input signals are switched to the digitizers through the TSI-8150 test system interface by TSS40 switch controller cards and TSS46 18GHz microwave switches. Graphic hardcopy is accomplished using either a 4693PX colour hardcopy unit or a laser printer connected through a printer spooler/ multiplexer. The software is based on an existing package from Ressler called RAI/DAC reviewed by Fus-Inerz and Tektronix-Italy to define the modifications needed for data acquisition and handling. The adopted software solution is based on an IBM PC compatible instrument controller running software developed by Ressler Associates.

8335 (ENEA-RT-NUCL–90-28) **FT Tokamak Upgrade (FTU) vacuum vessel section cleaning by glow discharge in hydrogen.** Ciotti, M.; Apicella, M.L.; Verdini, L.; Ferro, C. ENEA, Frascati (Italy). Area Nucleare. Sep 1991. 20p. (RT/NUCL–90-28). Order Number DE92744032. Source: OSTI; NTIS (US Sales Only).

The possibility of applying glow discharge in hydrogen for the cleaning of the FTU (Frascati Tokamak Upgrade) vacuum chamber was analyzed on a 1:1 scale toroidal section by using the same operating conditions as foreseen for the machine. The discharge was maintained for six hours in the chamber with the wall temperature kept at 150 degrees C. The partial pressures at the end of the cleaning run were compared with those obtained by using only thermal outgassing at the same temperature. A reduction of about a factor of two in the H_20 and $C0_2$ partial pressures was observed, related to a better cleanness of the surface. It was found that the high temperature during the glow discharge cleaning not only increases the efficiency of the discharge, but it is an efficient tool to remove impurities from the hidden regions, defined by the thermal shields that cover all the vacuum vessel walls not directly exposed to the glow discharge.

8336 (ENEA-RT-NUCL–90-36) **Rayleigh-Taylor instability on high gain target for heavy ion beam fusion.** Caruso, A.; Pais, V.A.; Parodi, A. ENEA, Frascati (Italy). Dipt. Fusione. 1991. 20p. (RT/NUCL–90-36). Order Number DE92744003. Source: OSTI; NTIS (US Sales Only).

A numerical analysis was carried out on the stability of targets designed to produce fusion energy gains close to 100 when irradiated with an appropriate heavy ion beam. To reach such performances, it was found that a high-Z radiation shield was necessary to screen the DT fuel from the radiation coming from the surrounding hot material. Since high-Z material opacity is only weakly density dependent, the analysis considered targets with lead shields both at solid density and with a density equivalent to that of the contiguous external material. The behaviour of both these kinds of targets was studied by introducing a small spatial non-uniformity on the external surface of the lead shielding. Targets with low-density shields were also tested with a beam intensity perturbation. Since density gradients were very sharp and ablation was practically absent, these implosions were found to be Rayleigh-Taylor unstable. With the use of the full hydrodynamic-radiative model with a non-linear heavy ion energy deposition and mesh correction, it was possible, to follow the evolution in the non-linear regime.

8337 (ENEA-RT-NUCL–90-41) **Superconducting coil: Use of super elements.** Della Corte, A.; Di Pietro, E. ENEA, Frascati (Italy). Dipt. Fusione. May 1991. 14p. (CONF-9005399–1: 1990 ABAQUS, New Port, RI (United States), 30 May 1990; RT/NUCL–90-41). Order Number DE92744008. Source: OSTI; NTIS (US Sales Only).

From 1990 ABAQUS; New Port, Rhode Island, USA (30 May-1 June 1990).

Within the framework of a R and D program on the possible configuration of the superconducting cable that can be used on the NET (Next European Torus), ENEA (Italian Commission for Nuclear and Alternative Energy Sources) has decided to start the project of a model coil using CICC (Cable-In-Conduit Conductors) turns. The CICC is a cable configuration (HOENIG,1985) first utilized by Westinghouse for the construction of one of the six coils of LCT (Large Coil Task). The ENEA CICC will be composed of 135 Nb3Sn strands (each of them with 19 wires) sandwiched between two Cu+CuSn stabilizing elements, clamped on a copper tube, encased in a steel jacket and filled, during operation, with supercritical helium at 4.5 K and 0.8 MPa. This paper describes the stress analysis of the superconducting coil under the effect of Lorentz forces. Due to the high number of turns (286) in the coil and the conductor complexity (geometry, materials, and loads), the analysis was performed by taking advantage of the SUPERELEMENT code option recently introduced in the 4.7 ABAQUS version. The results of this analysis are compared with the results obtained using ordinary material homogenization techniques.

8338 (ENEA-RT-NUCL–90-44) **High gain ICF implosion symmetry requirements.** Atzeni, S. ENEA, Frascati (Italy). Area Nucleare. Jun 1991. 14p. (CONF-9011184–2: 1990 international symposium on heavy ion fusion, Monterey, CA (United States), 6-9 Nov 1990; RT/NUCL–90-44). Order Number DE92744030. Source: OSTI; NTIS (US Sales Only).

From International symposium on heavy ion inertial fusion; Monterey, CA, USA (3-6 Dec 1990).

Some aspects of the problem of implosion symmetry in inertial confinement fusion (ICF) are discussed, with particular reference given to heavy ion beam fusion. The physics relative to the ignition of a target imploded by a driving pressure with long wavelength (low-mode number Legendre modes) asymmetries are studied by means of 2-D simulations. A parametric study shows that the tolerable level of non-uniformity is a decreasing function of mode number with the actual values depending on the specific target features (such as convergence ratio and ignition margin). The isobaric-fuel model of gain is then used to show how symmetry constraints (which limit the convergence ratio and the 'hohlraum' transfer efficiency) affect the fuel energy gain. By using a model of ion beam energy conversion to X-rays, the gain of a class of indirectly driven targets is also estimated as a function of the relevant beam parameters.

8339 (ENEA-RT-NUCL–90-48) **High performance, long pulse, tokamak.** Tanga, A.; Roccella, M.; Tubbing, B.J.D.; Sack, C.H.; Bosia, G.; Sborchia, C. ENEA, Frascati (Italy). Area Nucleare; Ansaldo SpA, Genoa (Italy). Research Div. Jun 1991. 61p. (RT/NUCL–90-48). Order Number DE92744029. Source: OSTI; NTIS (US Sales Only).

The key design and performance characteristics of a proposed high performance, long pulse tokamak (HLT) are described. The main parameters of the machine are: major radius, 3.4 m; minor radius, 1.2 m; elongation, 2; maximum toroidal field on axis, 8.3 T; maximum plasma current, 20 MA. The discharge flat top length is 40 s for a plasma with a 20 MA inductively driven current at a toroidal field of 8.0 T, and 500 s for a discharge with a 7 MA non-inductively driven current at a field of 3.5 T. With HLT, the main physics issues for a fusion reactor can be assessed: plasma physics and plasma operation in the ignited and sub-ignited regimes; burn stabilization; behaviour of divertor components under long-pulse thermal loads; and semi-continuous operation with non-inductive current drive. The crucial element in obtaining this level of performance in a machine of medium size is the use of active cooling with liquid nitrogen both for the toroidal field coils and the central solenoid. The toroidal field coils have a pure copper conductor in a stainless steel casing. The stress in the copper does not exceed a relatively conservative limit of 180 MPa.

8340 (GA-A–20570) **DIII-D radiation shielding procedures and experiences.** Taylor, P.L. General Atomics, San Diego, CA (United States). Nov 1991. 4p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-89ER51114. (CONF-910968–49: 14. IEEE symposium on fusion engineering, San Diego, CA (United States), 30 Sep - 3 oct 1991). Order Number DE92004296. Source: OSTI; NTIS; INIS; GPO Dep.

The D3-D tokamak operates with a neutron radiation shield to allow enhanced plasma operations with increased neutron production while minimizing the site boundary dose level. Neutron rates as high as 4×10^{15} neutrons/s and total neutron production as high as 4 x 10^{15} neutrons per shot are obtained while maintaining the site dose below the DOE administrative level of 20 mrem per year; a much more restrictive level than the State of California radiation limits. The radiation shielding has increased by a factor of 300 over the preshield value and is in agreement with the design calculation. The maximum site neutron dose since installation of the shield has been less than 0.03 mrem for a shot and less than 0.4 mrem for a day. The site neutron and gamma dose are monitored continuously during operations by a PC-based computer system that provides the means of measuring the low dose levels that occur during a shot by including postshot background subtraction. The neutron and gamma dose are measured and archived by shot, hour, and day in a database. Activation of the machine after a run day and during vessel entries is monitored and the activated nuclides have been determined. A radiation monitoring program and procedures are used to control the exposures to facility personnel and the exposure at the site boundary.

8341 (GA-A–20587) **Optimization of thermal design for nitrogen shield of JET cryopump.** Baxi, C.B. (General Atomics, San Diego, CA (United States)); Obert, W. General Atomics, San Diego, CA (United States). Nov 1991. 4p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-89ER51114. (CONF-910968–50: 14. IEEE symposium on fusion engineering, San Diego, CA (United States), 30 Sep - 3 oct 1991). Order Number DE92004295. Source: OSTI; NTIS; INIS; GPO Dep.

The reference design of JET cryopump nitrogen shield consists of an outer section made of copper chevrons fastened to two cooling tubes and an inner stainless steel section and backing plate with two cooling tubes. These tubes are fed in a parallel flow arrangement. The inlet flow is divided into two parallel paths so that both tubes on either section are always at the same temperature. This arrangement was selected due to concern about conduction between warm and cold parts of the shield during cooldown transients. If the heat loads are unequal, such a parallel flow arrangement can result in flow starvation in the path with higher heat load. This will cause large temperature differences and, ultimately, structural failure. Hence, an analysis was undertaken to investigate the conduction effects in the shield for other flow arrangements. 4 refs., 8 figs.

8342 (GA-A–20607) **Design of the advanced divertor pump cryogenic system for DIII-D.** Schaubel, K.M. (General Atomics, San Diego, CA (United States)); Baxi, C.B.; Campbell, G.L.; Gootgeld, A.M.; Langhorn, A.R.; Laughon, G.J.; Smith, J.P.; Anderson, P.M.; Menon, M.M. General Atomics, San Diego, CA (United States). Nov 1991. 4p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-89ER51114. (CONF-910968–53: 14. IEEE symposium on fusion engineering, San Diego, CA (United States), 30 Sep - 3 oct 1991). Order Number DE92004288. Source: OSTI; NTIS; INIS; GPO Dep.

The design of the cryogenic system for the D3-D advanced divertor cryocondensation pump is presented. The advanced divertor incorporates a baffle chamber and bias ring located near the bottom of the D3-D vacuum vessel. A 50,000 l/s cryocondensation pump will be installed underneath the baffle for plasma particle exhaust. The pump consists of a liquid helium cooled tube operating at 4.3°K and a liquid nitrogen cooled radiation shield. Liquid helium is fed by forced flow through the cryopump. Compressed helium gas flowing through the high pressure side of a heat exchanger is regeneratively cooled by the two-phase helium leaving the pump. The cooled high pressure gaseous helium is than liquefied by a Joule-Thomson expansion valve. The liquid is returned to a storage dewar. The liquid nitrogen for the radiation shield is supplied by forced flow from a bulk storage system. Control of the cryogenic system is accomplished by a programmable logic controller.

8343 (GA-A–20617) **Glow discharge initiation with electron gun assist.** Holtrop, K.L.; Jackson, G.L.; Schaubel, K.M.; Kellman, A.G. General Atomics, San Diego, CA (United States). Nov 1991. 4p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-89ER51114. (CONF-910968–55: 14. IEEE symposium on fusion engineering, San Diego, CA (United States), 30 Sep - 3 oct 1991). Order Number DE92005437. Source: OSTI; NTIS; INIS; GPO Dep.

Helium glow discharge conditioning is used before every discharge in the D3-D Tokamak to desorb hydrogen and low Z impurities from the graphite and Inconel plasma facing surfaces. However high gas pressure is required to initiate each glow discharge session and this requires frequent cycling of valves to protect pressure sensitive devices. To alleviate this mechanical fatigue an electron gun assisted glow system (EAG) is being installed on the D3-D vessel to lower the initiation pressure. Through the injection of electrons the initiation pressure of the helium glow discharge has been lowered by a factor of 70, bringing the initiation pressure within a factor of 2 of the minimum sustaining pressure of the glow discharge. This might also make possible pulsed glow conditioning which would allow a lower average pressure during glow conditioning reducing the heat load on proposed cryogenic pumping panels. Experimental results of the electron assist on He glow initiation and a scaling model for the electron gun assisted glow will be presented. The electron gun can also be used as a diagnostic. Without a glow discharge, the electron gun has been pulsed into the wall and desorbed gas measured by a Residual Gas Analyzer. We are attempting to correlate the desorbed gas with recycling or vessel cleanliness.

8344 (GA-A–20632) **110 GHz ECH on DIII-D: System overview and initial operation.** Cary, W.P.; Allen, J.C.; Callis, R.W.; Doane, J.L.; Harris, T.E.; Moeller, C.P.; Nerem, A.; Prater, R.; Remsen, D. General Atomics, San Diego, CA (United States). Nov 1991. 3p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-89ER51114. (CONF-910968–52: 14. IEEE symposium on fusion engineering, San Diego, CA (United States), 30 Sep - 3 oct 1991). Order Number DE92004293. Source: OSTI; NTIS; INIS; GPO Dep.

A new high power electron cyclotron heating (ECH) system has been introduced on D3-D. This system is designed to operate at 110 GHz with a total output power of 2 MW. The system consists of four Varian VGT-8011 gyrotrons, (output power of 500 kW), and their associated support equipment. All components have been designed for up to a 10 second pulse duration. The 110 GHz system is intended to further progress in rf current drive experiments on D3-D when used in conjunction with the existing 60 GHz ECH (1.6 MW), and the 30–60 MHz ICH (2 MW) systems. H-mode physics, plasma stabilization experiments and transport studies are also to be conducted at 110 GHz. The present system design philosophy was based on experience gained from the existing 60 GHz ECH system. The consequences of these design decisions will be addressed as will the actual performance of various 110 GHz components.

8345 (GA-A–20636) **Modeling and measurement of the motion of the DIII-D vacuum vessel during vertical instabilities.** Reis, E.; Blevins, R.D.; Jensen, T.H.; Luxon, J.L.; Petersen, P.I.; Strait, E.J. General Atomics, San Diego, CA (United States). Nov 1991. 6p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-89ER51114. (CONF-910968–48: 14. IEEE symposium on fusion engineering, San Diego, CA (United States), 30 Sep - 3 oct 1991). Order Number DE92004044. Source: OSTI; NTIS; INIS; GPO Dep.

The motions of the D3-D vacuum vessel during vertical instabilities of elongated plasmas have been measured and studied over the past five years. The currents flowing in the vessel wall and the plasma scrapeoff layer were also measured and correlated to a physics model. These results provide a time history load distribution on the vessel which were input to a dynamic analysis for correlation to the measured motions. The structural model of the vessel using the loads developed from the measured vessel currents showed that the calculated displacement history correlated well with the measured values. The dynamic analysis provides a good estimate of the stresses and the maximum allowable deflection of the vessel. In addition, the vessel motions produce acoustic emissions at 21 Hertz that are sufficiently loud to be felt as well as heard by the D3-D operators. Time history measurements of the sounds were correlated to the vessel displacements. An analytical model of an oscillating sphere provided a reasonable correlation to the amplitude of the measured sounds. The correlation of the theoretical and measured vessel currents, the dynamic measurements and analysis, and the acoustic measurements and analysis show that: (1) The physics model can predict vessel forces for selected values of plasma resistivity. The model also predicts poloidal and toroidal wall currents which agree with measured values; (2) The force-time history from the above model, used in conjunction with an axisymmetric structural model of the vessel, predicts vessel motions which agree well with measured values; (3) The above results, input to a simple acoustic model predicts the magnitude of sounds emitted from the vessel during disruptions which agree with acoustic measurements; (4) Correlation of measured vessel motions with structural analysis shows that a maximum vertical motion of the vessel up to 0.24 in will not overstress the vessel or its supports. 11 refs., 10 figs., 1 tab.

8346 (GA-A–20750) **Initial boronization of the DIII-D tokamak.** Phillips, J.; Hodapp, T.; Holtrop, K.; Jackson, G.; Winter, J. General Atomics, San Diego, CA (United States). Oct 1991. 14p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-89ER51114. (CONF-911132–9: 38. national symposium of the American Vacuum Society, Seattle, WA (United States), 11-15 Nov 1991). Order Number DE92004457. Source: OSTI; NTIS; INIS; GPO Dep.

A system has been installed to deposit a thin film of elemental boron to the walls of the D3-D tokamak, in order to reduce the influx of impurities during plasma discharges. Subsequently new regimes of substantially tokamak energy confinement were obtained. The deposition of the boron layer is achieved during a glow-discharge session using a helium-diborane age mixture and a film of $\approx$100 nm is deposited. The boronization system includes special storage and handling precautions for the diborane, a delivery and metering system for the glow-discharge, modifications to the tokamak's residual gas analyzer system, and a dedicated system for handling and neutralizing the exhaust gas from the tokamak. Tokamak discharges with similar parameters before and after boronization are used to characterize the effects of the boron film. Nickel has been reduced by a factor of 30, while impurities such as oxygen and carbon are reduced fivefold. A system of pulsing the flow discharge has been developed in order to improve the uniformity of the film applied.

8347 (IAEA-TECDOC–604, pp. 159-174) **The Proto-ETA small-aspect-ratio experiment.** Ludwig, G.O. (Instituto Nacional de Pesquisas Espaciais, Sao Jose dos Campos (Brazil). Lab. Associado de Plasma); Aso, Y.; Barroso, J.J. International Atomic Energy Agency, Vienna (Austria). May 1991. (CONF-9009463–: Technical committee on research using small tokamaks, Arlington, VA (United States), 27 Sep 1990). In *Research using small tokamaks: Proceedings of a technical committee meeting held in Arlington, Virginia, USA, 27-28 September 1990.* 198p. Order Number DE92615416. Source: OSTI; NTIS (US Sales Only); INIS.

Proto-ETA is a small-aspect-ratio tokamak (or "spherical torus") currently under design at the "Instituto Nacional de Pesquisas Espaciais" (National Institute for Space Research - INPE) in collaboration with Oak Ridge National Laboratory. The main objective of the device is to characterize the properties and the performance of low-aspect-ratio tokamak plasmas at relevant current and temperatures. This paper reports the current status of the conceptual design and discusses the models used to predict the operational regime and to design the main components of the device. (author). 15 refs, 12 figs, 2 tabs.

8348 (IAEA-TECDOC–604, pp. 189-193) **Design and fabrication of the HBT-EP tokamak: A large-aspect ratio, high beta, 10 msec pulsed tokamak.** Mauel, M.E. (Columbia Univ., New York, NY (United States). Plasma Physics Lab.); Gates, D.; Kombargi, R.; Navratil, G.A.; Vijaya Sankar, M.K. International Atomic Energy Agency, Vienna (Austria). May 1991. (CONF-9009463–: Technical committee on research using small tokamaks, Arlington, VA (United States), 27 Sep 1990). In *Research using small tokamaks: Proceedings of a technical committee meeting held in Arlington, Virginia, USA, 27-28 September 1990.* 198p. Order Number DE92615416. Source: OSTI; NTIS (US Sales Only); INIS.

An upgrade of the Columbia HBT tokamak is now under construction. Called HBT-EP (for extended pulse), it uses the toroidal field coil set from the former CLEO tokamak/stellarator at Culham which, together with the HBT power supplies, permits significantly extended performance over the HBT device. HBT-EP will have a major radius of R=0.92m, an aspect ratio between 6 and 7, a toroidal field capacity to 1 T, and an ohmic pulse length of $\geq$ 10 msec. Other key features of the device include (1) an adjustable internal conducting shell for external mode stability studies, (2) a variable plasma cross-section, and ultimately, (3) 2 MW of pulsed ICRF heating for pressure profile control and adjustment. Since HBT-EP is presently under construction, this report emphasizes our design procedure and calculations. Since HBT-EP is pulsed and designed to operate at high density, a rapid high-voltage start-up technique and a very low impurity environment are needed. A novel segmented vacuum chamber has been designed to be compatible with these requirements as well as the need for easy assembly. (author). 9 refs, 4 figs.

8350 (INIS-mf–13062) **ITER plasma facing components.** ITER documentation series. Kuroda, T. (and others); Vieider, G.; Akiba, M. International Atomic Energy Agency, Vienna (Austria). Oct 1991 148p. Order Number DE92615478. Source: OSTI; NTIS (US Sales Only); INIS.

This document summarizes results of the Conceptual Design Activities (1988-1990) for the International Thermonuclear Experimental Reactor (ITER) project, namely those that pertain to the plasma facing components of the reactor vessel, of which the main components are the first wall and the divertor plates. After an introduction and an executive summary, the principal functions of the plasma-facing components are delineated, i.e., (i) define the low-impurity region within which the plasma is produced, (ii) absorb the electromagnetic radiation and charged-particle flux from the plasma, and (iii) protect the blanket/shield components from the plasma. A list of critical design issues for the divertor plates and the first wall is given, followed by discussions of the divertor plate design (including the issues of material selection, erosion lifetime, design concepts, thermal and mechanical analysis, operating limits and overall lifetime, tritium inventory, baking and conditioning, safety analysis, manufacture and testing, and advanced divertor concepts) and the first wall design (armor material and design, erosion lifetime, overall design concepts, thermal and mechanical analysis, lifetime and operating limits, tritium inventory, baking and conditioning, safety analysis, manufacture and testing, an alternative first wall design, and the limiters used instead of the divertor plates during start-up). Refs, figs and tabs.

8351 (INIS-mf–13063) **ITER fuel cycle.** ITER documentation series. Leger, D. (and others); Dinner, P.; Yoshida, H. International Atomic Energy Agency, Vienna (Austria). Nov 1991 221p. Order Number DE92615479. Source: OSTI; NTIS (US Sales Only); INIS.

Resulting from the Conceptual Design Activities (1988-1990) by the parties involved in the International Thermonuclear Experimental Reactor (ITER) project, this document summarizes the design requirements and the Conceptual Design Descriptions for each of the principal subsystems and design options of the ITER Fuel Cycle conceptual design. The ITER Fuel Cycle system provides for the handling of all tritiated water and gas mixtures on ITER. The system is subdivided into subsystems for fuelling, primary (torus) vacuum pumping, fuel processing, blanket tritium recovery, and common processes (including isotopic separation, fuel management and storage, and processes for detritiation of solid, liquid, and gaseous wastes). After an introduction describing system function and conceptual design procedure, a summary of the design is presented including a discussion of scope and main parameters, and the fuel design options for fuelling, plasma chamber vacuum pumping, fuel cleanup, blanket tritium recovery, and auxiliary and common processes. Design requirements are defined and design descriptions are given for the various subsystems (fuelling, plasma vacuum pumping, fuel cleanup, blanket tritium recovery, and auxiliary/common processes). The document ends with sections on fuel cycle design integration, fuel cycle building layout, safety considerations, a summary of the research and development programme, costing, and conclusions. Refs, figs and tabs.

8352 (INIS-mf–13085) **ITER newsletter. Vol. 4, no. 4.** International Atomic Energy Agency, Vienna (Austria). Sep 1991 16p. Order Number DE92615463. Source: OSTI; NTIS (US Sales Only); INIS.

Issue No. 4 of Volume 4 of the ITER Newsletter, prepared and published by the IAEA in order to disseminate news on the ITER project, reports on the following topics: (i) The fourth and final meeting of quadripartite EDA negotiators (QEN-4) on November 13 and 14, 1991 in Moscow, during which the ITER E(ngineering) D(esign) A(ctivities) Agreement was initialled, the expected ITER Council members were identified, and appreciation for the IAEA's support of the ITER project was expressed. (ii) The September meeting of the Quadripartite Engineering Design Activities Negotiators' (QEN) Working Group at the IAEA Headquarters in Vienna on September 11-13, 1991, in preparation of the aforementioned November meeting in Moscow, in which topics associated with future project implementation were addressed. (iii) The ITER Workshop on "Radiation Effects on Diagnostic Components", St. Petersburg, USSR, October 14-17, 1991, during which radiation issues affecting performance of diagnostic components were clarified, and during which it was confirmed that a large variety of irradiation facilities could be made available for testing of diagnostic materials. (iv) The "ITER Magnet R and D Workshop", September 23-27, 1991, at Naka Fusion Research Establishment, JAERI, Japan, during which preliminary designs and test programmes for C(entral) S(olenoid) and T(oroidal) F(ield) model coils were reported, and various approaches to the TF model coil's tests were presented and discussed. The plan for magnet R and D was reviewed. (v) The ITER Neutral Beam Heating, held in Moscow, October 21-23, 1991, during which the status of the neutral beam development was reviewed. The plan was formed to evolve common designs for the E(lectro) S(tatic) and E(lectro) S(tatic) Q(uadrupole) negative ion beams accelerator concepts. (vi) A two-page overview by V. Sulc of the research activity on the LiPb blanket for ITER in the nuclear research institute, REZ, CSFR.

8353 (JAERI-M–91-094) **Conceptual design of fusion experimental reactor (FER/ITER): Ion cyclotron wave system.** Kimura, Haruyuki (Japan Atomic Energy Research Inst., Naka, Ibaraki (Japan). Naka Fusion Research Establishment); Saigusa, Mikio; Saitoh, Yasushi. Japan Atomic Energy Research Inst., Tokyo (Japan). Jun 1991. 99p. Order Number DE92750949. Source: OSTI; NTIS (US Sales Only); INIS.

Conceptual design of the Ion Cyclotron Wave (ICW) system for FER and Japanese contribution to the conceptual design of the ITER ICW system are presented. A frequency range of the FER ICW system is 50-85 MHz, which covers $2\omega_{cT}$ heating, current drive by transit time magnetic pumping (TTMP) and $2\omega_{cD}$ heating. Physics analyses show that the FER and the ITER ICW systems are suitable for the central ion heating and the burn control. The launching systems of the FER ICW system and the ITER high frequency ICW system are characterized by in-port plug and ridged-waveguide-fed 5x4 phased loop array. Merits of those systems are (1) a ceramic support is not necessary inside the cryostat and (2) remote maintenance of the front end part of the launcher is relatively easy. Overall structure of the launching system is consistent with radiation shielding, cooling, pumping, tritium safety and remote maintenance. The launcher has injection capability of 20 MW in the frequency range of 50-85 MHz with the separatrix-antenna distance of 15 cm and steep scrape-off density profile of H-mode. The shape of the ridged waveguide is optimized to provide desired frequency range and power handling capability with a finite element method. Matching between the current strap and the ridged waveguide is satisfactorily good. Thermal analysis of the Faraday shield shows that high electric conductivity low Z material such as beryllium should be chosen for a protection tile of the Faraday shield. Thick Faraday shield is necessary to tolerate electromagnetic force during disruptions. R and D needs for the ITER/FER ICW systems are identified and gain from JT-60/60U ICRF experiments and operations are indicated in connection with them. (author).

8354 (JAERI-M–91-119) **Evaluation of tungsten temperature of divertor during Ex-LOCA and evaluation of corrosion depth of graphite during LOVA in fusion experimental reactor.** Ogawa, Masuro (Japan Atomic Energy Research Inst., Tokai, Ibaraki (Japan). Tokai Research Establishment); Takatsu, Hideyuki; Iida, Hiromasa; Seki, Yasushi. Japan Atomic Energy Research Inst., Tokyo (Japan). Aug 1991. 33p. (In Japanese). Order Number DE92750953. Source: OSTI; NTIS (US Sales Only); INIS.

This paper deals with the evaluation of tungsten temperature of divertor during external loss of coolant accident (Ex-LOCA) in connection with the safety design of nuclear fusion experimental reactor. The present result and the results of U.S.A. and EC are discussed in the conceptual design of International Thermonuclear Engineering Reactor (ITER), and reference LOCA temperature is recommended to be 700±100degC for divertor, lasting 7 days. Corrosion depth of graphite tile of the first wall is evaluated during loss of vacuum accident (LOVA). The corrosion depth, duration time for the corrosion, generating heat, and volume of carbon monoxide are calculated when the carbon is attacked by oxygen in the air contained in the volume of the vacuum vessel. It is found that the results are not significant if fresh air does not continue to enter the vacuum vessel. (author).

8355 (JAERI-M–91-120) **Conceptual design of SC magnet system for ITER, (1): Overview.** Yoshida, Kiyoshi (Japan Atomic Energy Research Inst., Naka, Ibaraki (Japan). Naka Fusion Research Establishment); Hasegawa, Mitsuru; Okuno, Kiyoshi; Nishi, Masataka; Takahashi, Yoshikazu; Nakajima, Hideo; Tsuji, Hiroshi. Japan Atomic Energy Research Inst., Tokyo (Japan). Aug 1991. 125p. Order Number DE92750954. Source: OSTI; NTIS (US Sales Only); INIS.

The International Thermonuclear Experimental Reactor (ITER) is an experimental thermonuclear tokamak reactor that will test basic technologies of physics. The conceptual design activity of ITER required joint international work at the Max Plank Institute for Plasma Physics in the Garching Germany from 1988 to 1990. The proposals from Japan were summarized by the Fusion Experimental Reactor (FER) Team and the Superconducting Magnet Laboratory, both of the Japan Atomic Energy Research Institute (JAERI). This paper describes the Japanese contributions to the design concepts of the magnet system for ITER. The concepts of a magnet system design originated from the test data from the Large Coil Task and the Demo Poloidal Coil programs at JAERI. Most of design concepts are adapted for an option of the ITER Magnet design. The differences between Japanese design and the other designs will be analyzed using experimental results. (author).

8356 (JAERI-M–91-121) **Conceptual design of SC magnet system for ITER, (2): Stress analysis.** Koizumi, Koichi (Japan Atomic Energy Research Inst., Naka, Ibaraki (Japan). Naka Fusion Research Establishment); Hasegawa, Mitsuru; Yoshida, Kiyoshi. Japan Atomic Energy Research Inst., Tokyo (Japan). Aug 1991. 212p. Order Number DE92750955. Source: OSTI; NTIS (US Sales Only); INIS.

The International Thermonuclear Experimental Reactor (ITER) is an experimental tokamak machine testing the basic plasma performance and technologies required for future tokamak reactor. The design proposals for the Superconducting (SC) Magnet System from Japan were summarized by the Fusion Experimental Reactor (FER) Design Team and the Superconducting Magnet Laboratory of the Japan Atomic Energy Research Institute (JAERI). This report is one of the series reports on 'Conceptual design of superconducting magnet system for ITER', and describes the major results of the stress analysis regarding the Toroidal Field (TF) coil, the Center Solenoid (CS) coil and the Equilibrium Field (EF) coil and their support structures. Among the design issues, the mechanical design of the coil system was one of the most critical items, not only because of the huge electromagnetic loads due to large size and high magnetic field, but also because of the demand of high reliability under neutron irradiation. In order to satisfy both the coil performance and the mechanical reliability, different types of conductors were employed for each coils. The mechanical behaviors and the safety margin of each coil were analyzed by using finite element method (FEM) of MSC/NASTRAN. The procedure to obtain the equivalent winding stiffness employed for the each FEM analysis is also described in this report. The details on the coil specifications, conductor design and mechanical design for each coils are described in other report of the series reports. (J.P.N.).

8357 (JAERI-M-91-122) **Conceptual design of SC magnet system for ITER, (3): AC loss.** Hasegawa, Mitsuru (Japan Atomic Energy Research Inst., Naka, Ibaraki (Japan). Naka Fusion Research Establishment); Okuno, Kiyoshi; Takahashi, Yoshikazu; Nishio, Satoshi; Yoshida, Kiyoshi. Japan Atomic Energy Research Inst., Tokyo (Japan). Aug 1991. 83p. Order Number DE92750956. Source: OSTI; NTIS (US Sales Only); INIS.

The International Thermonuclear Experimental Reactor (ITER) is an experimental thermonuclear tokamak reactor testing the basic physics performance and technologies. The joint work of the conceptual design activity of ITER was carried out at the Max Planck Institute for Plasma Physics in Garching Germany from 1988 to 1990. The Japanese proposals for the superconducting (SC) coil system were summarized by the Fusion Experimental Reactor (FER) Team and the Superconducting Magnet Laboratory of the Japan Atomic Energy Research Institute (JAERI). This report is one of the series reports of 'conceptual design of SC magnet system for ITER', and treats the AC losses of the superconducting coil. The AC loss means the heat production in the winding packs and the supporting structure due to magnetic field change. Since the AC losses occupy about 50% of the total heat loads during the normal operation, the estimation of AC loss is important. On the other hand, the estimation of the AC loss during the disruption is also required to consider the stability of the superconducting coil. From these reasons, AC losses in the TF and PF coil winding packs and the supporting structures were computed for the normal operation and for the disruption. In addition the AC losses due to the separatrix sweep were also estimated. In these computations not only the time dependencies of the AC loss power, but also the spatial power distributions were obtained. (author).

8358 (JAERI-M-91-123) **Conceptual design of SC magnet system for ITER, (4): Power supply and cryogenic system.** Kato, Takashi (Japan Atomic Energy Research Inst., Naka, Ibaraki (Japan). Naka Fusion Research Establishment); Yoshida, Kiyoshi; Hiue, Hisaaki; Ookawa, Yoshinao. Japan Atomic Energy Research Inst., Tokyo (Japan). Aug 1991. 69p. Order Number DE92750957. Source: OSTI; NTIS (US Sales Only); INIS.

The International Thermonuclear Experimental Reactor (ITER) is an experimental thermonuclear tokamak reactor that will test some new technologies of physics. The conceptual design activity of ITER required the joint work at a technical site at the Max Plank Institute for Plasma Physics in the Garching Germany from 1988 to 1990. The proposals from Japan are summarized by the Fusion Experimental Reactor (FER) Team and the Superconducting Magnet Laboratory of the Japan Atomic Energy Research Institute (JAERI). This paper describes the Japanese contributions to the utility (power supply and cryogenic system) for the magnet system of ITER. The concepts of a magnet utility design were based on the construction experiences of the domestic test facilities of the Large Coil Task and of the JAERI's Demo Poloidal Coil program. During the conceptual design phase, it is important to know what parts are critical for construction and what subjects need development. In the power supply system, the DC beakers shall be modified to compact size. Several cryogenic components also require scale-up development during the engineering design phase. (author).

8359 (JAERI-M-91-125) **Conceptual design of SC magnet system for ITER, (6): R and D proposals.** Yoshida, Kiyoshi (Japan Atomic Energy Research Inst., Naka, Ibaraki (Japan). Naka Fusion Research Establishment); Sugimoto, Makoto; Tsuji, Hiroshi. Japan Atomic Energy Research Inst., Tokyo (Japan). Aug 1991. 72p. Order Number DE92750958. Source: OSTI; NTIS (US Sales Only); INIS.

The International Thermonuclear Experimental Reactor (ITER) is an experimental thermonuclear tokamak reactor in order to test the basic physics performance and technologies. The conceptual design activity (CDA) of ITER required the joint work at a technical site at the Max Plank Institute for Plasma Physics in the Garching, Germany from 1988 to 1990. The technical proposals from Japan were summarized by the Fusion Experimental Reactor (FER) Team and the Superconducting Magnet Laboratory of the Japan Atomic Energy Research Institute (JAERI). This paper describes the Japanese contributions of the R and D proposals to the magnet system for the ITER. These proposals were discussed in ITER CDA design team and summarized in ITER Technical report No. 20. The development program of Toroidal Field Coil is basically proposed from Japan with the design and analysis reports. The Japanese proposals are almost adopted in the ITER Long-Term R and D program. (author).

8360 (JAERI-M-91-126) **Conceptual design of Fusion Experimental Reactor: Safety analysis and evaluation.** Seki, Yasushi (Japan Atomic Energy Research Inst., Naka, Ibaraki (Japan). Naka Fusion Research Establishment); Takatsu, Hideyuki; Iida, Hiromasa. Japan Atomic Energy Research Inst., Tokyo (Japan). Aug 1991. 522p. (In Japanese). Order Number DE92751036. Source: OSTI; NTIS (US Sales Only); INIS.

Safety analysis and evaluation have been made for the FER (Fusion Experimental Reactor) as well as for the ITER (International Thermonuclear Experimental Reactor) which are basically same in terms of safety. This report describes the results obtained in FY 1988 - 1990, in addition to a summary of the results obtained prior to 1988. The report shows the philosophy of the safety design, safety analysis and evaluation for each of the operation conditions, namely, normal operation, repair and maintenance, and accident. Considerations for safety regulations and standards are also added. (author).

8361 (JAERI-M-91-133) **Japanese contributions to blanket design for ITER.** Kuroda, Toshimasa (Japan Atomic Energy Research Inst., Naka, Ibaraki (Japan). Naka Fusion Research Establishment); Yoshida, Hiroshi; Takatsu, Hideyuki. Japan Atomic Energy Research Inst., Tokyo (Japan). Aug 1991. 199p. Order Number DE92751041. Source: OSTI; NTIS (US Sales Only); INIS.

ITER, the first integrated fusion nuclear experimental reactor, will be equipped with tritium breeding blanket to produce tritium required for the ITER operation, in which annual tritium consumption will reach 6 kg. All participants (Japan, the EC, the USA and the USSR) in the ITER CDA (Conceptual Design Activity) have conducted conceptual design of ITER blanket (cooling water temperature $\leq$ 100degC) utilizing their own technology bases. Because of superiority of currently available data base and technology, solid breeder blanket has been selected as the first option among many proposals including the solid breeder blankets, the liquid metal blankets and the aqueous lithium salt blankets. This report describes the results of the following design and analytical studies on the Japanese proposal of Li_2O pebble type blanket : 1) blanket structural concepts, 2) neutronics, 3) thermal-hydraulics, 4) mechanical characteristics, 5) tritium recovery process and tritium inventory, and 7) fabrication and assembly technology. (author).

8362 (JAERI-M-91-168) **Evolution of magnetic moment due to the cyclotron resonance with field ripples in a tokamak.** Tanaka, Masatoshi (Japan Atomic Energy Research Inst., Naka, Ibaraki (Japan). Naka Fusion Research Establishment). Japan Atomic Energy Research Inst., Tokyo (Japan). Oct 1991. 31p. (In Japanese). Order Number DE92751058. Source: OSTI; NTIS (US Sales Only); INIS.

Toroidal field ripples of tokamaks resonate under certain conditions with the cyclotron motion of charged particles streaming along the magnetic field lines. This resonance may yield the evolution of the magnetic moment, a good adiabatic invariant of the motion in magnetic fields. The equation of motion for the magnetic moment is discretized to a mapping which describes the evolution of the magnetic moment across the successive resonances. On the basis of the mapping, derived the linear stability of the motion in the phase space and the diffusion constant of the magnetic moment when the motion becomes stochastic. (author).

8363 (JAERI-M-91-180) **Development of automatic control method for cryopump system for JT-60 neutral beam injector.** Shibanuma, Kiyoshi (Japan Atomic Energy Research Inst., Naka, Ibaraki (Japan). Naka Fusion Research Establishment); Akino, Noboru; Dairaku, Masayuki; Ohuchi, Yutaka; Shibata, Takemasa.

Japan Atomic Energy Research Inst., Tokyo (Japan). Oct 1991. 47p. (In Japanese). Order Number DE92751040. Source: OSTI; NTIS (US Sales Only); INIS.

A cryopump system for JT-60 neutral beam injector (NBI) is composed of 14 cryopumps with the largest total pumping speed of 20000 m^3/s in the world, which are cooled by liquid helium through a long-distance liquid helium transferline of about 500 m from a helium refrigerator with the largest capacity of 3000 W at 3.6 K in Japan. An automatic control method of the cryopump system has been developed and tested. Features of the automatic control method are as follows. 1) Suppression control of the thermal imbalance in cooling-down of the 14 cryopumps. 2) Stable cooling control of the cryopump due to liquid helium supply to six cryopanels by natural circulation in steady-state mode. 3) Stable liquid helium supply control for the cryopumps from the liquid helium dewar in all operation modes of the cryopumps, considering the helium quantities held in respective components of the closed helium loop. 4) Stable control of the helium refrigerator for the fluctuation in thermal load from the cryopumps and the change of operation mode of the cryopumps. In the automatic operation of the cryopump system by the newly developed control method, the cryopump system including the refrigerator was stably operated for all operation modes of the cryopumps, so that the cool-down of 14 cryopumps was completed in 16 hours from the start of cool-down of the system and the cryopumps was stably cooled by natural circulation cooling in steady-state mode. (author).

8364 (LBL–30529) **Development of a dc low pressure D^- surface-conversion source using a 10-cm-diameter solid barium converter.** Kwan, J.W.; Anderson, O.A.; Chan, C.F.; Cooper, W.S.; deVries, G.J.; Kunkel, W.B.; Leung, K.N.; Lietzke, A.F.; Steele, W.F.; van Os, C.F.A.; Wells, R.P.; Williams, M.D. Lawrence Berkeley Lab., CA (United States). Sep 1991. 12p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-910943–4: 4. international conference on ion sources, Bensheim (Germany), 30 Sep - 4 oct 1991). Order Number DE92004686. Source: OSTI; NTIS; INIS; GPO Dep.

A D^- surface-conversion source using a solid barium converter is designed for steady-state operation to produce 200 mA of D^-. A similar ion source of twice the size as the one discussed here will meet the requirements set by the present US-ITER neutral beam injector design. Among the possible types of ion sources being considered for the US-ITER neutral beam design, the barium converter surface-conversion source is the only kind that does not use cesium in the discharge. This absence of cesium will minimize the number of accelerator breakdowns. 15 refs., 4 figs.

8365 (NIFS–101) **Conceptual design of D-^{3}He FRC reactor 'ARTEMIS'.** Momota, H. (and others); Ishida, A.; Kohzaki, Y. National Inst. for Fusion Science, Nagoya (Japan). Jul 1991. 45p. Order Number DE92750965. Source: OSTI; NTIS (US Sales Only); INIS.

A comprehensive design study of the D-^{3}He fueled field-reversed configuration (FRC) reactor 'ARTEMIS' is carried out for the purpose of proving its attractive characteristics and clarifying the critical issues for a commercial fusion reactor. The FRC burning plasma is stabilized and sustained in a steady equilibrium by means of a preferential trapping of D-^{3}He fusion-produced energetic protons. A novel direct energy converter for 15MeV protons is also presented. On the bases of a consistent scenario of the fusion plasma production and simple engineering, a compact and simple reactor concept is presented. The design of the D-^{3}He FRC power plant definitely offers the most attractive prospect for energy development. It is environmentally acceptable in view of radio-activity and fuel resources; and the estimated cost of electricity is low compared to a light water reactor. Critical issues concerning physics or engineering for the development of the D-^{3}He FRC reactor are clarified. (author).

8366 (NIFS-MEMO–2) **Development of three-dimensional compact magnetic dosimeter for environmental magnetic field monitoring.** Kubota, Yusuke; Obayashi, Haruo; Miyahara, Akira; Ohno, Kazuko; Nakamura, Kouichi; Horii, Kenzi. National Inst. for Fusion Science, Nagoya (Japan). Jul 1991. 48p. (In Japanese). Order Number DE92750825. Source: OSTI; NTIS (US Sales Only); INIS.

A computer-driven, three-dimensional magnetic fluxmeter to be used also for magnetic field dosimetry has been developed. A magnetic monitor applicable to this object should be measurable to an absolute value of local magnetic field strength and also be able to record its time integration as a measure of exposed dose to the magnetic field. The present fluxmeter consists of signal amplifiers, rectifiers, an A/D converter, and a pocket computer (PC). The signal outputs from the sensors are processed with the PC to compose an absolute strength of magnetic flux density and its time-integrated value. The whole system is driven by a battery and is quite compact in size to be used as a handy portable system. Further details of the design, idea, construction, specification, and testing result of the fluxmeter are described. The measurable range are from 0.4G to 20,000G in normal mode and 8mG to 400G in high-sensitivity AC mode, and the sensitivity is well independent of the magnetic field direction. These measured data are displayed in real time on the LCD panel of the PC and memorized in RAM files. Possible application of the fluxmeter are discussed with special attention to the search of the leakage and/or disturbing error fields around LHD (large Helical Device) and other magnetic systems, the individual dose control to the workers in strong magnetic fields, and the evaluation of the effects of long irradiation of magnetic fields. (author).

8367 **Plenum type crystal growth chamber.** Montgomery, K.E. To Dept. of Energy. 1990. Filed date 30 Oct 1989. USA Patent patent application 7-428,536. 8p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. Order Number DE92003831. Source: OSTI; NTIS; GPO Dep.

Crystals are grown in a tank which is divided by a baffle into a crystal growth region above the baffle and a plenum region below the baffle. A turbine blade or stirring wheel is positioned in a turbine tube which extends through the baffle to generate a flow of solution from the crystal growing region to the plenum region. The solution is pressurized as it flows into the plenum region. The pressurized solution flows back to the crystal growing region through return flow tubes extending through the baffle. Growing crystals are positioned near the ends of the return flow tubes to receive a direct flow of solution.

8368 (PNL-SA–19346) **The influence of helium on mechanical properties of model austenitic alloys determined using ^{59}Ni isotopic tailoring and fast reactor irradiation.** Hamilton, M.L.; Garner, F.A. Pacific Northwest Lab., Richland, WA (United States). Nov 1991. 14p. Sponsored by U.S. DOE Energy Research. DOE Contract AC06-76RL01830. (CONF-911111–15: International conference on fusion reactor materials, Clearwater, FL (United States), 17-22 Nov 1991). Order Number DE92004505. Source: OSTI; NTIS; INIS; GPO Dep.

Tensile testing on model Fe-Cr-Ni alloys removed from four discharges of the ^{59}Ni isotopic doping experiment in FFTF indicates that helium/dpa ratios typical of fusion reactors do not produce changes in the yield strength or elongation that are significantly different from those at much lower helium generation rates. It also appears that tensile properties approach a saturation level that is dependent only on the final irradiation temperature, but not prior temperature history or thermomechanical starting condition. 14 refs., 4 figs., 1 tab.

8369 (PNL-SA–19386) **Irradiation performance of oxide dispersion strengthened copper alloys to 150 dpa at 415°C.** Edwards, D.J. (Missouri Univ., Rolla, MO (United States)); Kumar, A.S.; Anderson, K.R.; Stubbins, J.F.; Garner, F.A.; Hamilton, M.L. Pacific Northwest Lab., Richland, WA (United States). Nov 1991. 17p. Sponsored by U.S. DOE Energy Research. DOE Contract AC06-76RL01830 ;FG06-89ER75522. (CONF-911111–17: International conference on fusion reactor materials, Clearwater, FL (United States), 17-22 Nov 1991). Order Number DE92004511. Source: OSTI; NTIS; INIS; GPO Dep.

Results have been obtained on the post-irradiation properties of various oxide dispersion strengthened copper alloys irradiated from 34 to 150 dpa at 415°C in the Fast Flux Test Facility. The GlidCop alloys strengthened by Al_2O_3 continue to outperform other alloys with respect to swelling resistance, and retention of both electrical conductivity and yield strength. Several castable ODS alloys and a

Cr_2O_3-strengthened alloy show increasingly poor resistance to radiation, especially in their swelling behavior. A HfO_2-strengthened alloy retains most of its strength and its electrical conductivity reaches a constant level after 50 dpa, but it exhibits a higher residual radioactivity.

8370 (PNL-SA-19387) **Response of solute and precipitation-strengthened copper alloys at high neutron exposure.** Garner, F.A. (Pacific Northwest Lab., Richland, WA (United States)); Hamilton, M.L.; Shikama, T.; Edwards, D.J.; Newkirk, J.W. Pacific Northwest Lab., Richland, WA (United States). Nov 1991. 23p. Sponsored by U.S. DOE Energy Research. DOE Contract AC06-76RL01830. (CONF-911111-14: International conference on fusion reactor materials, Clearwater, FL (United States), 17-22 Nov 1991). Order Number DE92004504. Source: OSTI; NTIS; INIS; GPO Dep.

A variety of solute and precipitation strengthened copper base alloys have been irradiated to neutron-induced displacement levels of 34 to 150 dpa at 415°C and 32 dpa at 529°C in the Fast Flux Test Facility to assess their potential for high heat flux applications in fusion reactors. Several MZC-type alloys appear to offer the most promise for further study. For low fluence applications CuBeNi and spinodally strengthened CuNiTi alloys may also be suitable. Although Cu-2Be resists swelling, it is not recommended for fusion reactor applications because of its low conductivity.

8371 (PNL-SA-19571) **Production bias: A proposed modification of the driving force for void swelling under cascade damage conditions.** Woo, C.H. (Atomic Energy of Canada Ltd., Pinawa, MB (Canada). Whiteshell Labs.); Singh, B.N.; Garner, F.A. Pacific Northwest Lab., Richland, WA (United States). Nov 1991. 19p. Sponsored by U.S. DOE Energy Research. DOE Contract AC06-76RL01830. (CONF-911111-16: International conference on fusion reactor materials, Clearwater, FL (United States), 17-22 Nov 1991). Order Number DE92004512. Source: OSTI; NTIS; INIS; GPO Dep.

A new concept of point-defect production as the main driving force for void swelling under cascade damage conditions is proposed. This concept takes into account the recombination and formation of immobile clusters and loops of vacancies and interstitials in the cascade region. The life times of the clusters and loops due to desolution are strong functions of the temperature, as well as their vacancy and interstitial nature. The resulting biased production of free point defects from the internal sources is shown to be a strong driving force for void swelling. The characteristics of void swelling due to production bias are described and compared with experimental results. We conclude that the production bias concept provides a good description of void swelling under cascade damage conditions.

8372 (PPPL-2788) **Facilities for technology testing of ITER divertor concepts, models, and prototypes in a plasma environment.** Cohen, S.A. Princeton Univ., NJ (United States). Plasma Physics Lab. Dec 1991. 111p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH03073. Order Number DE92005129. Source: OSTI; NTIS; INIS; GPO Dep.

The exhaust of power and fusion-reaction products from ITER plasma are critical physics and technology issues from performance, safety, and reliability perspectives. Because of inadequate pulse length, fluence, flux, scrape-off layer plasma temperature and density, and other parameters, the present generation of tokamaks, linear plasma devices, or energetic beam facilities are unable to perform adequate technology testing of divertor components, though they are essential contributors to many physics issues such as edge-plasma transport and disruption effects and control. This Technical Requirements Documents presents a description of the capabilities and parameters divertor test facilities should have to perform accelerated life testing on predominantly technological divertor issues such as basic divertor concepts, heat load limits, thermal fatigue, tritium inventory and erosion/redeposition. The cost effectiveness of such divertor technology testing is also discussed.

8373 (SAND-91-1163C) **Deposition of deuterium and metals on divertor tiles in the DIII-D tokamak.** Walsh, D.S. (Idaho State Univ., Pocatello, ID (United States)); Doyle, B.L.; Jackson, G.L. Sandia National Labs., Albuquerque, NM (United States). [1991]. 16p. Sponsored by U.S. DOE Energy Research. DOE Contract AC04-76DP00789. (CONF-911132-7: 38. national symposium of the American Vacuum Society, Seattle, WA (United States), 11-15 Nov 1991). Order Number DE92003648. Source: OSTI; NTIS; INIS; GPO Dep.

Hydrogen recycling and impurity influx are important issues in obtaining high confinement discharges in the D3-D tokamak. To reduce metallic impurities in D3-D, 40% of the wall area, including the highest heat flux zones, have been covered with graphite tiles. However erosion, redeposition and hydrogen retention in the tiles, as well as metal transport from the remaining Inconel walls can lead to enhanced recycling and impurity influx. Hydrogen and metal retention in divertor floor tiles have been measured using external ion beam analysis techniques following four campaigns where tiles were exposed to several thousand tokamak discharges. The areal density of deuterium retained following exposure to tokamak plasmas was measured with external nuclear reaction analysis. External proton-induced x-ray emission analysis was used to measure the areal densities of metallic impurities deposited upon the divertor tiles either by sputtering of metallic components during discharges or as contamination during tile fabrication. Measurements for both deuterium and metallic impurities were taken on both the tile surfaces which face the operating plasma and the surfaces on the side of the tiles which form the small gaps separating each of the tiles in the divertor. The highest areal densities of both deuterium and metals were found on the plasma-facing surface near the inner strike point region of each set of divertor tiles. Significant deposits, extending as fast a 1 cm from the plasma-facing and containing up to forty percent of the total divertor deposition, were also observed on the gap-forming surfaces of the tiles.

8374 (SAND-91-1700C) **Determination of deuterium gas pressure in plastic targets by Nuclear Magnetic Resonance.** Schneider, D.A.; Aubert, J.H.; Assink, R.A. Sandia National Labs., Albuquerque, NM (United States). [1991]. 8p. Sponsored by U.S. DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-9109319-2: 8. target fabrication specialists' meeting, Albuquerque, NM (United States), 23-26 Sep 1991). Order Number DE92004212. Source: OSTI; NTIS (US Sales Only); GPO Dep.

A recent target series on PBFAII included gas-filled spherical plastic shells. The 6mm diameter shells were prepared at LANL and had a multilayer structure consisting of 25 μm parylene-D, 5 μm poly(vinyl alcohol) (PVA), and 70 μm of parylene-N. The inner layer of parylene-D provided chlorine to allow diagnosis of the hydrodynamics of the imploding shell. The PVA layer provided a gas permeation barrier, and the thick outer layer of parylene-N provided sufficient stopping power for the PBFAII proton beam. The gas fill was originally 1100 torr of deuterium and 7.7 torr of hydrogen sulfide and was through a stainless steel/parylene stem with on one-use valve. Subsequent fills were made via permeation. In order to shoot the targets on PBFAII it was necessary to know the gas fill at shot time. The typical holding time in the PBFAII diode was two days. During this time the completed target would lose gas pressure via permeation. Therefore, to know the gas pressure at shot time required both knowledge of the pressure at target loading and good characterization of the permeation rate. Nuclear Magnetic Resonance (NMR) Spectroscopy was chosen to characterize the permeation of deuterium through the plastic shells.

8375 (UCLA-PPG-1380) **Plasma-materials interactions and edge-plasma physics research: Progress report, 1990-1991: PISCES Program.** Hirooka, Y. (ed.). California Univ., Los Angeles, CA (United States). Inst. of Plasma and Fusion Research. Dec 1991. 62p. Sponsored by U.S. DOE Energy Research. DOE Contract FG03-86ER52134. Order Number DE92006426. Source: OSTI; NTIS; INIS; GPO Dep.

This report discusses the: Pisces Program; Pisces Facilities; Pisces Experiments: Materials and Surface Physics; Pisces Experiments: Edge Plasma Physics; and, Theoretical Analysis: Edge Plasma Behavior.

8376 (UCRL-JC-106873) **EDS analysis of bromine in polymers.** Price, C.W.; Lindsey, E.F.; Letts, S.A. Lawrence Livermore National Lab., CA (United States). 14 Mar 1991. 4p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-910870-25: 49. Electron Microscopy Society of America

(EMSA) annual meeting, San Jose, CA (United States), 4-9 Aug 1991). Order Number DE92004160. Source: OSTI; NTIS; INIS; GPO Dep.

Design requirements for the Inertial Confinement Fusion program at LLNL frequently require polymers to be modified with known amounts of dopants without seriously degrading the surface finish. Techniques such as x-ray fluorescence permit reliable quantitative analyses of the dopants. However, our strong emphasis on surface finish requires frequent SEM examinations, and the need for rapid analyses instigated on evaluation of EDS to analyze bromine in the SEM. Brominated polymers based on polystyrene and a plasma-deposited hydrocarbon with a composition of approximately $CH_{1.2}$ were analyzed. The analyses were performed using an optional thin window in a NORAN Micro-Z 2 Si(Li) EDS mounted on a Hitachi S-800 FESEM. The specimens were coated with palladium. Since the standard ZAF programs are ineffective for hydrocarbon-based materials, calibration curves were established using Br L_α/C K_α peak ratios. A cryogenic vacuum system on the FESEM significantly reduced detrimental effects of carbon contamination on the sensitivity of the C K_α peak. Brominated polymers are susceptible to electron-beam damage, so the extent of damage and its effect on the EDS analysis also had to be determined. 3 figs.

8377 (ANL/CP-73778) **Universities and national laboratory roles in nuclear engineering.** Sackett, J.I. Argonne National Lab., Idaho Falls, ID (United States). [1991]. 4p. Sponsored by U.S. DOE Nuclear Energy. DOE Contract W-31109-ENG-38. (CONF-911107-35: Winter meeting of the American Nuclear Society (ANS), San Francisco, CA (United States), 10-15 Nov 1991). Order Number DE92001912. Source: OSTI; NTIS; INIS; GPO Dep.

Nuclear Engineering Education is being significantly challenged in the United States. The decline in enrollment generally and the reduction of the number of nuclear engineering departments has been well documented. These declines parallel a lack of new construction for nuclear power plants and a decline in research and development to support new plant design. Precisely at a time when innovation is is needed to deal with many issues facing nuclear power, the number of qualified people to do so is being reduced. It is important that the University and National Laboratory Communities cooperate to address these issues. The Universities must increasingly identify challenges facing nuclear power that demand innovative solutions and pursue them. To be drawn into the technology the best students must see a future, a need and identify challenges that they can meet. The University community can provide that vision with help from the National Laboratories. It has been a major goal within the reactor development program at Argonne National Laboratory to establish the kind of program that can help accomplish this.

8378 (BNL-46576) **A woman like you: Women scientists and engineers at Brookhaven National Laboratory: Careers in action.** Brookhaven National Lab., Upton, NY (United States). [1991]. 22p. Sponsored by U.S. DOE Office of Administration and Human Resource Management. DOE Contract AC02-76CH00016. Order Number DE92004996. Source: OSTI; NTIS; GPO Dep.

This publication by the women in Science and Engineering introduces career possibilities in science and engineering. It introduces what work and home life are like for women who have already entered these fields. Women at Brookhaven National Laboratory work in a variety of challenging research roles – from biologist and environmental scientist to safety engineer, from patent lawyer to technician. Brookhaven National Laboratory is a multi-program laboratory which carries out basic and applied research in the physical, biomedical and environmental sciences and in selected energy technologies. The Laboratory is managed by Associated University, Inc., under contract with the US Department of Energy. Brookhaven and the other national laboratories, because of their enormous research resources, can play a critical role in a education and training of the workforce.

8379 (DOE/ER-0249(91)) **Application and guide for the Special Research Grant Program 10 CFT Part 605.** USDOE Office of Energy Research, Washington, DC (United States). [1991]. 57p. Sponsored by U.S. DOE Energy Research. Source: OSTI (Free of Charge).

The Office of Energy Research (ER) established a Special Research Grant Program coded in 10 CFR Part 605 in April 1985. This regulation, in coordination with the US Department of Energy's (DOE) generic grant regulations, codified in 10 CFR Part 600, provides the administrative requirements to be used when supporting research, training and related activities in the scientific areas of interest to ER. This guide was developed to assist potential applicants and recipients of ER grants in understanding the required forms, formats, pre- and post-award administration requirements, and the award process utilized within ER program and DOE awarding offices for ER Special Research Grants. Individually published notices of availability or solicitations may change or amend information contained in this guide. Even though the purpose of this booklet is to inform eligible applicants of the special and generic financial assistance policies and procedures, it may be necessary to refer to both Parts 600 and 605 to obtain a comprehensive understanding of the full requirements for financial assistance support within ER.

8380 (LA-UR-91-3693) **Science, technology, environment, and competitiveness in a North American context.** Trocki, L.K. Los Alamos National Lab., NM (United States). [1991]. 14p. Sponsored by U.S. DOE Office of Environmental Restoration and Waste Management. DOE Contract W-7405-ENG-36. (CONF-9111147-1: Harmonizing economic competitiveness with environmental quality: a North American Challenge, Santa Fe, NM (United States), 8-9 Nov 1991). Order Number DE92003783. Source: OSTI; NTIS; INIS; GPO Dep.

Most economic activities pollute. Environmental regulations should serve the public good by providing incentives to reduce pollution caused by economic activity. Economic incentives include pollution taxes, subsidies for pollution abatement, and tradeable permits or allowances to pollute. Because of the political unacceptability of taxes and permits, much regulation imposes command and control measures and provides less incentive to minimize pollution. Efficient incentives would encourage pollution abatement up to the point where the cost of abatement equals the social and private benefit from the improvements in the environment. While these costs and benefits are difficult to measure, many analysts contend that the way environmental laws have been formulated and implemented in the US leads to very inefficient pollution control. This inefficiency can contribute to a decline in economic competitiveness in the long run, although economic studies do not support the "pollution haven" hypothesis. Better analysis (foresight) of the cost of transboundary pollution, significant in the Great Lakes region and along the US- Mexico border, as well as in rivers that flow between countries, is needed to formulate more effective policies and avoid sorry hindsight. Also, application of communal experience, technologies, and methods applied to shared problems can avoid costly duplication of searches for the optimal pollution abatement measures. 14 refs.

8381 (PNL-7713-HEDR) **Document search and declassification for Phase 1 of the HEDR Project.** Pacific Northwest Lab., Richland, WA (United States). May 1991. 8p. Sponsored by U.S. DOE Environment Safety & Health. DOE Contract AC06-76RL01830. Order Number DE92004564. Source: OSTI; NTIS; GPO Dep.

This letter report describes how Hanford Environmental Dose Reconstruction (HEDR) Project staff identified, searched for, evaluated, described, declassified, and made documents available during Phase 1 of the project. The objective of these activities was to find and make available HEDR-related information that was generated at the Hanford Site. Users of the information were HEDR staff, the Technical Steering Panel (TSP), and the public.

8382 (BNL-46856) **An organizational survey of the Los Alamos Site.** Shurberg, D.A.; Haber, S.B. Brookhaven National Lab., Upton, NY (United States). Nov 1991. 110p. Sponsored by U.S. DOE Energy Research. DOE Contract AC02-76CH00016. (CONF-9108150-3: 9. international conference on positron annihilation, Szombathely (Hungary), 26-31 Aug 1991). Order Number DE92005024. Source: OSTI; NTIS; GPO Dep.

An Organizational Survey (OS) was administered at the Los Alamos Site that queried employees on the subjects of organizational culture, various aspects of communications, employee commitment, work group cohesion, coordination of work, environmental, safety, and health concern, hazardous nature of work, safety and overall job satisfaction. The purpose of the OS is to measure in a quantitative and objective way the notion of "culture;" that is, the values, attitudes, and beliefs of the individuals working within the organization. In addition, through the OS, a broad sample of individuals can be reached that would probably not be interviewed or observed during the course of a typical assessment. The OS also provides a descriptive profile of the organization at one point in time that can then be compared to a profile taken at a different point in time to assess changes in the culture of the organization. While comparisons among groups are made, it is not the purpose of this report to make evaluative statements of which profile may be positive or negative. However, using the data presented in this report in conjunction with other evaluative activities, may provide useful insight into the organization. The OS administration at the Los Alamos Site was the ninth to occur at a Department of Energy (DOE) facility. All data from the OS is presented in group summaries, by organization, department or directorate within organization, supervisory level both overall and within organization, and staff classification within organization. Statistically significant differences between groups are identified and discussed. 9 refs., 94 figs., 11 tabs.

8383 (CONF-9111126-3) **The application of computer-based testing to allow testing out in retraining subjects.** Portwood, G.; Johnson, K.; Webster, C. Oak Ridge National Lab., TN (United States). [1991]. 8p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From 15. annual TRADE (training resources and data exchange) conference; St. Petersburg, FL (United States); 18-20 Nov 1991. Order Number DE92003561. Source: OSTI; NTIS; GPO Dep.

ORNL's computer-generated test our program, developed using computer-based training (CBT) technology, allows employees the option of "testing out" instead of attending the General Employee Retraining (GER) class. The program contains a "bank" of questions; 20 different questions randomly selected by the computer for each exam. The exam is administered by computer; minimum input is required of the individual taking the exam. The training organization inputs the bank of exam questions, the type of questions to be used, and categorizes questions according to subject, such as Quality Assurance, Hazard Communication, Radiation Safety, and so forth. The exam is graded by the computer and a hard-copy record may be generated. Exam results may be stored on a floppy disk. Compliance training, as required by the US Department of Energy (DOE) in many areas, has become an activity which requires individuals to spend more and more of their time in training. Compliance training could be defined as, "training that is required for individuals who perform certain activities." In other words, it is training that is not optional. Compliance training exists for subjects that are general in nature such as General Employee Training (GET), and for subjects of a more technical nature such as Rad Worker, SARA/OSHA, and so forth. The computer-generated program, developed by ORNL using computer-based training technology, meets the criteria for compliance training, but "training time" or "man training hours" in the pilot program was reduced from two hours per person to about 20 minutes per person. Overall training time for the pilot program was reduced by almost sixty percent.

8384 (DOE/EH-0206) **Organizational Cultural Assessment of the Idaho National Engineering Laboratory.** USDOE, Washington, DC (United States). Jun 1991. 198p. Sponsored by U.S. DOE Environment Safety & Health. Order Number DE92003032. Source: OSTI; NTIS; GPO Dep.

An Organizational Cultural Assessment (OCA) was performed at the Idaho National Engineering Laboratory (INEL) by administering an Organizational Culture Survey (OCS) that queried employees on the subjects of organizational culture, various aspects of communications, employee commitment, work group cohesion, coordination of work, environmental concerns, hazardous nature of work, safety and overall job satisfaction. Many of these subjects are assessed in the OCS through highly developed and validated scales that have been administered in many different types of organizations. The purpose of the OCS is to measure in a quantitative and objective way the notion of "culture;" that is, the values, attitudes, and beliefs of the individuals working within the organization. In addition, through the OCS, a broad sample of individuals can be reached that would probably not be interviewed or observed during the course of a typical assessment. The OCS also provides a descriptive profile of the organization at one point in time that can then be compared to a profile taken at a different point in time to assess changes in the culture of the organization. The OCS administration at the INEL was the sixth to occur at a Department of Energy (DOE) facility. The INEL Organization is somewhat different from other DOE facilities are which the OCS was administered, due to the presence of six different major operating contractors. The seven organizations assessed at the INEL are: (1) Argonne National Laboratory – West; (2) DOE Fire Department/Radiological and Environmental Sciences Laboratory; (3) EG&G Idaho Incorporated; (4) MK Ferguson; (5) Protection Technology Incorporated; (6) Rockwell; and (7) Westinghouse Idaho Nuclear Company Incorporated. All data from the OCS is presented in group summaries by organization, Supervisory Level, Staff Classification, and department within organization. Statistically significant differences between groups are identified and discussed.

8385 (DOE/NV/10845-12) **Information management plan for the Nevada Test Site Groundwater Characterization Project.** Thompson, C.B.; Russell, C.E. Nevada Univ., Las Vegas, NV (United States). Water Resources Center. Dec 1991. 6p. Sponsored by U.S. DOE Defense Programs. DOE Contract AC08-90NV10845. Order Number DE92004123. Source: OSTI; NTIS; GPO Dep. Publication No. 45092.

Information management plays a significant role in the Groundwater Characterization Project (GCP) because of its size and complexity. Information management shares complementary roles with research objectives and quality assurance (QA) to define how the project will be implemented. Information management serves as a backbone to the research effort by tying various project components together, from data collection through data analysis to the use of the information by researchers and program managers. The information collected and analyzed from the Groundwater Characterization Project must be available to its users in a timely, cost-effective, and accurate manner. The quality and validity of these data are important to the overall Nevada Test Site program. The activities in this plan include: field activities; sample collection; processing, and tracking; data base design and management; retrieval, analysis, and dissemination of the data; and, archiving and cataloging of the data and documentation. The implementation of information management with respect to these activities is defined in this plan as strategies supplemented by Standard Operating Procedures (SOPs) to provide the details of each activity. The Quality Assurance Plan (QAP) seeks to assure that the information collected is of the highest possible quality permitted under current technology and science and is error-free.

8386 (IAEA-TSRA-1) **Transport safety research abstracts. No. 1: Information on research recently concluded and in progress.** International Atomic Energy Agency, Vienna (Austria). Jul 1991. 91p. Order Number DE92614117. Source: OSTI; NTIS (US Sales Only); INIS.

The Transport Safety Research Abstracts is a collection of reports from Member States of the International Atomic Energy Agency, and other international organizations on research in progress or just completed in the area of safe transport of radioactive material. The main aim of TSRA is to draw attention to work that is about to be published, thus enabling interested parties to obtain further information through direct correspondence with the investigators. Information contained in this issue covers work being undertaken in 6 Member States and contracted by 1 international organization; it is hoped with succeeding issues that TSRA will be able to widen this base. TSRA is modelled after other IAEA publications describing work in progress in other programme areas, namely Health Physics Research Abstracts (No. 14 was published in 1989), Waste Management Research Abstracts (No. 20 was published in 1990), and Nuclear Safety Research Abstracts (No. 2 was published in 1990).

8387 (IPEN-PUB–337) **Quality manual for Laboratories of the Nuclear Materials Characterization Division.** Sabato, S.F. Instituto de Pesquisas Energeticas e Nucleares (IPEN), Sao Paulo, SP (Brazil). May 1991. 63p. (In Portuguese). Order Number DE92614118. Source: OSTI; NTIS (US Sales Only); INIS.

This publication presents the first Quality Manual for the Laboratories at the Nuclear Materials Characterization Division. The Manual describes the laboratories, its organization structure, fields of activities, personnel records, equipments, maintenance and calibration. The main aspects concerning quality assurance in the analysis were discussed. The whole system of receiving, identifying and processing analysis of the samples is shown. Since there are many information to be contained in several subjects of the Quality Manual, there were produced separate documents that are cross referenced in the manual. (author).

8388 (KAERI/RR–957/90) **Quality assurance for the research and development of nuclear technology.** Yang, Myung Seung (Korea Atomic Energy Research Inst., Daeduk (Korea, Republic of)); Kim, Young Sea; Lim, Nam Jin. Korea Atomic Energy Research Inst., Daeduk (Korea, Republic of). Jan 1991. 235p. (In Korean). Order Number DE92615201. Source: OSTI; NTIS (US Sales Only); INIS.

KAERI is carrying out several large nuclear R and D projects to achieve the indigenization of nuclear technology in Korea. In order to accomplish nuclear projects effectively, the KAERI-wide quality assurance system as well as project quality systems has been prepared for the coordination and effective implementation of various quality activities. The revision of KAERI QA Program Plan will help to establish and upgrade the effective and efficient KAERI-wide QA system. Technical support activities to the project QA program were performed in more systematic way. KAERI QA Committee was organized, and the meeting was held periodically to discuss and find out the optimum solution for the critical quality problems. Quality evaluation including internal audits was carried out to analyze the QA activities in the various projects and evlauation results was condensed to quality trend analysis. QA record preserving facility was built and was being used to maintain the QA records. The basic studies on the computer S/W QA, QA in R and D, quality costs analysis were also performed to upgrade the safety and reliability. (Author).

8389 (KURRI-TR–353) **Summary reports of activities under visiting research program, second half of 1990.** Kyoto Univ , Kumatori, Osaka (Japan). Research Reactor Inst. Jul 1991. 101p. (In Japanese). Order Number DE92751062. Source: OSTI; NTIS (US Sales Only); INIS.

The Technical Report of the Research Reactor Institute, Kyoto University, is published as occasion demands, summarizing as prompt reports the date required for research and experiment, such as the results of the functional test on various experimental facilities, the results of the test on the things manufactured for trial, the state of radiation control and waste treatment, the reports of study meetings and so on, or the remarkable results and new methods obtained on the way of research, and the discussion on other papers and reports. In this report, 78 visiting research projects using the KUR and 10 visiting research projects using the KUCA in the second half of 1990 are summarized. Also 2 projects in the first half of 1990 are added. The adoption No., the kind of project, title, the names of researchers and their posts, and the gist of research are reported in each project. (K.I.).

8390 (NEI-SE–68) **The electric power system in the year 2050.** Gerholm, T.R. Swedish State Power Board, Vaellingby (Sweden). Mar 1991. 40p. (In Swedish). Order Number DE92614119. Source: OSTI; NTIS (US Sales Only); INIS.

The need of electric energy in Sweden the year 2050 as well as the generation and transmission of electric power are discussed in this report. (K.A.E.).

8391 (WHC-SA–1403) **A trainer's role in effecting a cultural change.** Hopkins, G.P. Westinghouse Hanford Co., Richland, WA (United States). Nov 1991. 10p. Sponsored by U.S. DOE Office of Administration and Human Resource Management. DOE Contract AC06-87RL10930. (CONF-9111126–1: 15. annual TRADE (training resources and data exchange) conference, St. Petersburg, FL (United States), 18-20 Nov 1991). Order Number DE92003632. Source: OSTI; NTIS; GPO Dep.

Teaching is a process used to bring about a change in a person or target group for the benefit of that individual, society, or the organization. The trainer's role in effecting a cultural change is not as a teacher of cultural behaviors but as a facilitator of cultural change. This paper will concentrate primarily on the analysis, solicitation of management support, and implementation phases of effecting a cultural change among a target group from the trainer's side of the process. The three major aspects of a cultural change program also will be discussed. They are: (1) gathering data, (2) soliciting management support, and (3) the implementation phase. Analysis tools such as direct observation measurement, informal and formal surveys will be discussed, and the uses of each will be demonstrated. The data gathered in the analysis phase will be used to identify cultural deficiencies in the group and to solicit management support for a cultural change. The design and development phases will be bypassed, and several methods of accomplishing the implementation phase will be highlighted.

8392 (ANL/CP–74794) **Rationale for guaranteed ODE defect control.** Corless, R.M. (University of Western Ontario, London, ON (Canada). Dept. of Applied Mathematics); Corliss, G.F. Argonne National Lab., IL (United States). [1991]. 11p. Sponsored by U.S. DOE Energy Research; National Science Foundation. DOE Contract W-31109-ENG-38. Grant CCR-8802429. (CONF-9110300–2: SCAN '91: international symposium on computer arithmetic and scientific computing, Oldenburg (Germany), 1-4 Oct 1991). Order Number DE92004721. Source: OSTI; NTIS; GPO Dep.

We introduce a modification of existing algorithms that allows easier analysis of numerical solutions of ordinary differential equations. We relax the requirement that the specified problem solved, and instead solve a "nearby" problem exactly, in Wilkinson's tradition of backward error analysis. The precise meaning of "nearby" is left to the user. This inexpensive algorithm sublimates the well-known difficulties associated with the propagation of accumulated error and avoids the difficulty of exponential growth of inclusion widths associated with internal techniques. No claim is made for the accuracy with which the specified problem is solved. It is shown that often no such claim is necessary. 14 refs., 4 figs.

8393 (ANL/CP–74795) **On implicit Taylor series methods for stiff ODEs.** Kirlinger, G. (Technische Univ., Vienna (Austria). Inst. fuer Angewandte und Numerische Mathematik); Corliss, G.F. Argonne National Lab., IL (United States). [1991]. 10p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. (CONF-9110300–1: SCAN '91: international symposium on computer arithmetic and scientific computing, Oldenburg (Germany), 1-4 Oct 1991). Order Number DE92004720. Source: OSTI; NTIS; GPO Dep.

Several versions of implicit Taylor series methods (ITSM) are presented and evaluated. Criteria for the approximate solution of ODEs via ITSM are given. Some ideas, motivations, and remarks on the inclusion of the solution of stiff ODEs are outlined. 25 refs., 3 figs.

8394 (ANL/TM–489) **A plan for administrative computing at ANL: FY1992–FY1994.** Caruthers, M.S. (ed.); O'Brien, D.E.; Bretscher, M.E.; Hischier, R.C.; Moore, N.J.; Slade, R.G. Argonne National Lab., IL (United States). Nov 1991. 146p. Sponsored by U.S. DOE Energy Research. DOE Contract W-31109-ENG-38. Order Number DE92005358. Source: OSTI; NTIS; GPO Dep.

This report discusses the data processing future of ANL. Chapter 1, "Introduction," assesses the state of administrative computing at ANL and the implications of FY1992 funding recommendations. It includes a history of Management Information System (MIS) planning for administrative data processing. Chapter 2, "Administrative Computing Goals and Strategy," discusses the strategy and goals which are an important part of administrative data processing plans for the Laboratory. Chapter 3, "Management Guidelines for Administrative Computing," describes the management guidelines established by ADPO for the proposal and implementation of administrative computing systems. The guidelines are a valuable tool for management in determining what applications would be appropriate to their needs and in formulating the proposals for those applications. Chapter 4, "Proposed Projects," summarizes the proposals for new or enhanced administrative computing systems presented to ADPO by individual divisions or departments with the assistance of Management Information Systems. The summaries indicate some of the possibilities for the development of administrative computing systems at ANL. The areas of the various proposals are diverse, but they share a common concern with the integration and unification of existing systems into a more efficient and productive whole. Chapter 5, "Implementation of Proposed Plan," describes training and personnel resources used in developing and implementing proposed systems. Synopses of the administrative computing systems developed and maintained by the divisions and departments of Argonne National Laboratory appear in Appendix F, "Systems Synopses".

8395 (DOE/ER/25018–4) **Numerical solution of nonlinear algebraic equations in stiff ODE solving (1986–89)—Quasi-Newton updating for large scale nonlinear systems (1989–90): Final report, 1986–1990.** Walker, H.F. Utah State Univ., Logan, UT (United States). Dept. of Mathematics and Statistics. [1990]. 7p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-86ER25018. Order Number DE92004839. Source: OSTI; NTIS; GPO Dep.

During the 1986–1989 project period, two major areas of research developed into which most of the work fell: "matrix-free" methods for solving linear systems, by which we mean iterative methods that require only the action of the coefficient matrix on vectors and not the coefficient matrix itself, and Newton-like methods for underdetermined nonlinear systems. In the 1990 project period of the renewal grant, a third major area of research developed: inexact Newton and Newton iterative methods and their applications to large-scale nonlinear systems, especially those arising in discretized problems. An inexact Newton method is any method in which each step reduces the norm of the local linear model of the function of interest. A Newton iterative method is any implementation of Newton's method in which the linear systems that characterize Newton steps (the "Newton equations") are solved only approximately using an iterative linear solver. Newton iterative methods are properly considered special cases of inexact Newton methods. We describe the work in these areas and in other areas in this paper.

8396 (DOE/ER/25041–3) **Computer aided surface representation: Progress report, June 1, 1989–May 31, 1990.** Barnhill, R.E. Arizona State Univ., Tempe, AZ (United States). Dept. of Computer Science. 19 Feb 1990. 64p. Sponsored by U.S. DOE Energy Research. DOE Contract FG02-87ER25041. Order Number DE92005418. Source: OSTI; NTIS; GPO Dep.

The central research problem of this project is the effective representation, computation, and display of surfaces interpolating to information in three or more dimensions. If the given information is located on another surface, then the problem is to construct a "surface defined on a surface". Sometimes properties of an already defined surface are desired, which is "geometry processing". Visualization of multivariate surfaces is possible by means of contouring higher dimensional surfaces. These problems and more are discussed below. The broad sweep from constructive mathematics through computational algorithms to computer graphics illustrations is utilized in this research. The breadth and depth of this research activity makes this research project unique.

8397 (IKE–4-133) **THEXSYST - a knowledge based system for the control and analysis of technical simulation calculations.** Burger, B. Stuttgart Univ. (Germany). Inst. fuer Kernenergetik und Energiesysteme. Jul 1991. 190p. (In German). Order Number DE92750140. Source: OSTI; NTIS (US Sales Only); INIS.

This system (THEXSYST) will be used for control, analysis and presentation of thermal hydraulic simulation calculations of light water reactors. THEXSYST is a modular system consisting of an expert shell with user interface, a data base, and a simulation program and uses techniques available in RSYST. A knowledge base, which was created to control the simulational calculation of pressurized water reactors, includes both the steady state calculation and the transient calculation in the domain of the depressurization, as a result of a small break loss of coolant accident. The methods developed are tested using a simulational calculation with RELAP5/Mod2. It will be seen that the application of knowledge base techniques may be a helpful tool to support existing solutions especially in graphical analysis. (orig./HP).

8398 (INDC(CCP)–343/L) **Method for evaluating non-consistent data using two statistical criteria.** Yaborov, Yu.F. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Nov 1991. 10p. Translation of a paper published in Yadernye Konstanty (Nuclear Constants 2, 1989) - Original report in Russian was distributed as INDC(CCP)-303/G. Translated by the IAEA. Order Number DE92615195. Source: OSTI; NTIS (US Sales Only); INIS.

The paper presents methods of identifying mismatched data and finding possible causes of their being mismatched by using a statistical criterion which highlights abnormal extreme values. Processing methods for systems of non-consistent data are suggested. 17 refs.

8399 (INIS-BR–2864) **Solution of parabolic differential equations by Laplace transformation with numerical inversion.** Peruzzo, E.M. Rio Grande do Sul Univ., Porto Alegre, RS (Brazil). Dept. de Engenharia Nuclear. 1984 22p. (In Portuguese). Order Number DE92614100. Source: OSTI; NTIS (US Sales Only); INIS.

The objective of this work is to present and to apply a method for solving parabolic differential equations using the Laplace transform with the numerical calculation of the inverse transform, which was proposed by Heydarian. This method was applied for solving problems in nuclear engineering and heat transfer which have known analytical solutions, it was verified results with errors less than 1%. (author).

8400 (INIS-BR–2876) **Probe code: a set of programs for processing and analysis of the left ventricular function - User's manual.** Piva, R.M.V. (Sao Paulo Univ., SP (Brazil). Inst. de Fisica). Sao Paulo Univ., SP (Brazil). Inst. de Fisica. 1987 64p. (In Portuguese). Order Number DE92614104. Source: OSTI; NTIS (US Sales Only); INIS.

The User's Manual of the Probe Code is an addendum to the M.Sc. thesis entitled A Microcomputer System of Nuclear Probe to Check the Left Ventricular Function. The Probe Code is a software which was developed for processing and off-line analysis curves from the Left Ventricular Function, that were obtained in vivo. These curves are produced by means of an external scintigraph probe, which was collimated and put on the left ventricule, after a venous inoculation of Tc-99 m. (author).

8401 (INIS-BR–2881) **An iterative computer graphics system to simulate the three dimension tumor growth.** Conci, A. (Pontificia Univ. Catolica do Rio de Janeiro, RJ (Brazil)); Pedreira, C.E.; Wanderley, R.V.C.T. Sociedade Brasileira de Matematica Aplicada e Computacional, Rio de Janeiro, RJ (Brazil). 1989 2p.

8403 (INS-T–503) **The 7-th INS Scientific Computational Programs.** Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. Jul 1991. 83p. (In Japanese). Order Number DE92750967. Source: OSTI; NTIS (US Sales Only); INIS.

Nineteen groups were accepted as the 7-th INS Scientific Computational Programs (ISCP). This ISCP can use full resources of the INS central computer without an operational limitation. The 7-th ISCP started at June/11/91 and ended at March/30/91. Some results were already published in journals or appeared in physical meetings. This is a sum of the used statistics of the 7-th ISCP and reports presented by groups performed the 7-th ISCP. (author).

8404 (IS-T–1589) **The work/exchange model: A generalized approach to dynamic load balancing.** Wikstrom, M.C. Ames Lab., IA (United States). 20 Dec 1991. 173p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-82. Order Number DE92005156. Source: OSTI; NTIS; GPO Dep.

A crucial concern in software development is reducing program execution time. Parallel processing is often used to meet this goal. However, parallel processing efforts can lead to many pitfalls and problems. One such problem is to distribute the workload among processors in such a way that minimum execution time is obtained. The common approach is to use a load balancer to distribute equal or nearly equal quantities of workload on each processor. Unfortunately, this approach relies on a naive definition of load imbalance and often fails to achieve the desired goal. A more sophisticated definition should account for the affects of additional factors including communication delay costs, network contention, and architectural issues. Consideration of additional factors led us to the realization that optical load distribution does not always result from equal load distribution. In this dissertation, we tackle the difficult problem of defining load imbalance. This is accomplished through the development of a parallel program model called the Generalized Work/Exchange Model. Associated with the model are equations for a restricted set of deterministically balanced programs that characterize idle time, elapsed time, and potential speedup. With the aid of the model, several common myths about load imbalance are exposed. A useful application called a load balancer enhancer is also presented which is applicable to the more general, quasi-static load unbalanced program.

8405 (KAERI/RR–934/90) **A study on the nuclear computer codes installation and management system.** Kim, Yeon Seung (Korea Atomic Energy Research Inst., Daeduk (Korea, Republic of)); Huh, Young Hwan; Kim, Hee Kyung; Kang, Byung Heon; Kim, Ko Ryeo; Suh, Soong Hyok; Choi, Young Gil; Lee, Jong Bok. Korea Atomic Energy Research Inst., Daeduk (Korea, Republic of). Dec 1990. 103p. (In Korean). Order Number DE92615196. Source: OSTI; NTIS (US Sales Only); INIS.

From 1987 a number of technical transfer related to nuclear power plant had been performed from C-E for YGN 3 and 4 construction. Among them, installation and management of the computer codes for YGN 3 and 4 fuel and nuclear steam supply system was one of the most important project. Main objectives of this project are to establish the nuclear computer code management system, to develop QA procedure for nuclear codes, to secure the nuclear code reliability and to extend techanical applicabilities including the user-oriented utility programs for nuclear codes. Contents of performing the project in this year was to produce 215 transmittal packages of nuclear codes installation including making backup magnetic tape and microfiche for software quality assurance. Lastly, for easy reference about the nuclear codes information we presented list of code names and information on the codes which were introduced from C-E. (Author).

8406 (KAERI/RR–935/90) **A study on the nuclear computer code maintenance and management system.** Kim, Yeon Seung (Korea Atomic Energy Research Inst., Daeduk (Korea, Republic of)); Huh, Young Hwan; Lee, Jong Bok; Choi, Young Gil; Suh, Soong Hyok; Kang, Byong Heon; Kim, Hee Kyung; Kim, Ko Ryeo; Park, Soo Jin. Korea Atomic Energy Research Inst., Daeduk (Korea, Republic of). Dec 1990. 206p. (In Korean). Order Number DE92615197. Source: OSTI; NTIS (US Sales Only); INIS.

According to current software development and quality assurance trends. It is necessary to develop computer code management system for nuclear programs. For this reason, the project started in 1987. Main objectives of the project are to establish a nuclear computer code management system, to secure software reliability, and to develop nuclear computer code packages. Contents of performing the project in this year were to operate and maintain computer code information system of KAERI computer codes, to develop application tool, AUTO-i, for solving the 1st and 2nd moments of inertia on polygon or circle, and to research nuclear computer code conversion between different machines. For better supporting the nuclear code availability and reliability, assistance from users who are using codes is required. Lastly, for easy reference about the codes information, we presented list of code names and information on the codes which were introduced or developed during this year. (Author).

8407 (KEK–91-3) **User's guide to DENKAI.** Shintake, Tsumoru. National Lab. for High Energy Physics, Tsukuba, Ibaraki (Japan). Jun 1991. 26p. Order Number DE92751022. Source: OSTI; NTIS (US Sales Only); INIS.

DENKAI is a set of computer program to calculate the 2-dimensional electrostatic field with cylindrical symmetry. Using simple commands, triangle meshes are automatically generated in MESH GENERATOR routine. The bandwidth of the coefficient matrix is reduced in the BAND WIDTH routine. The Laplace equation of the electrostatic field is solved in FIELD routine by inverting the coefficient matrix using Gauss method. The electric field lines are plotted by the FIELD PLOT routine, and the electric field intensities on arbitrary boundary can be read out by the FIELD LIST routine. (author).

8408 (MLM–3722) **Three-dimensional operational interpolation.** Silver, G.L. Mound, Miamisburg, OH (United States). 12 Dec 1991. 53p. Sponsored by U.S. DOE Defense Programs. DOE Contract AC04-88DP43495. Order Number DE92004581. Source: OSTI; NTIS; GPO Dep.

The operational method for interpolating experimental data is extended into three dimensions. An exponential method or a polynomial method can be used. Equations for two pyramids and two prisms are derived as illustrations. 18 refs.

8409 (ORNL/ER–65) **Monitoring and modeling contaminated sediment transport in the White Oak Creek watershed: Environmental Restoration Program.** Fontaine, T.A. Oak Ridge National Lab., TN (United States). Nov 1991. 19p. Sponsored by U.S. DOE Office of Environmental Restoration and Waste Management. DOE Contract AC05-84OR21400. Order Number DE92004585. Source: OSTI; NTIS; GPO Dep.

Environmental Sciences Publication No. 3787.

Over the past 47 years, operations and waste disposal activities at Oak Ridge National Laboratory have resulted in the contamination of the White Oak Creek drainage system. The containments presenting the highest risk to human health and the environment are particle reactive and are associated with the soils and sediments in White Oak Creek. During floods, the erosion of these sediments results in the transport of contaminants out of the catchment into the Clinch River. A long-term strategy is required to monitor the movement of contaminated sediments and to predict the transport of these sediments that could occur during major floods. A monitoring program will provide the information required to (1) evaluate the existing off-site transport of contaminated sediments, (2) evaluate the need for short-term control measures, (3) set priorities for remediation of contaminated areas in White Oak Creek (4) verify the success of completed remedial actions intended to control the movement of contaminated sediments, and (5) develop a computer model to simulate the transport of contaminated sediments in White Oak Creek. A contaminant-transport model will be developed to (1) evaluate the potential for the off-site transport of contaminated sediments during major floods, (2) develop long term control measures and remediation solutions, (3) predict the impact of future land-use changes in White Oak Creek on the transport of contaminated sediment. This report contains a plan for the monitoring and modeling activities required to accomplish these objectives.

8410 (ORNL/TM–11797) **Survey of data compression techniques.** Gryder, R.; Hake, K. Oak Ridge National Lab., TN (United States). Sep 1991. 46p. Sponsored by U.S. Department of Defense. DOE Contract AC05-84OR21400. Order Number DE92004292. Source: OSTI; NTIS; GPO Dep.

PM-AIM must provide to customers in a timely fashion information about Army acquisitions. This paper discusses ways that PM-AIM can reduce the volume of data that must be transmitted between sites. Although this paper primarily discusses techniques of data compression, it also briefly discusses other options for meeting the PM-AIM requirements. The options available to PM-AIM, in addition to hardware and software data compression, include less-frequent updates, distribution of partial updates, distributed data base design, and intelligent network design. Any option that enhances the performance of the PM-AIM network is worthy of consideration. The recommendations of this paper apply to the PM-AIM project in three phases: the current phase, the target phase, and the objective phase. Each recommendation will be identified as (1) appropriate for the current phase, (2) considered for implementation during the target phase, or (3) a feature that should be part of the objective phase of PM-AIM's design. The current phase includes only those measures that can be taken with the installed leased lines. The target phase includes those measures that can be taken in transferring the traffic from the leased lines to the DSNET environment with minimal changes in the current design. The objective phase includes all the things that should be done as a matter of course. The objective phase for PM-AIM appears to be a distributed data base with data for each site stored locally and all sites having access to all data.

8411 (ORNL/TM–11899) **Discrete Pearson distributions.** Bowman, K.O. (Oak Ridge National Lab., TN (United States)); Shenton, L.R.; Kastenbaum, M.A. Oak Ridge National Lab., TN (United States). Nov 1991. 26p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE92004700. Source: OSTI; NTIS; GPO Dep.

These distributions are generated by a first order recursive scheme which equates the ratio of successive probabilities to the ratio of two corresponding quadratics. The use of a linearized form of this model will produce equations in the unknowns matched by an appropriate set of moments (assumed to exist). Given the moments we may find valid solutions. These are two cases; (1) distributions defined on the non-negative integers (finite or infinite) and (2) distributions defined on negative integers as well. For (1), given the first four moments, it is possible to set this up as equations of finite or infinite degree in the probability of a zero occurrence, the sth component being a product of s ratios of linear forms in this probability in general. For (2) the equation for the zero probability is purely linear but may involve slowly converging series; here a particular case is the discrete normal. Regions of validity are being studied. 11 refs.

8412 (ORNL/TM–11903) **A case against a divide and conquer approach to the nonsymmetric eigenvalue problem.** Jessup, E.R. Oak Ridge National Lab., TN (United States). Dec 1991. 28p. Sponsored by U.S. DOE Energy Research; National Science Foundation. DOE Contract AC05-84OR21400. Grant CCR-9109785. Order Number DE92004086. Source: OSTI; NTIS; GPO Dep.

Divide and conquer techniques based on rank-one updating have proven fast, accurate, and efficient in parallel for the real symmetric tridiagonal and unitary eigenvalue problems and for the bidiagonal singular value problem. Although the divide and conquer mechanism can also be adapted to the real nonsymmetric eigenproblem in a straightforward way, most of the desirable characteristics of the other algorithms are lost. In this paper, we examine the problems of accuracy and efficiency that can stand in the way of a nonsymmetric divide and conquer eigensolver based on low-rank updating. 31 refs., 2 figs.

8413 (ORNL/TM–11934) **Information survey for microcomputer systems integration.** Hake, K.A. Oak Ridge National Lab., TN (United States). Dec 1991. 21p. Sponsored by U.S. Department of Defense. DOE Contract AC05-84OR21400. Order Number DE92004021. Source: OSTI; NTIS; GPO Dep.

One goal of the PM-AIM is to provide US Army Project Managers (PMs) and Project Executive Officers (PEOs) with a fundamental microcomputing resource to help perform acquisition information management and its concomitant reporting requirements. Providing key application software represents one means of accomplishing this goal. This workstation would furnish a broad range of capabilities needed in the PM and PEO office settings as well as software tools for specific project management and acquisition information. Although still in the conceptual phase, the practical result of this exercise in systems integration will likely be a system called the Project Manager's Information System (PMIS) or the AIM workstation. It would include such software as, Project Manager's System Software (PMSS), Defense Acquisition Executive Summary (DAES), and Consolidated Acquisition Reporting System (CARS) and would conform to open systems architecture as accepted by the Department of Defense. ORNL has assisted PM-AIM in the development of technology ideas for the PMIS workstation concept. This paper represents the compilation of information gained during this process. This information is presented as a body of knowledge (or knowledge domain) defining the complex technology of microcomputing. The concept of systems integration or tying together all hardware and software components reflects the nature of PM-AIM's task in attempting to field a PMIS or AIM workstation.

8414 (ORNL/TM–11951) **GRESS Version 2.0 user's manual.** Horwedel, J.E. Oak Ridge National Lab., TN (United States). Nov 1991. 106p. Sponsored by U.S. DOE Defense Programs. DOE Contract AC05-84OR21400. Order Number DE92004592. Source: OSTI; NTIS; GPO Dep.

GRESS uses a precompiler to interpret FORTRAN statements and determine the mathematical operations embodied in them. As each arithmetic assignment statement in a program is interpreted, information necessary to allow the calculation of derivatives is generated. The result of the precompilation step is a new FORTRAN program that can produce derivatives for any REAL (i.e., single or double precision) variable calculated by the model. Consequently, GRESS enhances FORTRAN programs or subprograms by adding the calculation of derivatives along with the original output. Derivatives from a GRESS enhanced model can be used internally (e.g., iteration acceleration) or externally (e.g., sensitivity studies). By calling GRESS run-time routines, derivatives can be propagated through the code via the chain rule (referred to as the CHAIN option) or accumulated to create an adjoint matrix (referred to as the ADGEN option). A third option, GENSUB, makes it possible to process a subset of a program (i.e., a do loop, subroutine, function, a sequence of subroutines, or a whole program) for calculating derivatives of dependent variables with respect to independent variables.

8415 (ORNL/TM–11960) **Block sparse Cholesky algorithms on advanced uniprocessor computers.** Ng, E.G.; Peyton, B.W. Oak Ridge National Lab., TN (United States). Dec 1991. 35p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE92004167. Source: OSTI; NTIS; GPO Dep.

As with many other linear algebra algorithms, devising a portable implementation of sparse Cholesky factorization that performs well on the broad range of computer architectures currently available is a formidable challenge. Even after limiting our attention to machines with only one processor, as we have done in this report, there are still several interesting issues to consider. For dense matrices, it is well known that block factorization algorithms are the best means of achieving this goal. We take this approach for sparse factorization as well. This paper has two primary goals. First, we examine two sparse Cholesky factorization algorithms, the multifrontal method and a blocked left-looking sparse Cholesky method, in a systematic and consistent fashion, both to illustrate the strengths of the blocking techniques in general and to obtain a fair evaluation of the two approaches. Second, we assess the impact of various implementation techniques on time and storage efficiency, paying particularly close attention to the work-storage requirement of the two methods and their variants.

8416 (ORNL/TM-11986) **NA-NET numerical analysis net.** Dongarra, J. (Tennessee Univ., Knoxville, TN (United States). Dept. of Computer Science); Rosener, B. Oak Ridge National Lab., TN (United States). Dec 1991. 30p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE92004166. Source: OSTI; NTIS; GPO Dep.

This report describes a facility called NA-NET created to allow numerical analysts (na) an easy method of communicating with one another. The main advantage of the NA-NET is uniformity of addressing. All mail is addressed to the Internet host "na-net.ornl.gov" at Oak Ridge National Laboratory. Hence, members of the NA-NET do not need to remember complicated addresses or even where a member is currently located. As long as moving members change their e-mail address in the NA-NET everything works smoothly. The NA-NET system is currently located at Oak Ridge National Laboratory. It is running on the same machine that serves netlib. Netlib is a separate facility that distributes mathematical software via electronic mail. For more information on netlib consult, or send the one-line message "send index" to netlib@ornl.gov. The following report describes the current NA-NET system from both a user's perspective and from an implementation perspective. Currently, there are over 2100 members in the NA-NET. An average of 110 mail messages pass through this facility daily.

8417 (ORNL/TM-12003) **A parallel algorithm for the nonsymmetric eigenvalue problem.** Dongarra, J. (Tennessee Univ., Knoxville, TN (United States). Dept. of Computer Science); Sidani, M. Oak Ridge National Lab., TN (United States). Dec 1991. 52p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. Order Number DE92004087. Source: OSTI; NTIS; GPO Dep.

This paper describes a parallel algorithm for computing the eigenvalues and eigenvectors of a non-symmetric matrix. The algorithm is based on a divide-and-conquer procedure and uses an iterative refinement technique.

8418 (ORNL/TM-12006) **Reduction to condensed form for the eigenvalue problem on distributed memory architectures.** Dongarra, J.J. (Tennessee Univ., Knoxville, TN (United States). Dept. of Computer Science); van de Geijn, R.A. Oak Ridge National Lab., TN (United States). Jan 1992. 20p. Sponsored by U.S. DOE Energy Research; National Science Foundation. DOE Contract AC05-84OR21400. Order Number DE92004291. Source: OSTI; NTIS; GPO Dep.

In this paper, we describe a parallel implementation for the reduction of general and symmetric matrices to Hessenberg and tridiagonal form, respectively. The methods are based on LAPACK sequential codes and use a panel-wrapped mapping of matrices to nodes. Results from experiments on the Intel Touchstone Delta are given.

8419 **Video image position determination.** Christensen, W.; Anderson, F.L.; Kortegaard, B.L. To Dept. of Energy. 1990. Filed date 2 Apr 1990. USA Patent patent application 7-502,959. 30p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-36. Order Number DE92003834. Source: OSTI; NTIS; GPO Dep.

The present invention generally relates to the control of video and optical information and, more specifically, to control systems utilizing video images to provide control. Accurate control of video images and laser beams is becoming increasingly important as the use of lasers for machine, medical and experimental processes escalates. In, AURORA, an installation at Los Alamos National Laboratory dedicated to laser fusion research, it is necessary to precisely control the path and angle of up to 96 lasers beams. This invention is comprised of an optical beam position controller in which a video camera captures an image of the beam in its video frames, and conveys those images to a processing board which calculates the centroid coordinates for the image. The image coordinates are used by motor controllers and stepper motors to position the beam in a predetermined alignment. In one embodiment, system noise, used in conjunction with Bernoulli trials, yields higher resolution centroid coordinates.

8420 (SAND-91-1633C) **Wavenumber-domain SAR focusing from a nonuniform synthetic aperture.** Flynn, T.J. Sandia National Labs., Albuquerque, NM (United States). [1991]. 12p. Sponsored by U.S. DOE Defense Programs. DOE Contract AC04-76DP00789. (CONF-920354-1: 1992 IEEE international conference on acoustics, speech and signal processing, San Francisco, CA (United States), 23-26 Mar 1992). Order Number DE92003640. Source: OSTI; NTIS; GPO Dep.

In the wavenumber-domain concept of SAR imaging, frequency-domain radar data are used to reconstruct a portion of the 2-D Fourier transform of the scene, which is then inverted to create the image. The method suffers no inherent limits on aperture length or scene size. This paper extends the concept to the case where the synthetic aperture is not a straight line and the samples are unevenly spaced. An accumulation formula for wavenumber-domain reconstruction is derived and shown to be equivalent to previously derived algorithms in the uniform-aperture case. It is then shown how data with three-dimensional irregularity in the aperture can be processed using height correction and mapping into the same plane. 10 refs., 3 figs.

8421 (SAND-91-1752) **PHYSLIB: A C++ tensor class library.** Budge, K.G. Sandia National Labs., Albuquerque, NM (United States). 9 Oct 1991. 86p. Sponsored by U.S. DOE Defense Programs. DOE Contract AC04-76DP00789. Order Number DE92004113. Source: OSTI; NTIS; GPO Dep.

C++ is the first object-oriented programming language which produces sufficiently efficient code for consideration in computation-intensive physics and engineering applications. In addition, the increasing availability of massively parallel architectures requires novel programming techniques which may prove to be relatively easy to implement in C++. For these reasons, Division 1541 at Sandia National Laboratories is devoting considerable resources to the development of C++ libraries. This document describes the first of these libraries to be released, PHYSLIB, which defines classes representing Cartesian vectors and (second-order) tensors. This library consists of the header file physlib.h, the inline code file physlib.inl, and the source file physlib.C. The library is applicable to both three-dimensional and two-dimensional problems; the user selects the 2-D version of the library by defining the symbol TWO D in the header file physlib.h and recompiling physlib.C and his own code. Alternately, system managers may wish to provide duplicate header and object modules of each dimensionality. This code was produced under the auspices of Sandia National Laboratories, a federally-funded research center administered for the United States Department of Energy on a non-profit basis by AT&T. This code is available to US citizens, and institutions under research, government use and/or commercial license agreements.

8422 (SAND-91-2864) **SANET 1.0 User's Guide and Reference Manual.** Camp, A.L. (Sandia National Labs., Albuquerque, NM (United States)); Abeyta, L.P. Sandia National Labs., Albuquerque, NM (United States). Dec 1991. 45p. Sponsored by U.S. DOE Defense Programs. DOE Contract AC04-76DP00789. Order Number DE92005563. Source: OSTI; NTIS; GPO Dep.

SANET is a computer program intended for use in constructing, evaluating, and printing event trees for safety and reliability studies. SANET allows the user to graphically construct event trees, assign probabilities to the branches on the tree and include a variety of labels. Fast, publication quality printed output can be obtained. SANET requires an IBM compatible PC with a 80286, 80386 or 80486 processor, VGA graphics, a mouse and an HP Laserjet printer.

8423 (SKB-TR-91-18) **Numerical inversion of Laplace transforms using integration and convergence acceleration.** Gustafson, S.Aa. (Rogaland Univ., Stavanger (Norway)). Swedish Nuclear Fuel and Waste Management Co., Stockholm (Sweden). May 1991. 70p. Order Number DE92614105. Source: OSTI; NTIS (US Sales Only); INIS.

This report describes a computational scheme for the numerical inversion of Laplace transforms in the case when all singularities occur on the real line. The determination of the value of the inverse function at a given point t proceeds in four major steps: * Using the Bromwich inversion formula the inverse is represented as an integral over an infinite interval. * By means of the trapezoidal rule this integral is written as an infinite sum. * The sum is converted to a power series. * This power series is evaluated using convergence acceleration. In order to carry out the last step in an efficient way an aggregation of terms is employed to ensure stability and rapid convergence. The truncation error decreases exponentially with the number of terms used and this fact may be exploited in error estimation and the selection of corresponding parameters in the computer programs. If certain general conditions are satisfied, then only a finite number of parameters is required to specify a function with a preselected accuracy. Thus the values of the inverse transform are calculated on a finite grid, and the transform is determined at all other points with interpolation. It is described how to construct the grid to guarantee that the resulting error does not surpass a bound, defined by the user. An inversion routine based on the ideas put forth in this report has been developed for use with the PROPER code package. (au).

8424 (SKB-TR-91-19) **NEAR21 - A near field radionuclide migration code for use with the PROPER package.** Norman, S. (Starprog AB (Sweden)); Kjellbert, N. Swedish Nuclear Fuel and Waste Management Co., Stockholm (Sweden). Apr 1991. 39p. Order Number DE92614106. Source: OSTI; NTIS (US Sales Only); INIS.

The near field radionuclide migration computer code NEAR21 has been developed as a submodel of the probabilistic package PROPER, and can be considered a PROPER version of the near field models used in the KBS-3 study. NEAR21 computes the migration rates of radionuclide chains from the near field of one KBS-3 canister. Diffusive transport, canister corrosion, fuel matrix dissolution, solubility limitations under oxidizing and reducing conditions, washout of instantly released portions of the inventories and chain decay are all taken into account. (au).

8425 (SKB-TR-91-26) **Testing of parameter averaging techniques for far-field migration calculations using FARF31 with varying velocity.** Bengtsson, A. (Kemakta Consultants Co., Stockholm (Sweden)); Boghammar, A.; Grundfelt, B.; Rasmuson, A. Swedish Nuclear Fuel and Waste Management Co., Stockholm (Sweden). Jun 1991. 49p. Order Number DE92614107. Source: OSTI; NTIS (US Sales Only); INIS.

This report was prepared for SKB as a part of the SKB 91 performance assessment study. The object of the study was to test different averaging techniques for averaging velocity profiles. The average velocities obtained with the different techniques were used to set appropriate values on the Peclet number, Pe, and the groundwater travel time t_w, and used as input to the FARF31 code. The output from the FARF31 calculations were compared against numerical simulations made with TRUCHN. Three different averaging techniques were tested: volume averaging, flow averaging and a technique based on the principle of additive variances. Four different nuclides were studied, ^{238}U, ^{237}Np, ^{135}Cs and ^{129}I. Five velocity profiles were tested, four generic profiles and one particle track from the groundwater flow calculations made for the Finnsjoe site. (au).

8426 (SKB-TR-91-27) **Verification of HYDRASTAR - A code for stochastic continuum simulation of groundwater flow.** Norman, S. (Starprog AB (Sweden)). Swedish Nuclear Fuel and Waste Management Co., Stockholm (Sweden). Jul 1991. 74p. Order Number DE92614108. Source: OSTI; NTIS (US Sales Only); INIS.

HYDRASTAR is a code developed at Starprog AB for use in the SKB 91 performance assessment project with the following principal function: Reads the actual conductivity measurements from a file created from the data base GEOTAB. Regularizes the measurements to a user chosen calculation scale. Generates three dimensional unconditional realizations of the conductivity field by using a supplied model of the conductivity field as a stochastic function. Conditions the simulated conductivity field on the actual regularized measurements. Reads the boundary conditions from a regional deterministic NAMMU computation. Calculates the hydraulic head field, Darcy velocity field, stream lines and water travel times by solving the stationary hydrology equation and the streamline equation obtained with the velocities calculated from Darcy's law. Generates visualizations of the realizations if desired. Calculates statistics such as semivariograms and expectation values of the output fields by repeating the above procedure by iterations of the Monte Carlo type. When using computer codes for safety assessment purpose validation and verification of the codes are important. This report describes a work performed with the goal of verifying parts of HYDRASTAR. The verification described uses comparisons with two other solutions of related examples: Comparison with a so called perturbation solution of the stochastical stationary hydrology equation. This as an analytical approximation of the stochastical stationary hydrology equation valid in the case of small variability of the unconditional random conductivity field. Comparison with the (Hydrocoin, 1988), case 2. This is a classical example of a hydrology problem with a deterministic conductivity field. The principal feature of the problem is the presence of narrow fracture zones with high conductivity. The compared output are the hydraulic head field and a number of stream lines originating from a set of given positions.

8427 (SKB-TR-91-30) **A resistance network model for radionuclide transport into the near field surrounding a repository for nuclear waste (SKB, Near Field Model 91).** Nilsson, L. (Royal Institute of Technology, Stockholm (Sweden). Dept. of Chemical Engineering); Moreno, L.; Neretnieks, I.; Romero, L. Swedish Nuclear Fuel and Waste Management Co., Stockholm (Sweden). Jun 1991. 77p. Order Number DE92614109. Source: OSTI; NTIS (US Sales Only); INIS.

A model has been developed, describing the steady state transport of dissolving species of radionuclides from a single canister in a repository for spent nuclear fuel out into the passing water in fractures in the surrounding rock matrix. The transport of nuclides is described by a network of transport resistances, coupled together in the same way as an electrical circuit network. With the model a number of calculations are done for various sets of fracture geometry data. The calculations indicate that the resistance network model gives results comparable to those of a complex 3-dimensional numerical model. (au).

8428 (SKB-TR-91-31) **Near field studies within the SKB 91 Project.** Widen, H. (Kemakta Consultants AB, Stockholm (Sweden)); Bengtsson, A.; Grundfelt, B. Swedish Nuclear Fuel and Waste Management Co., Stockholm (Sweden). Jun 1991. 66p. Order Number DE92614110. Source: OSTI; NTIS (US Sales Only); INIS.

A number of near field studies was preformed during the early part of the SKB91 project. This report summaries this work and includes: - Simulation of the steady release from the near field with different time for canister penetration. - Simulation of the release from a repository with 5300 canisters with different penetration times for different parts of the canisters due to manufacturing error, glaciations, inner over pressure and corrosion. - Calculation with a numerical model of the transient release of the instantaneously dissolvable species and the effect of different boundary conditions both at the canister/bentonite and the bentonite/rock interface. - Description of the implementation of a resistance network model for the calculation of the steady state transport resistances in the different pathways from the canisters. - Comparison of two analytical models for the calculation of the release of the instantaneously dissolvable species. (au).

8429 (UCRL-53868-90, pp. 2.7-2.11) **Solution strategies for implicit, nonlinear finite element analysis.** Whirley, R.G.; Engelmann, B.E. Lawrence Livermore National Lab., CA (United

States). Aug 1991. In *Engineering research and development thrust area report, FY 90.* 246p. Order Number DE92000519. Source: OSTI; NTIS (US Sales Only).

The development of effective solution strategies to solve the global nonlinear equations which arise in implicit finite element analysis is an important area of research, and it is the subject of this investigation. Efficient strategies make good use of computational resources, and allow larger and more complex analysis models to be studied. Robust algorithms are essential to handle the complex nonlinearities which arise in many LLNL applications, such as metalforming process simulation. The authors research indicates that robustness can be best achieved in a general setting through adaptive solution strategies. This adaptivity and flexibility has been incorporated into NIKE2D through the development of ISLAND (Interactive Solution Language for an Adaptive Nike Driver). These new solution control features make NIKE2D a smart code, and permits us to address many new and challenging problems.

8430 (UCRL–53868-90, pp. 8.228.26) **Signal and image processing software development.** Brase, J.M.; Gavel, D.T.; Wieting, M.G.; Sherwood, R.J.; Hernandez, J.E. Lawrence Livermore National Lab., CA (United States). Aug 1991. In *Engineering research and development thrust area report, FY 90.* 246p. Order Number DE92000519. Source: OSTI; NTIS (US Sales Only).

Software development projects sponsored by the Remote Sensing, Imaging, and Signal Engineering (RISE) thrust area have produced a set of tools which have been applied to a variety of signal and image processing problems at LLNL and the world at learge. These general-purpose tools apply to a broad set of applications that include remote sensing, weapons, test diagnostics, and nondestructive evaluation. The tools also form a capability base that attracts new applciations with the potential to build new LLNL programs. The authors have distributed these signal and image processing systems successfully to codevelopers around the world. They are using these systems for applications in government agencies and private industry and as teaching tools in universities. The outside contacts and the many new ideas they have fostered have enriched their program and their development efforts. They have continued the development of three image and signal processing software systems - View, ISLE (Image and Signal Processing LISP Environment), and Mat/C - adding new functions, tools, and options, increasing portability, and publishing new documentation.

8431 (UCRL–53868-90, pp. 8.27-8.34) **Real-time multidimensional signal processing technology.** Roberson, G.P.; Azevedo, S.G.; Current, K.W.; Hurst, P.J. Lawrence Livermore National Lab., CA (United States). Aug 1991. In *Engineering research and development thrust area report, FY 90.* 246p. Order Number DE92000519. Source: OSTI; NTIS (US Sales Only).

The authors are developing high performance implementations of a two- and three-dimensional signal processing algorithm, the Radon transform. They have taken three different approaches to this challenge. The first approach is the Radon Transform Processor (RTP) which uses a multi-processor arrangement of commercial chips to perform a rapid Radon transform and its inverse for image reconstruction. The second is the design of a custom CMOS VLSI chip capable of 2-D image processing at a 27- to 50-MHz data rate. These first two projects were undertaken at the University of California at Davis, and have delivered solutions to the fast implementation of the 2-D Radon transform. The third approach is the development of hardware at LLNL to overcome the increasingly critical 3-D image processing problem. They have designed a special purpose coprocessor to perform 3-D image reconstructions from Radon space.

8432 (UCRL-ID–106314) **Limit of sensitivity of low-background counting equipment.** Homann, S.G. Lawrence Livermore National Lab., CA (United States). 8 Oct 1991. 6p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. Order Number DE92004629. Source: OSTI; NTIS; INIS; GPO Dep.

The Hazards Control Department's Radiological Measurements Laboratory (RML) analyzes many types of sample media in support of the Laboratory's health and safety program. The Department has determined that the equation for the minimum limit of sensitivity, $MDC(\alpha,\beta) = 2.71 + 3.29\ (r_b t_s)^{\frac{1}{2}}$ is also adequate for RML counting systems with very-low-background levels. This paper reviews the normal distribution case and address the special case of determining the limit of sensitivity of a counting system when the background count rate is well known and small. In the latter case, we must use an exact test procedure based on the binomial distribution. However, the error in using the normal distribution for calculating a detection system's limit of sensitivity is not significant even as the total observed number of counts approaches or equals zero. 2 refs., 4 figs.

8433 (UCRL-ID–108228) **General purpose parallel supercomputing.** Nielsen, D.E. Jr. Lawrence Livermore National Lab., CA (United States). 19 Jun 1991. 12p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. Order Number DE92004631. Source: OSTI; NTIS; GPO Dep.

Recent advances in the hardware and software of parallel computers have opened up two new opportunities to focus programmatic resources. First, these new machines enable the smooth transition of an organization's general purpose computing load onto massively parallel processors. Second, these advances allow "capability" machines to economically serve the "capacity" needs of a large research or industrial organization. 6 figs.

8434 (UCRL-JC–104008) **SISAL reference manual: Language version 2.0.** Oldehoeft, R.R. (ed.) (Colorado State Univ., Fort Collins, CO (United States). Dept. of Computer Science); Boehm, A.P.W.; Grit, D.H.; Cann, D.C. (ed.); Feo, J.T. Lawrence Livermore National Lab., CA (United States). May 1990. 127p. Sponsored by U.S. DOE Energy Research. DOE Contract W-7405-ENG-48. (CONF-9006328–2: Asilomar conference on circuits, systems, and computers, Pacific Grove, CA (United States), 5-8 Jun 1990). Order Number DE92004660. Source: OSTI; NTIS; GPO Dep.

In this report we describe the SISAL 2.0 programming language. The project began in 1982 as a cooperative venture by Digital Equipment Corporation, the University of Manchester (England), Lawrence Livermore National Laboratory, and Colorado State University. The project's goals evolved to become: Define a general-purpose functional language that can run efficiently on conventional and novel parallel architectures; define a dataflow graph intermediate form independent of language and target architecture; develop optimization techniques for high-performance applicative computing;develop a thread management environment to support dataflow-style parallel computing on conventional shared-memory multiprocessors; achieve sequential and parallel execution performance competitive with programs written in conventional languages; and validate the functional style of programming for large-scale scientific applications.

8435 (UCRL-JC–104491) **Bumps and potholes on the road to network computing.** Watson, R.W. Lawrence Livermore National Lab., CA (United States). Jul 1990. 7p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-9004179–2: Cray users group conference, Toronto (Canada), Apr 1990). Order Number DE92003977. Source: OSTI; NTIS; GPO Dep.

Network computing in a supercomputer environment offers the potential to improve user productivity and enable users to take advantage of the rapidly improving cost/performance of microelectronics through use of hierarchies of processing, storage, I/O and communication resources. Our experience to date indicates that to realize the potential will not only require improvements in operating systems and programming environments, but more importantly will require very high availability networks and a new support infrastructure. This paper outlines some of the potholes and bumps we have run into during recent years in our goal to make network computing an everyday reality for our user community. While some recommendations are made that can smooth the ride, most of the potholes and bumps yet remain to be leveled. 2 figs.

8436 (UCRL-JC–108590) **Software tools for distributed intelligent control systems.** James, J.R. (Army Training and Doctrine Command, Fort Monroe, VA (United States)); Herget, C.J. Lawrence Livermore National Lab., CA (United States). Oct 1991.

7p. Sponsored by U.S. DOE Environment Safety & Health. DOE Contract W-7405-ENG-48. (CONF-9109316–2: 3. International Federation of Automatic Control (IFAC) international workshop on artificial intelligence in real time control, Phonert Park, CA (United States), 23-25 Sep 1991). Order Number DE92004656. Source: OSTI; NTIS; GPO Dep.

The future of intelligent control systems depends upon the extent to which Artificial Intelligence (AI) technology can help control engineers deliver practical solutions to difficult control engineering problems. Conventional control design approaches have achieved notable successes in the design and implementation of robust, adaptive controllers for systems with well-defined mathematical models. However, conventional approaches have had difficulty supporting engineers in the design and implementation of control systems when an accurate mathematical model is not available. Also, verification that computer-controlled systems perform to specifications, validation of the specifications, higher-level control, operator decision aids, system diagnosis, operator alerting, and reconfiguration of systems which experience large changes over time or potentially catastrophic failures are significant challenges to control science and engineering. It is in these difficult areas where the AI technologies of knowledge representation, learning, search, diagnosis, planning, and decision are being used to aid control engineers. Algorithms for computer-controlled systems and software tools to help implement these algorithms have been a subject of research and commercialization for decades. Computer-Aided Control Engineering (CACE) tools have achieved a degree of success in the past decade based on their ability to assist in the control system design and implementation process. Specialized tools have been made available for system identification, system simulation, controller design and controller implementation. Recently, efforts have been made to build integrated CACE environments. This paper will describe the results of the workshop and subsequent efforts to use these results to shape a DARPA software development project.

8437 (UCRL-JC–108648) **Developing a broader basis for scientific data analysis interfaces.** Springmeyer, R.R.; Blattner, M.M.; Max, N.L. Lawrence Livermore National Lab., CA (United States). [1991]. 8p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-9105285–2: CHI '92, Monterey, CA (United States), 3-7 May 1991). Order Number DE92003963. Source: OSTI; NTIS; GPO Dep.

Typical interfaces for recent scientific data analysis tools have emphasized visualization. Their focus on images can obscure the goal of the scientific data analysis process, which is an understanding of some physical phenomenon. We present the results of a two-phase study of this process, undertaken to inform the design of analysis tools with a broader basis. In the first phase, scientists from several disciplines were interviewed and observed while analyzing their own data. The observations exposed elements of scientific data analysis such as quantitative queries and comparisons, simple calculations, data culling, and record keeping. These elements form the basis of a scientific data analysis description which extends beyond image viewing. The second phase demonstrates how this broader understanding can be applied, with the design and implementation of a tool for culling regions of interest from large, complex data sets. Observations of the prototype tool in use reveal the effectiveness of a quantitative approach to culling complex data sets. The results of this study are three-fold: a method for studying a single-person process, a description of the fundamental elements of scientific data analysis, and a successful demonstration of applying this broader knowledge with a prototype implementation. 13 refs., 4 figs.

8438 (UCRL-JC–108711) **LLNL experience with HIPPI.** Getchell, D. Lawrence Livermore National Lab., CA (United States). Oct 1991. 9p. Sponsored by U.S. DOE Defense Programs. DOE Contract W-7405-ENG-48. (CONF-9109276–8: Visions of supercomputing conference, Santa Fe, NM (United States), 23-27 Sep 1991). Order Number DE92004658. Source: OSTI; NTIS; GPO Dep.

The High Performance Switching System Program (HPSS) at the Lawrence Livermore National Laboratory is in the process of implementing a gigabit Local Area Network featuring cross bar switches that interface to HIPPI, VME, and NuBus adapters. This paper presents a brief review of the design of the HPSS network, discusses our experiences with using HIPPI as an interconnect in a Local Area Network and describes our efforts to achieve maximum performance from our Model C and D IOS Cray systems.

8439 (CONF-9110249–1) **Text encoding for retrieving scientific and technical information.** Strehlow, R.A.; Tallant, T.O.; Mason, J.D.; Kienlen, P.L. Oak Ridge National Lab., TN (United States). [1991]. 19p. Sponsored by U.S. DOE Energy Research. DOE Contract AC05-84OR21400. From International symposium on terminology and documentation in specialized communication; Ontario, (Canada); 7-8 Oct 1991. Order Number DE92004403. Source: OSTI; NTIS; GPO Dep.

The authors have recently proposed a method a manage and to retrieve scientific and technical information based on the encoding of information within the document using Standard Generalized Markup Language (SGML). The encoding will include the scientific and technical information, as well as associated and ancillary scientific data, management data, and other metadata. The work proposed at the Oak Ridge National Laboratory will include tagset selection, document type definition writing, test document encoding, and programming that will permit various views of a document to be made. This paper describes the proposed method and work. Precise retrieval of contained information is conventionally done by means of Boolean searches to retrieve a set of documents that have been probability of containing the desired information. Standardized terminologies have long been a key element in constructing efficient search plans for these searches. Combined with added techniques of corpus selection, author or institution restriction, etc., effective searches can often be constructed. With the increase in corpus size, however, the standard methods become progressively less effective. The planned method described here involves a radically different approach to the retrieval problems. Its objective is the direct retrieval of information. The work of this study will be carried out by a multi-disciplinary team of engineering, scientific, publication, and information specialists. Computer programs to retrieve information from encoded sample documents will be either acquired or written and then tested. At the final stage of the work, after evaluation of the program, plans will be developed to apply the method to a wide range of specialized fields.

8440 (DOE/ER/25063–T11) **The ADAMS interactive dictionary browser.** Segal, B.M. Virginia Univ., Charlottesville, VA (United States). Dept. of Computer Science. 17 Dec 1990. 27p. Sponsored by U.S. DOE Energy Research. DOE Contract FG05-88ER25063. Order Number DE91014347. Source: OSTI; NTIS; GPO Dep.

The ADAMS-IDB is concerned with the structure created by the user's DDL statements and provides a graphically interactive environment to facilitate searching the schema. This paper gives a brief overview of ADAMS and presents the terminology that is necessary for a user of the ADAMS-IDB. Section 3 discusses the ADAMS-IDB itself. First, a description of the tool is given followed by a discussion of why and how the tool was developed. Section 4 discusses how the browser is structured. Section 5 discusses some observations the developer had concerning the ADAMS project in general while building the graphical interface. Section 6 is a User Guide which examines the ADAMS-IDB's graphical interface from a user point of view and steps the user through invocation, browsing, and termination of the ADAMS-IDB. Finally, Section 7 describes the output displayed by the browser and walks through an example of its usage. 5 refs., 9 figs.

8441 (K/CSD/TM–93-Rev.1) **Project Records Information System (PRIS) user's manual: Revision 1.** Smith, P.S.; Nations, J.A.; Short, R.D. Oak Ridge K-25 Site, TN (United States). Aug 1991. 72p. Sponsored by U.S. DOE Nuclear Energy. DOE Contract AC05-84OT21400. Order Number DE92000149. Source: OSTI; NTIS; GPO Dep.

The Projects Record Information System (PRIS) is an interactive system developed for the Information Services Division (ISD) of Martin Marietta Energy Systems, Inc., to perform indexing, maintenance, and retrieval of information about Engineering project record documents for which they are responsible. This PRIS User's Manual provides instruction on the use of this system. Section 2.0 of this manual presents an overview of PRIS, describing the system's purpose; the data that it handles, functions it performs; hardware, software, and access; and help and error functions. Section 3.0 describes the interactive menu-driven operation of PRIS. Appendixes A, B,C, and D contain the data dictionary, help screens, report descriptions, and a primary menu structure diagram, respectively.

8442 (K/CSD/TM–95/Rev.1) **Engineering Design Information System (EDIS) user' manual: Revision 1.** Smith, P.S.; Short, R.D. Oak Ridge K-25 Site, TN (United States). Nov 1991. 89p. Sponsored by U.S. DOE Nuclear Energy. DOE Contract AC05-84OT21400. Order Number DE92004110. Source: OSTI; NTIS; GPO Dep.

This manual is a guide to the use of the Engineering Design Information System (EDIS). The system runs on the Martin Marietta Energy Systems, Inc., IBM 3084 unclassified computer. EDIS is in the second phase of implementation, which provides an index, storage, and retrieval system for engineering documents produced at various plants and laboratories operated by Energy Systems for the Department of Energy (DOE). The second phase also provides additional hard copy request functionality. Section 2.0 of this manual presents an overview of EDIS, describing the system's purpose; the functions it performs; hardware, software, and security requirements; and help and error functions. Section 3.0 describes how to access EDIS and how to operate system functions using Database 2 (DB2), Time Sharing Option (TSO), Interactive System Productivity Facility (ISPF), Soft Master viewing, and FT/Express file transfer features employed by this system. Appendix A lists the special hardware and software requirements that must be met to run the View function. Appendix B contains a description of the Soft Master viewing capabilities provided through the EDIS View function. Appendix C contains a list of special hardware and software requirements for the Store and Download functions of EDIS. Appendix D provides examples of the system error screens and help screens for valid codes used for screen entry. Appendix E contains a dictionary of data elements and descriptions.

8443 (LBL–30104) **Problems underlying the use of referential integrity mechanisms in relational database management systems.** Markowitz, V.M. Lawrence Berkeley Lab., CA (United States). Dec 1990. 9p. Sponsored by U.S. DOE Energy Research. DOE Contract AC03-76SF00098. (CONF-9104321–1: 7. IEEE international conference on data engineering, Kobe (Japan), 8-12 Apr 1991). Order Number DE92004304. Source: OSTI; NTIS; GPO Dep.

Referential integrity is used in relational data-bases for expressing existence dependencies between tuples. Relational database management systems (RDBMS) provide diverse referential integrity capabilities. Thus, is some RDBMSs referential integrity constraints can be specified non-procedurally (declaratively), while in other RDBMSs they must be specified procedurally. Moreover, some RDBMSs restrict the class of allowed referential integrity constraints. We examine in this paper the main problems underlying the use of referential integrity mechanisms in three representative RDBMSs, DB2, SYBASE, and INGRES. 11 refs.

8444 (LRP–430/91) **Neural networks in front-end processing and control.** Lister, J.B. (Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP)); Schnurrenberger, H.; Staeheli, N.; Stockhammer, N.; Duperrex, P.A.; Moret, J.M. Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP). Jul 1991. 9p. (CONF-9106122–: 7. international conference on real time computer applications in nuclear, particle and plasma physics, Juelich (Germany), 18-28 Jun 1991). Order Number DE92614099. Source: OSTI; NTIS (US Sales Only); INIS.

Invited paper presented at the 7. conference real time '91, at KFA Juelich, FRG, 24-28 Jun 1991.

Research into neural networks has gained a large following in recent years. In spite of the long term timescale of this Artificial Intelligence research, the tools which the community is developing can already find useful applications to real practical problems in experimental research. One of the main advantages of the parallel algorithms being developed in AI is the structural simplicity of the required hardware implementation, and the simple nature of the calculations involved. This makes these techniques ideal for problems in which both speed and data volume reduction are important, the case for most front-end processing tasks. In this paper we illustrate the use of a particular neural network known as the Multi-Layer Perceptron as a method for solving several different tasks, all drawn from the field of Tokamak research. We also briefly discuss the use of the Multi-Layer Perceptron as a non-linear controller in a feedback loop. We outline the type of problem which can be usefully addressed by these techniques, even before the large-scale parallel processing hardware currently under development becomes cheaply available. We also present some of the difficulties encountered in applying these networks. (author) 13 figs., 9 refs.

8445 (MLM–3711) **Collection, presentation, and analysis of inspection data.** Applegate, C.A.; Tibbs, M.A.; Ratliff, L.R.; Wyder, W.C. Mound, Miamisburg, OH (United States). 6 Nov 1991. 50p. Sponsored by U.S. DOE Defense Programs. DOE Contract AC04-88DP43495. Order Number DE92003738. Source: OSTI; NTIS; GPO Dep.

The handling of large volumes of inspection data printouts was a problem in PM Building, where the inspection data were being generated from Computer Numerical Controlled Coordinate Measuring Machines (CMM). The inspection of a group of 600 pieceparts could generate a stack of printer paper five to six inches high. To collect only the useful data from the inspections, a change to the CMM software was purchased, which allows the transfer of only measurement data to a second computer. From the second computer, the data are saved in a tabular format to a floppy disk, using a piece of software created especially for this purpose. The floppy disk is then used to transfer the data to a computer workstation where it is made presentable and analyzed in a LOTUS spreadsheet. From the analysis, the inspected product can be accepted or rejected; the capability of the process can be determined; and finally, future inspection requirements can be evaluated and modified. This technique results in a compact document or electronic file containing all the important data in a presentable, usable, and easily understood format. 33 figs.

8446 **Spatial optic multiplexer/diplexer.** Tremblay, P.L. To Dept. of Energy. 1990. Filed date 22 Jun 1990. USA Patent patent application 7-542,215. 16p. Sponsored by U.S. DOE Nuclear Energy. DOE Contract AC07-76ID01570. Order Number DE92003813. Source: OSTI; NTIS; GPO Dep.

The present invention relates generally to secure fiber optic communications and more particularly to an apparatus which effects the efficient coupling of light from multiple optic fibers into a single optic fiber. This invention is comprises of an apparatus for simultaneous transmission of optic signals having different wavelengths over a single optic fiber. Multiple light signals are transmitted through optic fibers that are formed into a circumference surrounding a central core fiber. The multiple light signals are directed by a lens into a single receiving fiber where the light combines and is then focused into the central core fiber which transmits the light to a wavelength discriminating receiver assembly. 2 figs.

8447 (WHC-EP–0372-Vol.1-Rev.1) **Hanford Environmental Information System (HEIS) user's manual: Volume 1, Revision 1.** Westinghouse Hanford Co., Richland, WA (United States). Oct 1991. 833p. Sponsored by U.S. DOE Office of Environmental Restoration and Waste Management. DOE Contract AC06-87RL10930. Order Number DE92003953. Source: OSTI; NTIS; INIS; GPO Dep.

The Hanford Environmental Information System (HEIS) is a consolidated set of automated resources that effectively manage the data gathered during environmental monitoring and restoration of the Hanford Site. The HEIS includes an integrated database that provides consistent and current data to all users and promotes sharing of data by the entire user community. Data stored in the HEIS are collected under several regulatory programs. Currently these include the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA); the Resource Conservation and Recovery Act of 1976 (RCRA); and the Ground-Water Environmental Surveillance Project, managed by the Pacific Northwest Laboratory. The HEIS is an information system with an inclusive database. The manual, the HEIS User's Manual, describes the facilities available to the scientist, engineer, or manager who uses the system for environmental monitoring, assessment, and restoration planning; and to the regulator who is responsible for reviewing Hanford Site operations against regulatory requirements and guidelines.

8448 (WHC-SA–1182) **Development of an administrative record system and information repository system to support environmental cleanup at the Hanford Site in Richland, Washington.** Sprouse, B.S. Westinghouse Hanford Co., Richland, WA (United States). Sep 1991. 15p. Sponsored by U.S. DOE Office of Environmental Restoration and Waste Management. DOE Contract AC06-87RL10930. (CONF-910981–32: Environmental remediation '91 conference, Pasco, WA (United States), 8-11 Sep 1991). Order Number DE92002049. Source: OSTI; NTIS; INIS; GPO Dep.

The purpose of this paper is to describe the development of an administrative record (AR) file system for the Hanford Site in Richland, Washington. This paper will focus on the background of the AR system and its implementation at the Hanford Site; the types of documents to be included in an AR file; the management system used to develop and implement the AR system; the unique characteristics of the AR system and the role of the information repositories. The objective of this session is to present the methodology used in developing an AR and information repository system so that common hurdles from various sites can be addressed and resolved similarly. Therefore unnecessary effort does not have to be put forth to resolve the same issues over and over again. The concepts described can be applied to all federal facility sites with a minimum amount of modification and revision. 9 refs.

8449 (WHC-SA–1292) **Beyond the media: A new strategy for distributing scientific and technical information.** Preecs, B.L. Westinghouse Hanford Co., Richland, WA (United States). Nov 1991. 12p. Sponsored by U.S. DOE Office of Administration and Human Resource Management. DOE Contract AC06-87RL10930. (CONF-920145–1: Making information work, Washington, DC (United States), 21-23 Jan 1992). Order Number DE92003633. Source: OSTI; NTIS; GPO Dep.

Communications media – newspapers, television, magazines, etc. – may be the most powerful single influence on modern life. Certainly they are the most important source of information citizens use to form opinions about such complex scientific questions as global warming or nuclear waste cleanup. But commercial news media have built-in limitations on their effectiveness as information sources. Reliance on advertising for revenue means the media are limited in the volume of material they can cover. In addition, the need to attract the largest possible, or the most select, audience for advertisers limits the complexity of information that the media can present. Finally, existing media organizations offer few, if any, ways for users to retrieve past information. These limitations deprive citizens of needed information, increase pressure on political leaders, and create the gridlock over scientific and public policy questions caused by the "Not in My Backyard" snydrome. Fortunately, modern communications technology is changing in ways that allow public policy makers to address these shortenings. Companies now barred from the information business are seeking to enter, existing media companies are looking for new sources of revenue, and new information products are seeking markets. Several changes to existing media and communications policy will be suggested and general principles for building a better overall communications system will be discussed. 18 refs.

8450 (IAEA-INFCIRC–397) **Note to the Director General from the Ministry of Foreign Affairs of The Russian Federation.** International Atomic Energy Agency, Vienna (Austria). 9 Jan 1992. 3p. Order Number DE92615181. Source: OSTI; NTIS (US Sales Only); INIS.

Hard copies are available in English and Russian from IAEA Division of Publications, Distribution Unit.

On 26 December 1991 the Director General received a Note from the Ministry of Foreign Affairs of The Russian Federation informing him that The Russian Federation continues the membership of the Union of Soviet Socialist Republics in the IAEA. The full text of this Note is reproduced in Attachment 1. On 24 December 1991 the Director General received a Note from the Secretary General of the United Nations transmitting a letter from the President of the Russian Federation concerning membership of The Russian Federation in the United Nations. The full text of this letter is reproduced in Attachment 2.

Corporate Author Index

This index lists the corporate authors responsible for issuing the documents in this publication which are identified primarily by report number. The corporate names are entered in standardized forms as defined in ETDE/PUB--3, *International Energy: Research Organizations 1986–1990*. Each entry under a corporate name includes the document title and citation number. Three items of information may appear in parentheses: (1) an abbreviation to identify the document type, such as a report; (2) the country of publication, also abbreviated; and (3) the language of the document if non-English (R;US;In French). Author affiliations are not listed in this index.

Forschungszentrum Juelich GmbH (Germany). Abt. Sicherheit und Strahlenschutz
Investigations on atmospheric dispersion of air pollutants after short-time releases in complex terrain. Third field experiment on atmospheric dispersion around the isolated hill Sophienhoehe in August/September 1988. Methods - experiments - data bank, 17:7552 (R;DE)

Forschungszentrum Juelich GmbH (Germany). Inst. fuer Angewandte Werkstofforschung
Properties of plasma sprayed oxides on metallic substrates, 17:6982 (R;DE;In German)

Forschungszentrum Juelich GmbH (Germany). Inst. fuer Biotechnologie
Interactive data analysis in biotechnical process data, 17:6501 (R;DE;In German)

Forschungszentrum Juelich GmbH (Germany). Inst. fuer Chemie 5 - Erdoel und Organische Geochemie
Quantitative and qualitative analysis of fossil hydrocarbons and their conversion products in Posidonia shale soils (Ith-Hils trough), 17:6294 (R;DE;In German)

Forschungszentrum Juelich GmbH (Germany). Inst. fuer Chemische Technologie
Investigations for the suitability of photoelectrical aerosol sensors (PAS) as an instrument of the on-line and in-situ monitoring of combustion aerosols containing polycyclic aromatic hydrocarbon (PAH) and nitropolycyclic aromatic hydrocarbon (NPAH), 17:7477 (R;DE;In German)
Studies on dust separation in wet scrubbers by water vapour condensation, 17:7553 (R;DE;In German)
Transparent and conservative models to calculate the safety of radioactive waste repositories, 17:6390 (R;DE;In German)

Forschungszentrum Juelich GmbH (Germany). Inst. fuer Chemische Technologie der Nuklearen Entsorgung
MAW and HTR-FE experimental disposal in boreholes. Study of radiation, corrosion resistance and long-term performance of instruments and electrical components under simulated in situ conditions in salt, 17:6391 (R;DE;In German)

Forschungszentrum Juelich GmbH (Germany). Inst. fuer Festkoerperforschung
New components for the neutron spectrometer SV5c at the 10H channel of the research reactor FRJ2, 17:7444 (R;DE;In German)

Forschungszentrum Juelich GmbH (Germany). Inst. fuer Kernphysik
An induction drift chamber with flash ADC selection, 17:7443 (R;DE;In German)
Compton scattering on hadronic systems, 17:8110 (R;DE;In German)
First turn simulations in the cooler synchrotron COSY, 17:7271 (R;DE)
Hadronic spin excitations in finite fermion systems, 17:8111 (R;DE;In German)
Shape changes in the nucleus ^{180}Os at high angular moments, 17:8038 (R;DE;In German)
The preparation of computer-supported methods for the analysis of radiation situation at particle accelerators and their exemplary application to the cooler synchrotron COSY, 17:8128 (R;DE;In German)
Workshop on mesons and mesonic states up to slightly above 1 GeV/c^2, 17:7993 (R;DE)

Forschungszentrum Juelich GmbH (Germany). Inst. fuer Reaktorwerkstoffe
The influence of the oxygen partial pressure on the quasi-ternary system Cr-Mn-Ti-oxide, 17:6981 (R;DE;In German)

Forschungszentrum Juelich GmbH (Germany). Inst. fuer Sicherheitsforschung und Reaktortechnik
Investigations for the constructive lay-out and design of a prestressed cast-steel pressure vessel for the HTR-module, 17:6592 (R;DE;In German)

Forschungszentrum Juelich GmbH (Germany). Programmgruppe Systemforschung und Technologische Entwicklung
Theoretical investigations on the behaviour of heavy metals in coal-fired power plants, 17:6247 (R;DE;In German)

Forschungszentrum Juelich GmbH (Germany). Programmgruppe Technologiefolgenforschung
The verification of international conventions on protection of the environment and common resources. A comparative analysis of the instruments and procedures for international verification with the example of thirteen conventions, 17:6787 (R;DE)

Forschungszentrum Juelich GmbH (Germany). Zentralabteilung fuer Chemische Analysen
Radon therapy in the Soviet Union. Report on the visit to the National Research Center for Medical Rehabilitation and Physical Therapy in Moscow, September 18-20, 1990, 17:7676 (R;DE;In German)

Fraunhofer-Institut fuer Physikalische Messtechnik (IPM), Freiburg im Breisgau (Germany)
Annealing of radiation damages in extrinsic semiconductor detectors with lead chalkogenide diode lasers. Final report, 17:7474 (I;DE;In German)

Fraunhofer-Institut fuer Werkstoffmechanik, Freiburg im Breisgau (Germany)
A new approach to intensity and background corrections for roentgenographic residual stress measurement using the ω-diffractometer, 17:7190 (R;DE;In German)

Fundacao de Tecnologia Industrial (FTI), Lorena, SP (Brazil)
Radiography with neutrons: use in inspection of hydrogenated materials, 17:7193 (I;BR;In Portuguese)

Investigations on the creep-rupture behaviour of the austenitic stainless steel AISI 316 NET. Final report, 17:6936 (R;DE;In German)

Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Meteorologie und Klimaforschung
Estimation of the temperature structure parameter and the sensible heat flux from SODAR measurements, 17:7585 (R;DE)
KfK, Institute of Meteorology and Climate Research. Status report on research and development activities in 1990, 17:7554 (R;DE;In German)

Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Neutronenphysik und Reaktortechnik
Results of research and development activities in 1989 of the Institute for Neutron Physics and Reactor Technology, 17:6798 (R;DE;In German)

Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Nukleare Entsorgungstechnik
Radiation resistant, decontaminable and sealing jointing compounds for application in nuclear facilities, 17:7012 (R;DE)

Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Nukleare Festkoerperphysik
Superconductivity in the homogeneous electron gas: Exchange and correlation effects, 17:8203 (R;DE;In German)

Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Radiochemie
Raman spectroscopic investigation of the formation of $Mg(HCO_3)_2$ used for column regeneration in the MARIX process, 17:7089 (R;DE;In German)

Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Reaktorbauelemente
KfK, Institute for Reactor Components. Results of research and development activities in 1989, 17:6604 (R;DE;In German)

Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Reaktorentwicklung (IRE)
Experiments on thermal interactions: Tests with Al_2O_3 droplets and water, 17:6740 (R;DE)
KfK, Institute for Reactor Development. Results of research and development activities in 1990, 17:6573 (R;DE;In German)

Kernforschungszentrum Karlsruhe GmbH (Germany). Lab. fuer Aerosolphysik und Filtertechnik (LAF)
On the propagation of weak shock waves in air cleaning systems, 17:7183 (R;DE;In German)

Kernforschungszentrum Karlsruhe GmbH (Germany). Lab. fuer Isotopentechnik
Experiments towards the stationary and dynamical behavior of the combustion at the incineration research plant TAMARA, 17:6870 (R;DE;In German)

Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Nukleare Sicherheitsforschung
Aerosol behaviour under core meltdown accident conditions, 17:6730 (RA;DE;In German)
Behaviour of a core melt in the LWR containment, 17:6731 (RA;DE;In German)
Challenges within ventilation systems during accident situations, 17:7158 (RA;DE;In German)
Core meltdown experiments BETA, 17:6736 (RA;DE;In German)
Development of calculational procedures for the neutron physics design of an APWR equilibrium core, 17:6632 (RA;DE;In German)

Development of methods for assessing and reducing the radiological consequences of nuclear accidents, 17:6737 (RA;DE;In German)
Experiments on thermal interactions: Tests with Al_2O_3 droplets and water, 17:6740 (R;DE)
HEPA filter response to accident conditions, 17:7157 (RA;DE;In German)
Investigation of phase transport mechanisms in air-water bubbly flow in vertical channels, 17:7182 (RA;DE;In German)
Investigations in freon on critical heat flux (KRISTA-program), 17:6584 (RA;DE;In German)
Investigations into the occurrence of penetrating iodine species. Pt. 2, 17:7130 (RA;DE;In German)
Investigations of the reflooding behaviour in tight lattice rod bundles in the frame of the FLORESTAN-program, 17:6738 (RA;DE;In German)
Long term coolability of a core melt, 17:6739 (RA;DE;In German)
Measurement of gas components in CORA-experiments, 17:6729 (RA;DE;In German)
Measurement of gas components in BETA-experiments, 17:6732 (RA;DE;In German)
Measurements of turbulent velocity and temperature in a central channel of a heated rod bundle, 17:6583 (RA;DE)
Mechanical and chemical behaviour of LWR fuel rod bundles at high temperatures, 17:6734 (RA;DE;In German)
On the analysis of LWHCR experiments performed in PROTEUS, 17:6633 (RA;DE;In German)
On the propagation of weak shock waves in air cleaning systems, 17:7183 (R;DE;In German)
Out-of-pile bundle experiments for the investigation of severe fuel damage (CORA program): Tests CORA-7 and CORA-18 (large bundles), 17:6733 (RA;DE;In German)
Post-test examination and evaluation of the CORA experiments, 17:6735 (RA;DE;In German)
Safety oriented LWR research. Annual report 1990, 17:6728 (R;DE;In German)
Venting filter for LWR, 17:7156 (RA;DE;In German)
Zircaloy oxidation and cladding deformation in PWR-specific CORA experiments, 17:6727 (R;DE)

Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Schadstoffbeherrschung in der Umwelt (PSU)
Raman spectroscopic investigation of the formation of $Mg(HCO_3)_2$ used for column regeneration in the MARIX process, 17:7089 (R;DE;In German)

Knolls Atomic Power Lab., Schenectady, NY (United States)
A variable timestep generalized Runge-Kutta method for the numerical integration of the space-time diffusion equations, 17:8129 (R;US)
Conduit grinding apparatus, 17:7161 (PA;US)

Koeln Univ. (Germany)
Quantitative and qualitative analysis of fossil hydrocarbons and their conversion products in Posidonia shale soils (Ith-Hils trough), 17:6294 (R;DE;In German)

Korea Atomic Energy Research Inst., Daeduk (Korea, Republic of)
A safety study on spent fuel management: A study on the fluid-structure interaction modeling of spent fuel storage pool, 17:6363 (R;KR;In Korean)
A study on KMRR utilization for fuel development, 17:6693 (R;KR;In Korean)
A study on nuclear materials by neutron scattering, 17:6934 (R;KR;In Korean)
A study on the development of high Tc superconducting materials, 17:8202 (R;KR;In Korean)
A study on the human factors of nuclear power plants man-machine interface, 17:6657 (R;KR;In Korean)
A study on the laser welding of aluminium for end-capping of KMRR fuel elements, 17:6648 (R;KR;In Korean)
A study on the nuclear computer codes installation and management system, 17:8405 (R;KR;In Korean)
A study on the nuclear computer code maintenance and management system, 17:8406 (R;KR;In Korean)
A study on the removal of dissolved oxygen from the secondary water in nuclear power plants, 17:6642 (R;KR;In Korean)
A study on the separation characteristics of tritiated water vapor adsorption, 17:7088 (R;KR;In Korean)
A study on the transportation of corrosion products in the steam generators, 17:6932 (R;KR;In Korean)
Analysis of the irradiation creep and growth of KMRR structural materials of zircaloy-4, 17:7194 (R;KR;In Korean)
Application of irradiation techniques to food and foodstuffs, 17:7734 (R;KR;In Korean)
Basic chemistry for radioactive waste management: Development of chemical methods on geological material analysis, 17:7053 (R;KR;In Korean)
Basic chemistry for radioactive waste management: Studies on the chemical behaviors of radioactive elements, 17:7141 (R;KR;In Korean)
Basic chemistry for radioactive waste management: Study on the corrosion of materials for radwaste containment, 17:6931 (R;KR;In Korean)
Decontamination and restoration technology development, 17:6647 (R;KR;In Korean)
Development of a computer code concerning the diffusion of radioactive effluents and radiological exposure following an accident, 17:6726 (R;KR;In Korean)
Development of post-irradiation examination and evaluation techniques for nuclear reactor fuel, 17:6649 (R;KR;In Korean)
Economic analysis of nuclear power generation, 17:6625 (R;KR;In Korean)
Environmental isotope aided studies on water resources in the region of Cheju (VII), 17:7623 (R;KR;In Korean)
Establishment of nuclear business management system, 17:6794 (R;KR;In Korean)
Evaluation of structural behavior, geological and hydrogeological characteristics: Joint roughness characteristics and shear strength, 17:6392 (R;KR;In Korean)
Evaluation of structural behavior, geological and hydrogeological characteristics: A dynamic behavior study of rock caverns considering the effects of discontinuities, 17:7584 (R;KR;In Korean)
Fluid flow test for KMRR fuel assemblies, 17:6692 (R;KR;In Korean)
Improvement of analysis system for core thermal hydraulic field and CHF, 17:7181 (R;KR;In Korean)
Microbial treatment of aqueous wastes, 17:6395 (R;KR;In Korean)
Optimization of dynamic terms in core overtemperature delta-T trip function, 17:6658 (R;KR)
Quality assurance for the research and development of nuclear technology, 17:8388 (R;KR;In Korean)
Research on the optical applications in nuclear industry, 17:6486 (R;KR;In Korean)
Studies on heat shrinkage PVC tubes, 17:7129 (R;KR;In Korean)
Studies on the causes of failures in titanium tube condensers of nuclear power plants, 17:6933 (R;KR;In Korean)
Studies on the establishment of nuclear safety policy, 17:6472 (R;KR;In Korean)
Studies on the improvement of irradiation process, 17:6495 (R;KR;In Korean)
Study on industrial application of radiotracer: Measurement of mixing rates of powdered raw materials, 17:6496 (R;KR;In Korean)
Study on the computerization of PWR secondary side chemistry monitoring, 17:6582 (R;KR;In Korean)
The development of NPP operational safety training courses, 17:7774 (R;KR;In Korean)
The development of radioactive waste treatment technology (III): Development of radioactive liquid waste treatment technology (II), 17:7087 (R;KR;In Korean)
The development of radioactive waste treatment technology (III): A study on the hot off-gas treatment process, 17:6393 (R;KR;In Korean)
The development of radioactive waste treatment technology (III): The development of solidification technology, 17:6394 (R;KR;In Korean)
The development of SiC whisker fabrication technology for nuclear applications, 17:6983 (R;KR;In Korean)
The development status and survey of the technical data for nuclear district heating reactors, 17:6626 (R;KR;In Korean)

The thermal-hydraulic characteristics of the nuclear reactor core during accident -an investigation on thermal mixing with direct vessel injection(II)-, 17:6641 (R;KR;In Korean)
Triga mark-II,III reactor safety re-evaluation, 17:6694 (R;KR;In Korean)

Korean Standard Research Inst., Seoul (Korea, Republic of)
A study on the development of high T_c superconducting materials and on the effects of neutron irradiation, 17:8201 (R;KR;In Korean)

Kyoto Univ., Kumatori, Osaka (Japan). Research Reactor Inst.
Amount of forming neutrons by light and heavy ion reaction and permeation of produced neutrons through substances, 17:8132 (RA;JP;In Japanese)
Calculation method for nuclear fission neutron spectra, 17:8131 (RA;JP;In Japanese)
Development of high performance neutron source using spallation: Neutron experiment facilities in the Japanese Hadron Project, 17:7356 (RA;JP;In Japanese)

From nuclides to nerve gas: The development of the Chemical Stockpile Emergency Preparedness Exercise Program, 17:7540 (R;US)

Functional requirements for Waste Area Grouping 6 Monitoring Station 3 upgrade, 17:7627 (R;US)

GRAIL: An integrated artificial intelligence system for gene recognition and interpretation, 17:7636 (R;US)

GRESS Version 2.0 user's manual, 17:8414 (R;US)

High temperature tensile and fatigue strengths of Si_3N_4, 17:6967 (R;US)

Information survey for microcomputer systems integration, 17:8413 (R;US)

Instrumentation and Controls Division progress report for the period July 1, 1988 to June 30, 1990: Volume 2, 17:7387 (R;US)

Integrated Data Base for 1991: US spent fuel and radioactive waste inventories, projections, and characteristics: Revision 7, 17:6366 (R;US)

Licensee Event Report (LER) compilation for the month of October 1991: Volume 10, No.10, 17:6623 (R;US)

Low-level liquid waste decontamination by ion exchange, 17:6415 (R;US)

Marketable permits for controlling sulphur dioxide emissions, 17:6289 (R;US)

MHD-EMP interaction with power transmission and distribution systems, 17:6761 (R;US)

Microwave sintered silicon nitride ceramics, 17:6966 (R;US)

Modeled performance of non-chlorinated substitutes for CFC-11 and CFC-12 in centrifugal chillers, 17:6853 (R;US)

Monitoring and modeling contaminated sediment transport in the White Oak Creek watershed: Environmental Restoration Program, 17:8409 (R;US)

Monitoring nuclear reactor systems using neural networks and fuzzy logic, 17:6652 (R;US)

MORECA: A computer code for simulating modular high-temperature gas-cooled reactor core heatup accidents, 17:6747 (R;US)

NA-NET numerical analysis net, 17:8416 (R;US)

Navy mobility fuels forecasting system report: World petroleum trade forecasts for the year 2000, 17:6822 (R;US)

Navy Mobility Fuels Forecasting System report: Navy fuel production in the year 2000, 17:7517 (R;US)

NRC data base for power reactor surveillance programs and for irradiation experiments results, 17:6639 (R;US)

Numerical implementation of the Dirac equation on hypercube multicomputers, 17:7903 (R;US)

Oak Ridge National Laboratory's philosophy and approach to NEPA, 17:6779 (R;US)

ORNL '90, 17:6795 (R;US)

Overview of CFC replacement issues for household refrigeration, 17:6840 (R;US)

PCB annual report for Oak Ridge National Laboratory EPA Identification Number - TN 1890090003, February 6, 1990–December 31, 1990, 17:7587 (R;US)

Performance assessment of low-level radioactive waste disposal at Oak Ridge National Laboratory, 17:6373 (R;US)

Poly-Si etching using an electron cyclotron resonance microwave plasma sources with multipole confinement, 17:6899 (R;US)

Preliminary site characterization summary and engineering evaluation/cost analysis for Site 2, New Fuel Farm, Naval Air Station Fallon, Fallon, Nevada, 17:7628 (R;US)

Progress in research on aging of structures, 17:6707 (R;US)

Project summary: Physical chemistry of geothermal systems, 17:7066 (R;US)

Reaction of uranium oxides with chlorine and carbon or carbon monoxide to prepare uranium chlorides, 17:6327 (R;US)
Recombination of highly charged ions with free electrons, 17:8153 (R;US)
Recycling and resource recovery at Oak Ridge National Laboratory, 17:6374 (R;US)
Reduction to condensed form for the eigenvalue problem on distributed memory architectures, 17:8418 (R;US)
Regulated bioluminescence as a tool for bioremediation process monitoring and control of bacterial cultures, 17:7680 (R;US)
Review of recent ORNL specific-plant analyses, 17:6709 (R;US)
SAS1 and SAS4, two new shielding analysis sequences for spent fuel casks, 17:7148 (R;US)
Steady-state creep of hot-pressed silicon carbide whisker-reinforced silicon nitride, 17:6970 (R;US)
Successful Army National Guard units: A guard perspective, 17:7518 (R;US)
Summary of the landfill remediation problems and technology needs of the Oak Ridge Reservation Environmental Restoration Programs, 17:6458 (R;US)
Supercritical fluid extraction and organic solvent microextraction of chemical agent simulants from soil, 17:7571 (R;US)
Suppression and shifting of odd-photon resonant excitations and stimulated hyper-Raman emissions, 17:8151 (R;US)
Survey of data compression techniques, 17:8410 (R;US)
Survey of domestic research on superconducting magnetic energy storage, 17:6766 (R;US)
SWSA 6 interim corrective measures environmental monitoring: FY 1990 results: Environmental Restoration Program, 17:6411 (R;US)
Technoeconomic evaluation of the extractive fermentation of butanol as a guide to research in this area of biotechnology, 17:6505 (R;US)
Text encoding for retrieving scientific and technical information, 17:8439 (R;US)
The application of computer-based testing to allow testing out in retraining subjects, 17:8383 (R;US)
The effect of neutron irradiation on the structure and properties of carbon-carbon composite materials, 17:8326 (R;US)
The effects of nonstandard lightning voltage waveshapes on the impulse strength of air gaps, 17:6764 (R;US)
The effects of utility DSM programs on electricity costs and prices, 17:6824 (R;US)
The Pulsed Interrogation Neutron and Gamma (PING) inspection system, 17:7407 (R;US)
Ultra-high temperature (>2000°C) testing capability at Oak Ridge National Laboratory for carbon materials in air, inert gas and vacuum, 17:6995 (R;US)
Uranium hexafluoride handling: Proceedings, 17:6362 (R;US)
Use of electromagnetic borehole flowmeter to delineate groundwater producing fractures, 17:7570 (R;US)
Use of energetic ion beams in materials synthesis and processing, 17:6993 (R;US)
Variance reduction applied to urban network traffic simulation, 17:6847 (R;US)
Wedge assembly for electrical transformer component spacing, 17:6762 (PA;US)
Work plan, health and safety plan, and quality assurance project plan for hazardous waste removal at the CTF K-1654B underground collection tank, 17:6790 (R;US)
Worldwide advanced nuclear power reactors with passive and inherent safety: What, why, how, and who, 17:6751 (R;US)

Oak Ridge National Lab., TN (United States). Applied Technology Div.
Development of performance models for thick composites in compression, 17:7018 (R;US)
Fiberglass material specification III, 17:7019 (R;US)

Oak Ridge National Lab., TN (United States). Carbon Dioxide Information Analysis Center
An updated global grid point surface air temperature anomaly data set: 1851–1990, 17:7556 (R;US)

Oak Ridge National Lab., TN (United States). Health and Safety Research Div.
Results of the Radiological Survey at Conviber, Inc., 644 Garfield Street, Springdale, Pennsylvania (CVP001), 17:6463 (R;US)

Oak Ridge National Lab., TN (United States). Nuclear Operations Analysis Center
Licensee Event Report (LER) compilation for month of September 1991, 17:6622 (R;US)

Oak Ridge Y-12 Plant, TN (United States)
Revised RCRA Closure Plan for the Interim Drum Yard (S-030) at the Oak Ridge Y-12 Plant, Oak Ridge, Tennessee: Revision of Y/TS-347/1R3, 17:6468 (R;US)

Oakland Univ., Rochester, MI (United States)
Mechanisms for radiation damage in DNA: Progress report, June 1, 1991–May 31, 1992, 17:7102 (R;US)
Mechanisms for radiation damage in DNA: Comprehensive report, June 1, 1986–May 31, 1992, 17:7103 (R;US)

Oklahoma State Univ., Stillwater, OK (United States). School of Chemical Engineering
Phase behavior of coal fluids: Data for correlation development: Report period: August 15, 1989–October 15, 1989, 17:6190 (R;US)
Phase behavior of coal fluids: Data for correlation development: Report for the period October 15, 1989–January 15, 1990, 17:6192 (R;US)
Phase equilibrium data for development of correlations for coal fluids: Final report, 15 September 1986–15 September 1990, 17:6191 (R;US)

Oklahoma Univ., Norman, OK (United States)
Microbial enhancement of oil production from carbonate reservoirs: Final report, January 1990–May 1991, 17:6296 (R;US)
Microbial field pilot study: [Quarterly report], July 1, 1992–September 30, 1992, 17:6297 (R;US)

Oregon Dept. of Fish and Wildlife, Portland, OR (United States)
Habitat requirements for spawning and rearing of white sturgeon and quantify the extent of habitat available in the Columbia River between Bonneville and McNary dams, 17:6511 (RA;US)
Habitat requirements for spawning and rearing of white sturgeon and quantification of extent rearing of habitat available in the Columbia River downstream from Bonneville Dam, 17:6512 (RA;US)
Life history and population dynamics of subadult and adult white sturgeon in the Columbia River between Bonneville and McNary dams, 17:6509 (RA;US)
Reproduction and early life history characteristics of white sturgeon populations in Columbia River downstream from Bonneville Dam, 17:6510 (RA;US)

Oregon Graduate Inst. of Science and Technology, Beaverton, OR (United States)
Deformation induced microstructural and microchemical changes during thermomechanical treatment: FY90 Annual progress report, Ocotber 1, 1989–September 30, 1990, 17:6911 (R;US)
Deformation induced microstructural and microchemical changes during thermomechanical treatment: FY 91 quarterly annual progress report, April 1, 1991–June 30, 1991, 17:6912 (R;US)
Deformation induced microstructural and microchemical changes during thermomechanical treatment: Quarterly progress report, October 1, 1990–December 31, 1990, 17:6913 (R;US)
Deformation induced microstructural and microchemical changes during thermomechanical treatment: Quarterly progress report, January 1, 1991–March 31, 1991, 17:6914 (R;US)

Oregon Graduate Inst. of Science and Technology, Beaverton, OR (United States). Dept. of Environmental Science and Engineering
Adsorption of chromate/organic-acid mixtures in aquifer materials: Technical progress report, 1 July 1990–30 June 1991, 17:7573 (R;US)

Oregon State Univ., Corvallis, OR (United States)
[Studies of target fragmentation in intermediate energy, relativistic and ultra-relativistic nuclear collisions]: Nuclear chemistry progress report, August 1, 1990–August 1, 1991, 17:7133 (R;US)

Survey of metal finishing capabilities in the Nuclear Weapons Complex, 17:7532 (R;US)

Sandia National Labs., Albuquerque, NM (United States)
18 W/m^2 Mockup for Defense High-Level Waste (Rooms A): In situ data report: Volume 1—Mechanical response gages (February 1985–June 1990): Waste Isolation Pilot Plant (WIPP) Thermal/Structural Interactions Program, 17:6429 (R;US)
A backscattering spectrometry device for identifying unknown elements present in a workpiece, 17:7056 (PA;US)
A comparison of Whipple shield hypervelocity impact tests to penetration predictors, 17:6947 (R;US)
A fission fragment reactor concept for nuclear thermal propulsion, 17:6698 (R;US)
Accelerated testing of batteries, 17:6768 (R;US)
Adiabatic equilibrium models for direct containment heating, 17:6757 (R;US)
Aging, condition monitoring, and loss-of-coolant accident (LOCA) tests of Class 1E electrical cables: Summary of results, 17:6754 (R;US)
Alloy design options for improvement of the thermomechanical fatigue life of solder joints, 17:6948 (R;US)
Ammonia-treated phosphate glasses useful for sealing to metals, 17:7022 (PA;US)
An approach for assessing ALWR passive safety system reliability, 17:6755 (R;US)
An evaluation of flowmeters for the detection of kicks and lost circulation during drilling, 17:6544 (R;US)
An evaluation of the seismicity of the Nevada Test Site and vicinity: Yucca Mountain Site Characterization Project, 17:7595 (R;US)
An investigation of gouge initiation in high-velocity sliding contact, 17:6945 (R;US)
Analysis of ultrasonic tinning, 17:6950 (R;US)
Areal power density: A preliminary examination of underground heat transfer in a potential Yucca Mountain repository and recommendations for thermal design approaches: Yucca Mountain Site Characterization Project, 17:6426 (R;US)
Barriers to commercialization of large-scale solar electricity: Lessons learned from the LUZ experience, 17:6519 (R;US)
Bonding of hydrogen implanted at 80K into III-IV semiconductors, 17:7026 (R;US)
Calculation of experiment uncertainty in laboratory determination of several geoengineering properties of tuffs from Yucca Mountain, Nevada: Yucca Mountain Site Characterization Project, 17:6423 (R;US)
Certification testing of the Los Alamos National Laboratory Heat Source/Radioisotopic Thermoelectric Generator shipping container, 17:7171 (R;US)
Changes in rock salt permeability due to nearby excavation, 17:6430 (R;US)
Characteristics, finite element analysis, test description, and preliminary test results of the STM4-120 kinematic Stirling engine, 17:6533 (R;US)
Collisional energy deposition threshold for extended damage depths in ion-implanted silicates, 17:7027 (R;US)
Combined VISAR and flash x-ray testing techniques, 17:7515 (R;US)
Deposition of deuterium and metals on divertor tiles in the DIII-D tokamak, 17:8373 (R;US)
Destruction of organic wastes with molten oxidizers, 17:6866 (PA;US)
Determination of deuterium gas pressure in plastic targets by Nuclear Magnetic Resonance, 17:8374 (R;US)
Development of a high-accuracy motion compensation, pointing, and stabilization system for a synthetic aperture radar, 17:7514 (R;US)
Development report on the DT1115 development tester for the MC4073 SRAM II Programmer, 17:7533 (R;US)
Documentation and verification of the SHAFT code: Yucca Mountain Site Characterization Project, 17:6424 (R;US)
Documentation and verification of STRES3D, Version 4.0: Yucca Mountain Site Characterization Project, 17:6427 (R;US)
Downhole hydraulic seismic generator, 17:7476 (PA;US)
Drift design methodology and preliminary application for the Yucca Mountain Site Characterization Project: Yucca Mountain Site Characterization Project, 17:6425 (R;US)
Dynamic material properties of refractory materials: Molybdenum, 17:6944 (R;US)
Experiments to investigate the effect of flight path on direct containment heating (DCH) in the Surtsey test facility: The Limited Flight Path (LFP) tests, 17:6748 (R;US)
Explosive vapor emission, 17:7526 (R;US)
Export control and licensing at Sandia National Laboratories, 17:6804 (R;US)
Facet development for a faceted stretched-membrane dish by SAIC, 17:6540 (R;US)
Fiberline stronglink: Design and implementation, 17:7531 (R;US)
Fission product release and fuel behavior of irradiated light water reactor fuel under severe accident conditions: The ACRR ST-1 Experiment, 17:6666 (R;US)
Fluxless laser soldering for electronic packaging, 17:6949 (R;US)
Ge surface displacements due to low energy particles, 17:7025 (R;US)
High voltage bipolar-CMOS structure using porous silicon, 17:7213 (PA;US)
Initial performance assessment of the Westinghouse AP600 containment design and related safety issues, 17:6758 (R;US)
Interior intrusion detection systems, 17:6477 (R;US)
Lubrication of fretting joints, 17:6892 (R;US)
Method and apparatus for acoustic plate mode liquid-solid phase transition detection, 17:7512 (PA;US)
Modeling mineral dissolution and precipitation in dual-porosity systems, 17:7596 (R;US)
Modelling and fabrication of high-efficiency silicon solar cells, 17:6531 (R;US)
Nuclear reactor pressure vessel flaw distribution development: Phase 2, Methodology and application, 17:6587 (R;US)
Nuclear Thermal Propulsion test facility requirements and development strategy, 17:6609 (R;US)
Phase mixing of transverse oscillations in the linear and nonlinear regimes for IFR relativistic electron beam propagation, 17:7284 (R;US)

Photovoltaics as a worldwide energy option: A case study in development strategy, 17:6517 (R;US)
Photovoltaics as a worldwide energy source, 17:6518 (R;US)
PHYSLIB: A C++ tensor class library, 17:8421 (R;US)
Polarimetric calibration of a coherent measurement radar, 17:7862 (R;US)
Precision wire feeder for small diameter wire, 17:7162 (PA;US)
Preliminary comparison with 40 CFR Part 191, Subpart B for the Waste Isolation Pilot Plant, December 1991: Volume 1: Methodology and results, 17:6431 (R;US)
Preliminary comparison with 40 CFR Part 191, Subpart B for the Waste Isolation Pilot Plant: Volume 2: Probability and consequence modeling, 17:6432 (R;US)
Preliminary comparison with 40 CFR Part 191, Subpart B for the Waste Isolation Pilot Plant, December 1991: Volume 3: Reference data, 17:6433 (R;US)
Process development for high-efficiency silicon solar cells, 17:6530 (R;US)
Radar-cross-section measurement errors caused by test object interaction with low-dielectric-constant supports, 17:7519 (R;US)
Radial dependence of silicon KVV and L_{23}VV Auger matrix elements, 17:7094 (R;US)
Radiation compensated optically-triggered GaAs and Si thyristor switches, 17:7475 (R;US)
Reliability and safety analyses of the Small Projected Line Charge, 17:7525 (R;US)
Research program to develop and validate conceptual models for flow and transport through unsaturated, fractured rock: Yucca Mountain Site Characterization Project, 17:6428 (R;US)
Retrieval strategy report for a potential high-level nuclear waste repository: Yucca Mountain Site Characterizadtion Project, 17:6422 (R;US)
SANET 1.0 User's Guide and Reference Manual, 17:8422 (R;US)
Segmentation of x-ray images using Probabilistic Relaxation Labeling, 17:7467 (R;US)
Selective deposition of copper on poly(tetrafluoroethylene), 17:6946 (R;US)
Simulations of low-energy ion bombardment and epitaxial growth, 17:8195 (R;US)
Solder extrusion pressure bonding process and bonded products produced thereby, 17:6939 (PA;US)
Static load testing of a heliostat drive, 17:6534 (R;US)
Status of the low power and shutdown accident sequence analysis project for the Grand Gulf Nuclear Power Station, 17:6756 (R;US)
Structure and topology of silica aerogels, 17:7029 (R;US)
Syntheses and properties of κ-phase organic superconductors, 17:7030 (R;US)
The Alaska Energy Authority PV-Diesel hybrid assessment and design program, 17:6532 (R;US)
The Integral Effects Test (IET-1) in the Surtsey Test Facility, 17:6759 (R;US)
The status of the US VAWT program, 17:6550 (R;US)
The use of electrophoretically deposited diamond powder coatings as a precursor for chemically vapor deposited diamond, 17:7028 (R;US)
The use of expert elicitation to quantify uncertainty in incomplete sorption data bases for Waste Isolation Pilot Plant performance assessment, 17:6435 (R;US)
The use of modal analysis in the development of advanced lithography machines, 17:7218 (R;US)
Transportation environments of the AL-SX (H1616), 17:7172 (R;US)
Treatment of uncertainty in low-level waste performance assessment, 17:6434 (R;US)
Triaxial thermopile array geo-heat-flow sensor, 17:7480 (PA;US)
Utility Battery Exploratory Technology Development Program report for FY91, 17:6769 (R;US)
Wavenumber-domain SAR focusing from a nonuniform synthetic aperture, 17:8420 (R;US)
Wettability analysis of tin-based, lead free solders, 17:6951 (R;US)
WIPP small scale seal performance tests: Status and impacts, 17:6436 (R;US)

Sandia National Labs., Livermore, CA (United States)
Infrared degenerate four-wave mixing as a diagnostic, 17:7059 (R;US)
Method of making semiconductor junctions, 17:6528 (PA;US)

Sao Paulo Univ., Piracicaba, SP (Brazil). Escola Superior de Agricultura Luiz de Queiroz
Effects of irradiated diet on longevity and prolificity of successive generations of Zabrotes subfasciatus (Boheman, 1833) (Coleoptera, Bruchidae), 17:7699 (I;BR;In Portuguese)
Gamma radiation effects in Sitophilus oryzae (Linne, 1763) (Coleoptera, Curculionidae), 17:7700 (I;BR;In Portuguese)
Some effects of gamma radiation in Callosobruchus maculatus (Fabr., 1792) (Coleoptera, Bruchidae), 17:7696 (I;BR;In Portuguese)
The influence of gamma radiation rate over the radiosensitivity of five class of insects, 17:7698 (I;BR;In Portuguese)

Sao Paulo Univ., SP (Brazil). Inst. de Fisica
Probe code: a set of programs for processing and analysis of the left ventricular function - User's manual, 17:8400 (I;BR;In Portuguese)

Schafer (W.J.) Associates, Inc., Albuquerque, NM (United States)
Correlator optical wavefront sensor "COWS," Task 6: Final report, 17:7495 (R;US)

Science Applications International Corp., McLean, VA (United States). Foreign Applied Sciences Assessment Center
West European nuclear power generation research and development, 17:6627 (R;US)

Science Applications International Corp., San Diego, CA (United States). Energy Projects Div.
Facet development for a faceted stretched-membrane dish by SAIC, 17:6540 (R;US)

Scripps Institution of Oceanography, La Jolla, CA (United States)
[Studies of non-linear dynamics of dissipative systems]: [Final report, April 1, 1988–October 31, 1989], 17:7820 (R;US)

Sheffield Univ. (United Kingdom)
Petri nets and fault diagnosis in nuclear reactors, 17:6579 (I;GB)
The application of neural networks for fault diagnosis in nuclear reactors, 17:6580 (I;GB)
The use of an object oriented technique for fault diagnosis in nuclear reactors, 17:6578 (I;GB)

Siemens AG Unternehmensbereich KWU, Erlangen (Germany)
Development of high temperature fuel cells - project preparation phase. Final report, 17:6838 (I;DE;In German)

Sociedade Brasileira de Matematica Aplicada e Computacional, Rio de Janeiro, RJ (Brazil)
A neutron diffusion model for a fluidized bed nuclear reactor, 17:6631 (I;BR;In Portuguese)
An iterative computer graphics system to simulate the three dimension tumor growth, 17:8401 (I;BR;In Portuguese)

Sociedade Brasileira de Microscopia Eletronica, Rio de Janeiro, RJ (Brazil)
Γ-precipitation for inconel 718, 17:6920 (I;BR;In Portuguese)

Sociedade Entomologica do Brasil, Porto Alegre, RS (Brazil)
Collect sphere study of africanized bees, Apis mellifera L. 1758 (Hymenoptera: Apidae), in apple orchard, cv. Anna, 17:7707 (IA;BR;In Portuguese)
Cytological characterization and survival of Metarhizium anisopliae (Metsch.) Sorokin, in sugar cane leaf, 17:7763 (IA;BR;In Portuguese)
Disinfestation of Averrhoa carambola infested by Anastrepha obliqua (Mac., 1831) (Diptera, Tephritidae) by gamma radiation, 17:7718 (IA;BR;In Portuguese)
Dispersion aspects of Mediterranean fruit fly, Ceratitis capitata (Wied., 1824) (Diptera: Tephritidae) labelled with 32P in citrus, on the presence and absent of mature fruits, 17:7711 (IA;BR;In Portuguese)
DL sub(50) and DL sub(99,9968) determination of gamma radiation over larvas and eggs of Ceratitis capitata (Wied., 1824) in papaya (Carica papaya L.), 17:7714 (IA;BR;In Portuguese)
Eggs irradiation of Ceratitis capitata (Wied., 1824) in vitro and in mangoes fruits (Mangifera indica L.), 17:7715 (IA;BR;In Portuguese)
Fractionation effect of gamma radiation dose from cobalt-60 about the longevity and reproduction of Sitophilus zeamais MOTS., 1855 (Col. Curculionidae) in maize, 17:7703 (IA;BR;In Portuguese)

Fractionation effect of gamma radiation dose from cobalt-60 about the longevity and reproduction of Sitophilus oryzae (L., 1763) (Col. Curculionidae) in maize, 17:7704 (IA;BR;In Portuguese)
Gamma radiation effects over pupae of several ages from Anastrepha fraterculus (Wied., 1830) (Diptera: Tephritidae), 17:7713 (IA;BR;In Portuguese)
Gamma radiation use in mangoes disinfestation for exporting in relation of Ceratitis capitata, Anastrepha fraterculus and Anastrepha obliqua larvas, 17:7716 (IA;BR;In Portuguese)
Haden mangoes disinfestation infested by Anastrepha fraterculus (Wied., 1830) (Dip. Tephritidae), by gamma radiation, 17:7717 (IA;BR;In Portuguese)
Influence of gamma radiation from cobalt-60 in pupa of Musca domestica L., 1758 (Diptera: Muscidae), 17:7708 (IA;BR;In Portuguese)
Influence of gamma radiation from cobalt-60 on eggs viability of Anagasta kuehniella (Zeller, 1879), 17:7709 (IA;BR;In Portuguese)
Influence of gamma radiation from cobalt 60 in Doryctobracon areolatus (Szipligeti, 1911) (Hymenoptera, braconidae) parasiting pupae of Anastrepha obliqua (Mac., 1835) (Diptera, tephritidae), 17:7712 (IA;BR;In Portuguese)
Parthenogenetic reproduction in Aleurodicus cocois anacardii (Homoptera, Aleyrodidae), 17:7705 (IA;BR;In Portuguese)
Persistence in soil of savage lineage and mutants from Beauveria bassiana (BALS.)Vuill., and it pathogenesis over caterpillar of Diatraea saccharalis (F., 1794), 17:7762 (IA;BR;In Portuguese)
Proceedings of the 13. Brazilian Congress on Entomology; 1. International Symposium of Bicudo from Cotton-plant; 2. Meeting of Cochineal Insect from Fodder Palm; 3. Meeting of Fruit Flies - v.1, 17:7702 (I;BR;In Portuguese)
Proceedings of the 13. Brazilian Congress on Entomology; 1. International Symposium of Bicudo from Cotton-plant; 2. Meeting of Cochineal Insect from Fodder Palm; 3. Meeting of Fruit Flies - v. 2, 17:7710 (I;BR;In Portuguese)
Temperature and relative air humidity in collect activity of africanized bee (Apis mellifera, L.) in apple orchard, 17:7706 (IA;BR;In Portuguese)

Solid State Fuel Cells, Columbia, MD (United States)
Characterization and development of a new ceramic electrolyte for fuel cell applications: Final report, 17:6837 (R;US)

Southeastern Universities Research Association, Newport News, VA (United States). Continuous Electron Beam Accelerator Facility
Few-body experimental program at CEBAF, 17:7967 (R;US)

Southern Co. Services, Inc., Birmingham, AL (United States)
Innovative clean coal technology (ICCT): 500 MW demonstration of advanced wall-fired combustion techniques for the reduction of nitrogen oxide (NO_x) emissions from coal-fired boilers: Phase 1, Baseline tests report, 17:6277 (R;US)

Southern Illinois Univ., Carbondale, IL (United States). Dept. of Geology
Characterization of organic nitrogen in IBCSP coals: Final technical report, September 1, 1990–August 31, 1991, 17:6228 (R;US)

Southern Illinois Univ., Carbondale, IL (United States). Dept. of Mechanical Engineering and Energy Processes
Chemical coal cleaning using selective oxidation: Final technical report, September 1, 1990–August 31, 1991, 17:6183 (R;US)

Southern Research Inst., Birmingham, AL (United States)
Characterization and modification of particulate properties to enhance filtration performance: Quarterly technical progress report, March 1989–May 1989, 17:6567 (R;US)

Southwest Research Inst., San Antonio, TX (United States)
Wear mechanism and wear prevention in coal-fueled diesel engines: Monthly progress report, 27 April 1990–25 May 1990, 17:6876 (R;US)

Sovet Ehkonomicheskoj Vzaimopomoshchi, Moscow (USSR). Postoyannaya Komissiya po Ispol'zovaniyu Atomnoj Ehnergii v Mirnykh Tselyakh
Baltic Sea radioactivity studies within 1981-1985, 17:7622 (I;XM;In Russian)
Dictionnary for radiation safety terminology, 17:7773 (I;XM;In Russian)
Investigations of Baltic See radioactivity within 1976-1980, 17:7620 (I;XM;In Russian)
Summary report on the Danube river radiation environment within 1981-1985, 17:7621 (I;XM;In Russian)
Summary report on the radiation environment of the Danube river within 1977-1980 period, 17:7619 (I;XM;In Russian)

Spire Corp., Bedford, MA (United States)
A superior optical baffle material: Final report, 17:7535 (R;US)

SRI International, Menlo Park, CA (United States)
Exploratory coprocessing research: Quarterly report no. 6, December 1, 1989–February 28, 1990, 17:6166 (R;US)
Exploratory coprocessing research: Final report, September 1988–June 1991, 17:6167 (R;US)

Stanford Linear Accelerator Center, Menlo Park, CA (United States)
An amplitude analysis of the $K\bar{K}$ and $\pi^+\pi^-$ systems ($M < 2$ GeV/c^2) produced in J/ψ radiative decay, 17:7962 (R;US)
GLAD: A Generic LAttice Debugger, 17:7287 (R;US)
High current transistor pulse generator, 17:7365 (R;US)
Large acceptance magnetic spectrometers for polarized deep inelastic electron scattering, 17:7469 (R;US)
Long baseline neutrino experiments with the Fermilab Main Injector, 17:7995 (R;US)
Observation and analysis of oscillations in linear accelerators, 17:7285 (R;US)
Observation and cures of wakefield effects in the SLC Linac, 17:7288 (R;US)
Review of lattice measurement techniques at the SLC, 17:7286 (R;US)
Stanford Linear Collider magnet positioning, 17:7364 (R;US)
The strange 0^{++} and 2^{++} radial excitations: A review of LASS data, 17:7994 (R;US)
The tau-charm factory: Concept and construction, 17:7254 (R;US)

Stanford Univ., CA (United States)
Progress and commissioning of the SLD Cherenkov Ring Imaging Detector: Revision, 17:7468 (R;US)

Stanford Univ., CA (United States). Dept. of Chemical Engineering
Fundamental studies of fluid mechanics and stability in porous media: Progress report, 17:6298 (R;US)

Stanford Univ., CA (United States). Dept. of Materials Science and Engineering
Mechanical properties of materials with nanometer scale microstructures: Progress report, 1 April 1989 to Present, 17:6909 (R;US)

Stanford Univ., CA (United States). School of Earth Sciences
Fluid flow, element migration, and petrotectonic evolution of the early Mesozoic Central Klamath island arc, northwesternmost California: Progress report, September 15, 1990–September 14, 1991, 17:6542 (R;US)

Stansbury (E.E.), Knoxville, TN (United States)
Corrosiveness of wet residential building thermal insulation—Mechanisms and evaluation of electrochemical methods for assessing corrosion behavior, 17:7020 (R;US)

State Univ. of New York, Buffalo, NY (United States)
[Comparison of group transfer, inner shere and outer sphere electron transfer mechanisms for organometallic complexes]: Summary, 17:7071 (R;US)

State Univ. of New York, Stony Brook, NY (United States). Dept. of Chemistry
Capacitance of edge plane of pyrolytic graphite in acetonitrile solutions, 17:7097 (R;US)
Preparation of polymer-modified electrodes: A literature and experimental study, 17:7073 (R;US)

State Univ. of New York, Stony Brook, NY (United States). Dept. of Physics
[Calorimeter based detectors for high energy hadron colliders]: [Progress report], 17:7411 (R;US)

State Univ. of New York, Stony Brook, NY (United States). Research Foundation
Atomic and electronic structure of metals and alloys: Clean surfaces and chemisorbed molecules: Progress report, 17:6906 (R;US)

Stockholm Univ. (Sweden). Inst. of Physics
Exploratory study for a solid-state charged-particle spectrometer inside the celsius ring: $\alpha + {}^1H$ reactions at 1.7 and 2.2 GeV/c, 17:7473 (R;SE)

Stone and Webster Engineering Corp., Denver, CO (United States)
Healy Clean Coal Project: Technical progress report, quarterly report No. 1 & 2 for the period January–June 1991, 17:6246 (R;US)

Stuttgart Univ. (Germany). Inst. fuer Kernenergetik und Energiesysteme
THEXSYST - a knowledge based system for the control and analysis of technical simulation calculations, 17:8397 (R;DE;In German)

Superconducting Super Collider Lab., Dallas, TX (United States)
About the mechanics of SSC dipole magnet prototypes, 17:7369 (R;US)
Beam control feedback loops for the low energy booster, 17:7368 (R;US)
HEPLIB '91: International users meeting on the support and environments of high energy physics computing, 17:7869 (R;US)
Phase-control scheme for synchronous beam transfer from the low energy booster to the medium energy booster, 17:7366 (R;US)
Supercomputing activities at the SSC Laboratory, 17:7367 (R;US)

Sveriges Meteorologiska och Hydrologiska Inst., Norrkoeping (Sweden)
A costal dispersion model, 17:7625 (R;SE;In Swedish)

Swedish National Board for Technical Development, Stockholm (Sweden)
Control of the development of residual stresses and heat affected zone (HAZ) microstructure during welding of low alloy steels and influence on stress relieve cracking, 17:7195 (R;SE)
Crack initiation and propagation in welded joints of turbine and boiler steels during low cycle fatigue, 17:7196 (R;SE)

Swedish Nuclear Fuel and Waste Management Co., Stockholm (Sweden)
A comparison of predictions and measurements for the Stripa simulated drift experiment, 17:7607 (R;SE)
A resistance network model for radionuclide transport into the near field surrounding a repository for nuclear waste (SKB, Near Field Model 91), 17:8427 (R;SE)
Aespoe hard rock laboratory. Evaluation and conceptual modelling based on the pre-investigations 1986-1990, 17:7600 (R;SE)
Chemical and isotopic composition of groundwaters and their seasonal variability at the OSAMU Utsumi mine and Morro do Ferro analogue study sites, Pocos de Caldas, Brazil: Pocos do Caldas Report No. 6, 17:7632 (R;SE)
Geomorphological and hydrogeological features of the Pocos de Caldas caldera and the Osamu Utsumi mine and Morro do Ferro analogue study sites, Brazil: Pocos de Caldas Report No. 5, 17:7597 (R;SE)
Hydrogeological conditions in the Finnsjoen area. Compilation of data and conceptual model, 17:7601 (R;SE)
Inflow measurements on the D-holes at the Stripa mine, 17:7605 (R;SE)
Interim report on the laboratory and theoretical work in modeling the drained and undrained behavior of buffer materials, 17:7095 (R;SE)
Microbiological analysis at the Osamu Utsumi mine and Morro do Ferro analogue study sites, Pocos de Caldas, Brazil: Pcos de Caldas Report No. 10, 17:7598 (R;SE)
Near field studies within the SKB 91 Project, 17:8428 (R;SE)
Near-field high-temperature transport: Evidence from the genesis of the Osamu Utsumi uranium mine, Pocos de Caldas alkaline complex, Brazil: Pocos de Caldas Report No. 13, 17:7599 (R;SE)
NEAR21 - A near field radionuclide migration code for use with the PROPER package, 17:8424 (R;SE)
Numerical inversion of Laplace transforms using integration and convergence acceleration, 17:8423 (R;SE)
Site characterization and validation - monitoring of head in the Stripa mine during 1989, 17:7603 (R;SE)
Site characterization and validation - monitoring of head in the Stripa mine during 1990, 17:7604 (R;SE)
Site characterization and validation - results from seismic crosshole and reflection measurements - Stage 3, 17:7606 (R;SE)
Storage of nuclear waste in long boreholes, 17:6437 (R;SE)
Testing of parameter averaging techniques for far-field migration calculations using FARF31 with varying velocity, 17:8425 (R;SE)
The role of the disturbed rock zone in radioactive waste repository safety and performance assessment. A topical discussion and international overview, 17:7602 (R;SE)
The Stripa project. Annual report 1990, 17:7608 (R;SE)
Tracer transport in fractures: analysis of field data based on a variable - aperture channel model, 17:7609 (R;SE)
Uraninite alteration in an oxidizing environment and its relevance to the disposal of spent nuclear fuel, 17:7096 (R;SE)
Verification of HYDRASTAR - A code for stochastic continuum simulation of groundwater flow, 17:8426 (R;SE)

Swedish State Power Board, Vaellingby (Sweden)
Long-time measurements of prestressed tendon forces in reactor containment, Forsmark nuclear power station, unit 1, 17:6577 (R;SE;In Swedish)
The electric power system in the year 2050, 17:8390 (R;SE;In Swedish)

Swedish Univ. of Agricultural Sciences, Uppsala (Sweden). Dept. of Radioecology
The elk and its forage plants, 17:7787 (R;SE;In Swedish)

Syracuse Univ., NY (United States). Dept. of Chemical Engineering and Materials Science
Mechanisms of gas permeation through polymer membranes: Summary technical report, September 1989–August 1991, 17:7043 (R;US)

T

Technische Hochschule Aachen (Germany)
Investigations for the constructive lay-out and design of a prestressed cast-steel pressure vessel for the HTR-module, 17:6592 (R;DE;In German)
Properties of plasma sprayed oxides on metallic substrates, 17:6982 (R;DE;In German)
Studies on dust separation in wet scrubbers by water vapour condensation, 17:7553 (R;DE;In German)
The influence of the oxygen partial pressure on the quasi-ternary system Cr-Mn-Ti-oxide, 17:6981 (R;DE;In German)

Technische Univ. Braunschweig (Germany). Fakultaet fuer Maschinenbau und Elektrotechnik
Investigations on the influence of strongly increased fuel injection pressure on the performance of a direct-injection diesel engine, 17:6877 (I;DE;In German)

Technische Univ. Braunschweig (Germany). Naturwissenschaftliche Fakultaet
Development of a test system for the inspection of the phytotoxicity of gases, 17:7804 (I;DE;In German)

Technische Univ. Eindhoven (Netherlands)
Reflectometry and transport in thermonuclear plasmas in the Joint European Torus, 17:8285 (I;NL)

Technische Univ. Muenchen, Garching (Germany). Fakultaet fuer Physik
Diffusion and drift of charges in semiconductor detectors, 17:7455 (R;DE;In German)

Temple Univ., Philadelphia, PA (United States). Dept. of Physics
Experimental investigations in particle physics at intermediate energies: Performance report for December 1, 1990–November 30, 1991, 17:7940 (R;US)

Personal Author Index

Authors' surnames are indexed in the form appearing in the publication cited; given names generally have been reduced to initials. For documents with multiple authors, each author name is indexed. The entry for a primary author (first author listed on an abstracted document) includes the full document title and citation number. Entries for other authors provide a cross-reference to the primary author. Also included is information on the document type, country of publication, and the document language listed in parentheses in the format (J;FR;In French and English). Accent marks are not input because of computer alphabetization. Spelling and transliteration follow standard conventions.

Subject Index

This index is arranged by subject descriptors selected from those assigned to each citation in this publication. Subject descriptors are selected from a controlled thesaurus of terms, ETDE/PUB–2, *International Energy: Subject Thesaurus.* In order to enhance indexing, subject descriptor entries generally consist of a pair of descriptors: a main term and a qualifier term. Each entry includes the full title (which may be followed by supplementary descriptive information in parentheses) and the citation number. Additional information given in parentheses indicates the document type (an abbreviation such as B for book), the country of publication (such as DE for Federal Republic of Germany), and the language if non-English.

See references guide users from synonymous terms to the descriptors selected for the concept. *See also* references indicate subject concepts that are more specific than a particular descriptor. To gain complete subject coverage, all such terms should be reviewed.

SACCHARIDES

AMMONIA
Control of catalytic hydrotreating selectivity with ammonia, 17:6148 (RA;US)
Low energy ion-molecule reactions and chemiionization kinetics: Progress report, February 1, 1991–January 31, 1992, 17:8144 (R;US)
[Time-resolved FTIR emission studies of laser photofragmentation and radical reactions]: Progress report, 1 April 1991–15 November 1991, 17:7100 (R;US)

AMMONIUM COMPOUNDS
Radiation-catalytic oxidation of ammonium bisulfite, 17:7126 (IA;SU;In Russian)

AMOEBA
Identification, characterization and cloning of Entamoeba histolytica adhesins: Their potential use in diagnosis, 17:7657 (RA;XA)

AMORPHOUS STATE
Transportation properties of amorphous state InSb and its metastable middle phase, 17:8196 (R;CN;In Chinese)

AMYLUM
See STARCH

ANALOG-TO-DIGITAL CONVERTERS
Development of indigenous Wilkinson type ADCs (50/100 MHz), 17:7438 (IA;IN)

ANALYSIS (THERMAL)
See THERMAL ANALYSIS

ANGIOGRAPHY
See BIOMEDICAL RADIOGRAPHY

ANGRA-1 REACTOR
Preoperational radiation measurements at the Angra-I nuclear power plant. Part 1, 17:6722 (I;BR)

ANIMAL CELLS
See also CHO CELLS
TUMOR CELLS
Genotoxicity of inhaled energy effluents, 17:7798 (RA;US)
ANIMALS
See also WILD ANIMALS
Ecological survey of M-Field, Edgewood Area Aberdeen Proving Ground, Maryland, 17:7589 (R;US)
ANL
A plan for administrative computing at ANL: FY1992–FY1994, 17:8394 (R;US)
Universities and national laboratory roles in nuclear engineering, 17:8377 (R;US)
ANNIHILATION
Positron-annihilation 2D-ACAR measurements in $Bi_2Sr_2CaCu_2O_{8+x}$: Contribution to Workshop on fermiology of high-T_c superconductors, Argonne, March 25-27, 1991, 17:8174 (R;NL)
ANTENNAS
Modeling pulse-driven antennas, 17:7219 (RA;US)
ANTHRACITE
Hydrocarbon-oil encapsulated bubble flotation of fine coal, 17:6105 (RA;US)
ANTIBODIES
Polymerization of immunoglobulin domains: A model system for the development of facilitated macromolecular assembly, 17:7635 (R;US)
ANTIMONY ALLOYS
Wettability analysis of tin-based, lead free solders, 17:6951 (R;US)
ANTINEUTRINO REACTIONS
Rescattering in ν/ν-bar-deuteron reactions, 17:7927 (R;NL)
ANTIOMEGA PARTICLES
Baryon spectroscopy in chiral color dielectric model, 17:7981 (IA;IN)
ANTIOXIDANTS
Combined SO_2/NO_x control using ferrous·EDTA and a secondary additive in a lime-based aqueous scrubber system, 17:6230 (R;US)
ANTIPROTON REACTIONS
Hadronic spin excitations in finite fermion systems, 17:8111 (R;DE;In German)
APPARATUS
See EQUIPMENT
APPENDIX (VERMIFORM)

APPLICATORS (RADIOTHERAPY)
See RADIATION SOURCES
AQUATIC ECOSYSTEMS
An evaluation of aquatic toxicity data with a population growth model for application to environmental hazard assessment, 17:7803 (R;US)
AQUEOUS SOLUTIONS
Effect of OH^- and Cl^- concentrations on yields of Cl_2^-formation in concentrated aqueous solutions of chlorides, 17:7118 (IA;SU;In Russian)
Features of radiolysis of diluted solutions of cesium iodide, 17:7112 (IA;SU;In Russian)
Investigation into reactivity of hydrated electrons and H atoms in respect to actinoid ions in acidic aqueous solutions using pulsed radiolysis method, 17:7117 (IA;SU;In Russian)
AQUIFERS
Adsorption of chromate/organic-acid mixtures in aquifer materials: Technical progress report, 1 July 1990–30 June 1991, 17:7573 (R;US)
ARCHAEOLOGY
Inter and intrasite analyses of cultural materials from U20aw, Nye County, Nevada: Technical report No. 66, 17:6778 (R;US)
ARGENTINA
Agreement between the Republic of Argentina and the Federative Republic of Brazil for the exclusively peaceful use of nuclear energy, 17:6881 (R;XA)
ARGON
Investigations of breakdown of rare gases by short pulses of 1.06μm laser radiation, 17:8142 (R;XA)
ARGON 34
Simple formula of heavy-ion potential with spin-density term in energy density formalism : s-d and fsub(7/2) shell nuclei, 17:8095 (IA;IN)
ARGON 40 REACTIONS
Preparation of a multitracer solution from gold foil bombarded by 95 MeV/nucleon ^{40}Ar ions in ring cyclotron (Preprint no. NC-05), 17:7138 (IA;IN)
ARGONNE NATIONAL LABORATORY
See ANL
ARGONNE SUPERCONDUCTING LINAC

AROMATIC ACIDS
See CARBOXYLIC ACIDS
ARRAY PROCESSORS
General purpose parallel supercomputing, 17:8433 (R;US)
SISAL reference manual: Language version 2.0, 17:8434 (R;US)
The work/exchange model: A generalized approach to dynamic load balancing, 17:8404 (R;US)
ASBESTOS
Annual summary report of the decontamination and decommissioning surveillance and maintenance program at Oak Ridge National Laboratory for period ending September 30, 1991, 17:6593 (R;US)
Mechanisms of action of heavy metals and asbestos on cultured animal cells: Adaptation, transformation and progression: Final progress report, August 1, 1979–January 31, 1987, 17:7802 (R;US)
ASDEX TOKAMAK
Impurity transport and production in lower hybrid discharges in ASDEX, 17:8244 (RA;IT)
Parametric decay instabilities studies in Asdex, 17:8251 (RA;IT)
Power absorption and energy confinement during LH injection in ASDEX, 17:8242 (RA;IT)
ASHES
See also FLY ASH
Characterization and modification of particulate properties to enhance filtration performance: Quarterly technical progress report, March 1989–May 1989, 17:6567 (R;US)
Combustion fume structure and dynamics, 17:6261 (RA;US)
Demonstration plant for IGCC using the U-GAS process, 17:6160 (R;US)
Digital scanning electron microscopy techniques for the characterization of coal minerals and coal ash, 17:6200 (RA;US)
Field study of wastes from fluidized-bed combustion technologies, 17:6248 (RA;US)
Houston Lighting and Power Company's coal combustion byproducts utilization program: A decade of success, 17:6563 (RA;US)
The Liquids From Coal mild gasification process: Handling and combustion properties of the solid process derived fuel, 17:6127 (RA;US)
ASPECT RATIO
The Proto-ETA small-aspect-ratio experiment, 17:8347 (RA;XA)
ASPHALTENES
Configurational diffusion of coal macromolecules, 17:6218 (RA;US)
ASSE SALT MINE
Progress report of the 600 m borehole project of the CEC programme on radioactive waste management and disposal: January-July 1990, 17:6381 (R;NL)
Progress report of the ECN contribution to the experiments in the HAW project: 2nd half year 1990, 17:6382 (R;NL)
Progress report of the ECN contribution to the experiments in the HAW project: 2nd quarter 1990, 17:6380 (R;NL)
Progress report of the ECN contribution to the experiments in the HAW project: 2nd half year 1990, 17:6382 (R;NL)

ASSOCIATED GAS
Handbook of safety technology of coal mines. 2.: Gas outburst-rock-burst, 17:6251 (I;JP;In Japanese)

ASTROPHYSICS
Collaborative research on experimental astrophysics: Final report, 17:7863 (R;US)

ATLAS SUPERCONDUCTING LINAC
First operation of ATLAS using the PII linac and a comparison to tandem injection, 17:7293 (R;US)

ATMOSPHERIC CHEMISTRY
Atmospheric Sciences Program: Summaries of research in FY 1991, 17:7544 (R;US)
Impact of reactive nitrogen emissions from fossil fuel combustion and biomass burning on atmospheric chemistry: Revision 1, 17:7563 (R;US)

ATMOSPHERIC CIRCULATION
Atmospheric Sciences Program: Summaries of research in FY 1991, 17:7544 (R;US)
Description of codes and models to be used in risk assessment, 17:7616 (R;US)

CADMIUM
Mechanisms of action of heavy metals and asbestos on cultured animal cells: Adaptation, transformation and progression: Final progress report, August 1, 1979–January 31, 1987, 17:7802 (R;US)

CADMIUM 106
Microscopic study of high-spin yrast spectra in doubly even cadmium isotopes, 17:8022 (IA;IN)

CADMIUM 108
Microscopic study of high-spin yrast spectra in doubly even cadmium isotopes, 17:8022 (IA;IN)

CADMIUM 110
Microscopic study of high-spin yrast spectra in doubly even cadmium isotopes, 17:8022 (IA;IN)

CADMIUM TELLURIDE SOLAR CELLS
Polycrystalline thin film materials and devices: Annual subcontract report, 16 January 1990–15 January 1991, 17:6525 (R;US)

CALCIUM
Determination of calcium in sodium by vacuum distillation-atomic absorption spectrophotometry, 17:7040 (R;CN;In Chinese)

CALCIUM 40 TARGET
Alpha-clustering transfer effects in colliding s-d shell nuclei, 17:8096 (IA;IN)
Fusion limited by temperature, 17:8097 (IA;IN)
Hadronic spin excitations in finite fermion systems, 17:8111 (R;DE;In German)
The (^{3}He, ^{7}Be) reaction on light and medium mass nuclei, 17:8118 (R;XA)

[Electromagnetic studies of nuclear structure and reactions]: Progress summary, [January 1, 1991–December 31, 1991], 17:8061 (R;US)

CALCIUM 41
Enhancing sample preparation capabilities for accelerator mass spectrometry radiocarbon and radiocalcium studies, 17:7060 (R;US)

CALCIUM 48 TARGET
Hadronic spin excitations in finite fermion systems, 17:8111 (R;DE;In German)

CALCIUM COMPOUNDS
See also CALCIUM HYDROXIDES
CALCIUM OXIDES
Effects of calcium magnesium acetate on the combustion of coal-water slurries, 17:6258 (RA;US)
Effects of calcium magnesium acetate on the combustion of coal-water slurries: Project status report, 1 September 1989–30 November 1989, 17:6279 (R;US)
Fundamental investigation of Duct/ESP phenomena: 1.7 MW pilot parametric testing results: Topical report No. 2, 17:6244 (R;US)

CALCIUM HYDROXIDES
Duct injection technology prototype development: Materials corrosion report, Revision 1, 17:6566 (R;US)
Process development for production of coal/sorbent agglomerates: Final technical report, September 1, 1990–August 31, 1991, 17:6117 (R;US)

CALCIUM OXIDES
A novel coal feeder for production of low sulfur fuel: Annual technical progress report, October 1, 1990–October 1, 1991, 17:6173 (R;US)
Chemistry of coal-related microparticles: [Quarterly report], 1 July 1991–31 September 1991, 17:6175 (R;US)
Comparative study of the reactions of metal oxides with SO_2 and H_2S, 17:6234 (RA;US)
Comparison of lime and iron oxide for high temperature sulfur removal, 17:6239 (RA;US)

CALCULUS (DIFFERENTIAL)
See DIFFERENTIAL CALCULUS

CALCUTTA CYCLOTRON
A ND-100 based data acquisition facility at VECC, 17:7322 (IA;IN)

CALIFORNIA
Fluid flow, element migration, and petrotectonic evolution of the early Mesozoic Central Klamath island arc, northwesternmost California: Progress report, September 15, 1990–September 14, 1991, 17:6542 (R;US)

CALIFORNIUM 252
Charge distribution in the spontaneous fission of ^{252}Cf: Determination of cumulative yields of ^{127g}Sn and ^{128}Sn, 17:8054 (R;CN;In Chinese)
Charge distribution in the spontaneous fission of ^{252}Cf: Determination of fractional cumulative yields of ^{133m}Te and ^{123g}Te, 17:8053 (R;CN;In Chinese)
Charge distribution in the spontaneous fission of ^{252}Cf: Determination of cumulative yields of ^{127g}Sn and ^{128}Sn, 17:8054 (R;CN;In Chinese)
Charge distribution in the spontaneous fission of ^{252}Cf: Determination of fractional cumulative yields of ^{133m}Te and ^{123g}Te, 17:8053 (R;CN;In Chinese)

CALORIMETERS
Calibration of the electromagnetic part of the ZEUS calorimeter with electrons, 17:7396 (R;DE;In German)
Construction of a test facility for the readout electronics of the ZEUS calorimeter, 17:7395 (R;DE;In German)
Field test results of the dry heat exchanger calorimeter at LANL, 17:7479 (R;US)
Heat distribution error in radiometric calorimeters, 17:7478 (R;US)
Procedure for monitoring and calibration of the photon detection system of the SAPHIR spectrometer, 17:7399 (R;DE;In German)
Retrofittable electrical heater standard for the calibration of heat flow calorimeters, 17:6475 (R;US)
Studies on the intercalibration as well as construction and test of a gas-flow monitoring facility of the SAPHIR shower detector, 17:7404 (R;DE;In German)
The uranium calorimeter of the ZEUS detector - studies on the uniformity of the energy measurement of electrons, 17:7394 (R;DE;In German)

DIAMONDS
FULLERENES
GRAPHITE
Chemistry of bimetallic and alloys surfaces: Progress report, June 1, 1990–November 30, 1991, 17:7078 (R;US)
Reactions of metal ions and their clusters in the gas phase using laser ionization–Fourier transform mass spectrometry: Progress report, February 1, 1990–January 31, 1991, 17:7070 (R;US)
Stopping power relation for low energy positrons, 17:8126 (IA;IN)
The effect of neutron irradiation on the structure and properties of carbon-carbon composite materials, 17:8326 (R;US)
Total stopping power in low energy electrons, 17:8125 (IA;IN)

CARBON 12
Experimental investigations in particle physics at intermediate energies: Performance report for December 1, 1990–November 30, 1991, 17:7940 (R;US)

CARBON 12 BEAMS
Heavy ion channeling in thin silicon single crystal, 17:8186 (IA;IN)

CARBON 12 TARGET
Hadronic spin excitations in finite fermion systems, 17:8111 (R;DE;In German)
The (^{3}He, ^{7}Be) reaction on light and medium mass nuclei, 17:8118 (R;XA)
[Electromagnetic studies of nuclear structure and reactions]: Progress summary, [January 1, 1991–December 31, 1991], 17:8061 (R;US)

CARBON 14
Enhancing sample preparation capabilities for accelerator mass spectrometry radiocarbon and radiocalcium studies, 17:7060 (R;US)

CARBON BLACK
Process development of mild gasification for midwestern bituminous and western low-rank coals, 17:6125 (RA;US)
The toxicity of particles from combustion processes, 17:7801 (R;US)

CARBON DIOXIDE
Greenhouse gases: Sources and emissions, 17:7564 (R;US)
Liquid phase methanol LaPorte process development unit: Modification, operation, and support studies: Task 3.5: Development of fundamental rate models for methanol synthesis in a slurry reactor, 17:6180 (R;US)

Oxo chemistry in supercritical carbon dioxide, 17:7062 (R;US)
Process development for production of coal/sorbent agglomerates: Final technical report, September 1, 1990–August 31, 1991, 17:6117 (R;US)
Supercritical fluid carbon dioxide cleaning of plutonium parts, 17:6365 (R;US)
Tradeable CO_2 emission permits for cost-effective control of global warming, 17:6283 (R;US)

CARBON FIBERS
Creep in fiber-reinforced epoxy-resin composites, 17:7032 (RA;US)

CARBON MONOXIDE
A novel process for methanol synthesis, 17:6506 (RA;US)
Alkali/TX_2 catalysts for CO/H_2 conversion to C_1-C_4 alcohols, 17:6144 (RA;US)
Design of a high activity and selectivity alcohol catalyst, 17:6138 (RA;US)
Greenhouse gases: Sources and emissions, 17:7564 (R;US)
Kinetics and dynamics of oxidation reactions involving an adsorbed CO species on bulk and supported platinum and copper-oxide: First year annual report, January 1, 1991–December 31, 1991, 17:7545 (R;US)
Liquid phase methanol LaPorte process development unit: Modification, operation, and support studies: Task 3.5: Development of fundamental rate models for methanol synthesis in a slurry reactor, 17:6180 (R;US)
Novel reactor configuration for syngas conversion to alcohols, 17:6150 (RA;US)
Probe molecule studies: Active species in alcohol synthesis, 17:6140 (RA;US)
The interaction of formic acid with Pt(111) and the effect of coadsorbed water, atomic oxygen, and carbon monoxide, 17:7084 (R;US)

CARBON STEELS
Cyclone reburning retrofit-corrosion evaluation: Final technical report, September 1, 1990–August 31, 1991, 17:6280 (R;US)
Duct injection technology prototype development: Materials corrosion report, Revision 1, 17:6566 (R;US)
Irradiation corrosion of waste package container materials in air/steam environment, 17:6451 (R;US)
Modeling superplastic materials, 17:6954 (RA;US)

CARBON TETRACHLORIDE
Ultrasonic process for detoxification of groundwater, 17:7566 (R;US)

CARBONACEOUS MATERIALS
See also COAL
Inhibition of retrogressive reactions in coal/petroleum coprocessing: Quarterly technical progress report, July 1, 1991–September 30, 1991, 17:6170 (R;US)

CARBONYLS
[Comparison of group transfer, inner shere and outer sphere electron transfer mechanisms for organometallic complexes]: Summary, 17:7071 (R;US)

CARBOXYLIC ACIDS
Basic properties of coals and other solids, 17:6208 (RA;US)

CARCINOGENESIS
See also LEUKEMOGENESIS
On the cells of origin of radiogenic thyroid cancer: New studies based on an old idea, 17:7744 (R;US)
Radiogenic neoplasia in thyroid and mammary clonogens: Progress report, January 1, 1991–December 31, 1991, 17:7746 (R;US)
Will parental exposure to radiation induce tumor in sibling ?, 17:7778 (RA;JP;In Japanese)

CARCINOMAS
Growth factors in radiation carcinogenesis, 17:7795 (RA;US)

CARS SPECTROSCOPY

BROWN COAL
SUBBITUMINOUS COAL
Biodegradation
Applications of micellar enzymology to clean coal technology, 17:6133 (RA;US)
Biotic and abiotic carbon to sulfur bond cleavage, 17:6141 (RA;US)
Genetics of coal bioliquefaction by Neurospora crassa, 17:7641 (RA;US)
Chemical Analysis
Characterization of organic nitrogen in IBCSP coals: Final technical report, September 1, 1990–August 31, 1991, 17:6228 (R;US)
Chemical Properties
The single electron chemistry of coals, July 1, 1991–September 30, 1991, 17:6227 (R;US)
Cleaning
The effect of moderate coal cleaning on microbial removal of organic sulfur: Final technical report, September 1, 1990–August 31, 1991, 17:6113 (R;US)
Combustion
Advanced atomization concept for CWF burning in small combustors: Phase 2, Quarterly technical progress report No. 3, 1 April 1991–30 June 1991, 17:6559 (R;US)
Advanced coal-fired glass melting development program: Phase 2, Final report, 17:6269 (R;US)
Conceptual design of coal-fueled diesel system for stationary power applications, 17:6875 (R;US)
Development of an advanced high efficiency coal combustor for boiler retrofit: Task 3, Demonstration scale testing at 50 × 10^6 BTU/HR: Final report, 17:6281 (R;US)
Innovative clean coal technology (ICCT): 500 MW demonstration of advanced wall-fired combustion techniques for the reduction of nitrogen oxide (NO$_x$) emissions from coal-fired boilers: Phase 1, Baseline tests report, 17:6277 (R;US)
Nitrogen oxide abatement by distributed fuel addition: Quarterly report No. 6, November 1, 1988–January 31, 1989, 17:6270 (R;US)
Refractory experience in circulating fluidized bed combustors, Task 7: Final report, 17:6267 (R;US)
Wear mechanism and wear prevention in coal-fueled diesel engines: Monthly progress report, 27 April 1990–25 May 1990, 17:6876 (R;US)
Combustion Kinetics
Combustion fume structure and dynamics, 17:6261 (RA;US)
Combustion of dense streams of coal particles, 17:6266 (RA;US)
Effects of catalytic mineral matter on CO/CO$_2$ ratio, temperature and burning time for char combustion, 17:6264 (RA;US)
Mineral transformations and fragmentation in coal combustion, 17:6265 (RA;US)
Pyrite thermochemistry, ash agglomeration, and char fragmentation during pulverized coal combustion, 17:6262 (RA;US)
Combustion Products
The toxicity of particles from combustion processes, 17:7801 (R;US)
Comminution
A study of permeability and porosity in pulverized coal, 17:6221 (R;US)
Development of an advanced high efficiency coal combustor for boiler retrofit: Task 3, Demonstration scale testing at 50 × 10^6 BTU/HR: Final report, 17:6281 (R;US)
Nitrogen oxide abatement by distributed fuel addition: Quarterly report No. 10, November 1, 1989–January 31, 1990, 17:6274 (R;US)
Conversion
Exploratory coprocessing research: Final report, September 1988–June 1991, 17:6167 (R;US)
Phase behavior of coal fluids: Data for correlation development: Report for the period October 15, 1989–January 15, 1990, 17:6192 (R;US)
Phase equilibrium data for development of correlations for coal fluids: Final report, 15 September 1986–15 September 1990, 17:6191 (R;US)
Coprocessing
Coal liquefaction process streams characterization and evaluation: Quarterly technical progresss report, January 1–March 31, 1991, 17:6177 (R;US)
Inhibition of retrogressive reactions in coal/petroleum coprocessing, 17:6145 (RA;US)
Inhibition of retrogressive reactions in coal/petroleum coprocessing: Quarterly technical progress report, July 1, 1991–September 30, 1991, 17:6170 (R;US)
Data
An assessment of the quality of selected EIA data series: Coal data, 1983–1988 (Contains glossary), 17:6098 (R;US)
Deashing
Enhancement of surface properties for coal beneficiation, 17:6102 (RA;US)
Demand
Clean coal technology and emissions trading: Is there a future for high-sulfur coal under the Clean Air Act Amendments of 1990?, 17:6282 (R;US)
Depolymerization
Novel process for depolymerization of coal to C$_2$-C$_4$ hydrocarbons, 17:6151 (RA;US)
The single electron chemistry of coals, July 1, 1991–September 30, 1991, 17:6227 (R;US)
Desulfurization
A novel coal feeder for production of low sulfur fuel: Annual technical progress report, October 1, 1990–October 1, 1991, 17:6173 (R;US)
Applications of micellar enzymology to clean coal technology, 17:6133 (RA;US)
Biotic and abiotic carbon to sulfur bond cleavage, 17:6141 (RA;US)
Chemical coal cleaning using selective oxidation: Final technical report, September 1, 1990–August 31, 1991, 17:6183 (R;US)
Chemistry of coal-related microparticles, 17:6128 (RA;US)
Control of pyrite surface chemistry in physical coal cleaning, 17:6104 (RA;US)
Electrochemistry of Thiobacillus ferrooxidans reactions with pyrite, 17:6130 (RA;US)

Enhancement of surface properties for coal beneficiation, 17:6102 (RA;US)
Evaluation, engineering and development of advanced cyclone processes: Quarterly technical progress report No. 4, July 1, 1991–September 30, 1991, 17:6118 (R;US)
Novel coal feeder for low-sulfur fuel, 17:6155 (RA;US)
Pyrite surface characterization and control for advanced fine coal desulfurization technologies, 17:6214 (RA;US)
The effect of moderate coal cleaning on microbial removal of organic sulfur: Final technical report, September 1, 1990–August 31, 1991, 17:6113 (R;US)
VHF EPR determination of the chemical forms of organic sulfur in coal: Final technical report, September 1, 1990–August 31, 1991, 17:6188 (R;US)

Devolatilization
Nitrogen oxide abatement by distributed fuel addition: Quarterly report No. 9, August 1, 1989–October 31, 1989, 17:6273 (R;US)

Dissolution
Genetics of coal bioliquefaction by Neurospora crassa, 17:7641 (RA;US)
Mild coal pretreatment to improve liquefaction reactivity, 17:6152 (RA;US)

Drying
Mild gasification of Usibelli coal in an inclined fluidized-bed reactor, 17:6162 (R;US)

Electron Transfer
Single electron chemistry of coals, 17:6217 (RA;US)

Flocculation
A new approach in ultrapurification of coal by selective flocculation, 17:6101 (RA;US)

Flotation
Characterization of multiphase flow during air-sparged hydrocyclone flotation by X-ray CT, 17:6106 (RA;US)
Selective flotation of fossil resin from Western coal: Quarterly report, June 1, 1991–August 31, 1991, 17:6119 (R;US)

Fuel Slurries
Conceptual design of coal-fueled diesel system for stationary power applications, 17:6875 (R;US)

Grinding
Mild gasification of Usibelli coal in an inclined fluidized-bed reactor, 17:6162 (R;US)
Mulled coal: A beneficiated coal form for use as a fuel or fuel intermediate: Phase 1 feasibility studies: Final, 17:6111 (R;US)

Heat Treatments
Exploratory coprocessing research: Final report, September 1988–June 1991, 17:6167 (R;US)

Hydrogenation
Advanced, soluble hydroliquefaction and hydrotreating catalysts, 17:6142 (RA;US)
Method for dispersing catalyst onto particulate material, 17:6197 (PA;US)
Novel technique for coal pyrolysis and hydrogenation product analysis, 17:6209 (RA;US)
Process and apparatus for coal hydrogenation, 17:6195 (PA;US)

Hydrolysis
Exploratory coprocessing research: Final report, September 1988–June 1991, 17:6167 (R;US)
Fundamental studies of water pretreatment of coal: Seventh quarterly report, April 1, 1991–June 30, 1991, 17:6176 (R;US)

Information
Quarterly coal report, April–June 1991, 17:6286 (R;US)

Liquefaction
Method for dispersing catalyst onto particulate material, 17:6197 (PA;US)
Process and apparatus for coal hydrogenation, 17:6195 (PA;US)

Macerals
Chemistry of coal-related microparticles: [Quarterly report], 1 July 1991–31 September 1991, 17:6175 (R;US)

Microstructure
Spin-mapping of coal structures with ESE and ENDOR: Eighth quarterly (second annual) report, 17:6224 (R;US)

Molecular Structure
Coalification by clay-catalyzed oligomerization of plant monomers, 17:6203 (RA;US)
Spin-mapping of coal structures with ESE and ENDOR: Eighth quarterly (second annual) report, 17:6224 (R;US)

Morphological Changes
Permeability changes in coal resulting from gas desorption, 17:6207 (RA;US)

Oxidation
Effects of light metal compounds on coal and carbon gasification, 17:6216 (RA;US)

Oxygen Compounds
The dual role of oxygen functions in coal pretreatment and liquefaction: Crosslinking and cleavage reactions: Second quarterly report, July 1, 1991–September 30, 1991, 17:6193 (R;US)

Pelletizing
Pelletization of fine coals, 17:6103 (RA;US)

Permeability
A study of permeability and porosity in pulverized coal, 17:6221 (R;US)

Plasma Heating
Plasma assisted NO_x reduction in existing coal combustors, 17:6235 (RA;US)

Porosity
A study of permeability and porosity in pulverized coal, 17:6221 (R;US)

Production
The economic case for industrial application of low-rank coal technology, 17:6285 (RA;US)

Pyrolysis
A novel coal feeder for production of low sulfur fuel: Annual technical progress report, October 1, 1990–October 1, 1991, 17:6173 (R;US)
Effects of light metal compounds on coal and carbon gasification, 17:6216 (RA;US)
Methane formation and retention in coal: Quarterly technical progress report, July 1, 1991–September 30, 1991, 17:6226 (R;US)
Novel technique for coal pyrolysis and hydrogenation product analysis, 17:6209 (RA;US)

Removal
Evaluation, engineering and development of advanced cyclone processes: Quarterly technical progress report No. 4, July 1, 1991–September 30, 1991, 17:6118 (R;US)

Research Programs
Fossil Energy Program semiannual progress report, April 1990–September 1990, 17:6194 (R;US)

Screening
Mild gasification of Usibelli coal in an inclined fluidized-bed reactor, 17:6162 (R;US)

Solids Flow
A rheometer for measuring the material moduli for granular solids, 17:6215 (RA;US)

Staged Combustion
Nitrogen oxide abatement by distributed fuel addition: Quarterly report No. 10, November 1, 1989–January 31, 1990, 17:6274 (R;US)
Nitrogen oxide abatement by distributed fuel addition: Quarterly report No. 7, February 1, 1989–April 30, 1989, 17:6271 (R;US)
Nitrogen oxide abatement by distributed fuel addition: Quarterly report No. 8, May 1, 1989–July 31, 1989, 17:6272 (R;US)
Nitrogen oxide abatement by distributed fuel addition: Quarterly report No. 9, August 1, 1989–October 31, 1989, 17:6273 (R;US)

Structural Chemical Analysis
Advanced NMR approaches in the characterization of coal, 17:6211 (RA;US)
Spin-mapping of coal structures with ESE and ENDOR, 17:6204 (RA;US)

Sulfur Content
Clean coal technology and emissions trading: Is there a future for high-sulfur coal under the Clean Air Act Amendments of 1990?, 17:6282 (R;US)

VHF EPR determination of the chemical forms of organic sulfur in coal: Final technical report, September 1, 1990–August 31, 1991, 17:6188 (R;US)

Supercritical Gas Extraction
Supercritical fluid thermodynamics for coal processing, 17:6154 (RA;US)

Surface Properties
Chemical characterization of the surface sites of coal: Final report, 17:6222 (R;US)
Enhancement of surface properties for coal beneficiation, 17:6102 (RA;US)

Surface Treatments
Method for dispersing catalyst onto particulate material, 17:6197 (PA;US)

Swelling
A new model of coal-water interactions and relevance for dewatering, 17:6212 (RA;US)
Molecular accessibility in solvent swelled coal: Quarterly report, November 1991, 17:6229 (R;US)
Thermodynamics of the solvent swelling of coal: Final technical report, September 1, 1988–August 31, 1991, 17:6225 (R;US)

Synergism
Exploratory coprocessing research: Final report, September 1988–June 1991, 17:6167 (R;US)

Trade
Coal supply and transportation model (CSTM): Model documentation, 17:6287 (R;US)

COAL EXTRACTS
^{31}P NMR analysis of coal moieties bearing -OH, -NH and -SH functions, 17:6205 (RA;US)

COAL FINES
Combustion characterization of beneficiated coal-based fuels: Quarterly report No. 4, February–April 1990, 17:6275 (R;US)
Dewatering studies of fine clean coal: Annual technical report, September 1, 1990–August 31, 1991, 17:6112 (R;US)
Fine coal flotation plant waste comparison–column vs. sub-a cells: Final technical report, September 1, 1990–August 31, 1991, 17:6116 (R;US)
Process development for production of coal/sorbent agglomerates: Final technical report, September 1, 1990–August 31, 1991, 17:6117 (R;US)
Pyrite surface characterization and control for advanced fine coal desulfurization technologies: First annual report, September 1, 1990–August 30, 1991, 17:6120 (R;US)
Recovery of coal fines from preparation plant effluents: Final technical report, September 1, 1990–August 31, 1991, 17:6115 (R;US)
Recovery of fine coal from waste streams using advanced column flotation: Annual report, September 1, 1990–August 31, 1991, 17:6114 (R;US)
Study of fine and ultrafine particles for coal cleaning: Fossil energy quarterly report, April 1, 1990–June 30, 1990, 17:6121 (R;US)

COAL GAS
Comparative study of the reactions of metal oxides with SO_2 and H_2S, 17:6234 (RA;US)
High-temperature membranes for H_2S and SO_2 separations, 17:6159 (RA;US)
Mechanistic and kinetic studies of high-temperature coal gas desulfurization sorbents, 17:6158 (RA;US)
Rapid pressure swing absorption cleanup of post-shift reactor synthesis gas, 17:6153 (RA;US)
Wilsonville Hot Gas Cleanup Test Facility, 17:6123 (RA;US)

COAL GASIFICATION
See also U-GAS PROCESS
Demonstration plant for IGCC using the U-GAS process, 17:6160 (R;US)
Effects of light metal compounds on coal and carbon gasification, 17:6216 (RA;US)
Enhanced coal hydrogasification via oxidative pretreatment, 17:6149 (RA;US)
Fundamental studies in production of C_2-C_4 hydrocarbons from coal, 17:6132 (RA;US)
Process development of mild gasification for midwestern bituminous and western low-rank coals, 17:6125 (RA;US)
Reactivity of young chars via energetic distribution measurements, 17:6137 (RA;US)
Steam gasification of carbon: Catalyst properties, 17:6143 (RA;US)
The Liquids From Coal mild gasification process: Handling and combustion properties of the solid process derived fuel, 17:6127 (RA;US)

COAL INDUSTRY
US energy industry financial developments, 1991 third quarter, 17:6821 (R;US)

COAL LIQUEFACTION
See also LIQUID PHASE METHANOL PROCESS
Advanced, soluble hydroliquefaction and hydrotreating catalysts, 17:6142 (RA;US)
Bimetallic promotion of cooperative hydrogen transfer and heteroatom removal in coal liquefaction, 17:6131 (RA;US)
Catalysis and cocatalysis of bond cleavages in coal and coal analogs, 17:6139 (RA;US)
Chemical kinetics and transport processes in supercritical fluid extraction of coal, 17:6156 (RA;US)
Fundamental studies of water pretreatment of coal: Seventh quarterly report, April 1, 1991–June 30, 1991, 17:6176 (R;US)
Mild coal pretreatment to improve liquefaction reactivity, 17:6152 (RA;US)
Novel supports for coal liquefaction catalysts, 17:6146 (RA;US)
Phase behavior of coal fluids: Data for correlation development: Report for the period October 15, 1989–January 15, 1990, 17:6192 (R;US)
Phase equilibrium data for development of correlations for coal fluids: Final report, 15 September 1986–15 September 1990, 17:6191 (R;US)
Preconversion catalytic deoxygenation of phenolic functional groups, 17:6136 (RA;US)
Supercritical fluid thermodynamics for coal processing, 17:6154 (RA;US)
The effect of selective solvent absorption on coal conversion, 17:6147 (RA;US)

COAL LIQUEFACTION PLANTS
SRC-I computer model, 17:6107 (R;US)

COAL LIQUIDS
Advanced, soluble hydroliquefaction and hydrotreating catalysts, 17:6142 (RA;US)
Bimetallic promotion of cooperative hydrogen transfer and heteroatom removal in coal liquefaction, 17:6131 (RA;US)
Coal liquefaction process streams characterization and evaluation: Quarterly technical progresss report, January 1–March 31, 1991, 17:6177 (R;US)
Configurational diffusion of coal macromolecules, 17:6218 (RA;US)
Control of catalytic hydrotreating selectivity with ammonia, 17:6148 (RA;US)
Equilibrium and volumetric data and model development of coal fluids, 17:6220 (RA;US)
Fundamental studies of catalytic processing of synthetic liquids, 17:6135 (RA;US)
Indirect electrolysis process for removal of pollutants from coal liquids, 17:6157 (RA;US)
Novel technique for coal pyrolysis and hydrogenation product analysis, 17:6209 (RA;US)
Phase behavior of coal fluids: Data for correlation development: Report period: August 15, 1989–October 15, 1989, 17:6190 (R;US)
The Liquids From Coal mild gasification process: Handling and combustion properties of the solid process derived fuel, 17:6127 (RA;US)

COAL MINES
Handbook of safety technology of coal mines. 1.: Gas-coal dust explosions, 17:6250 (I;JP;In Japanese)

COAL MINING
Black coal. Facts and trends 1991, 17:6288 (I;DE;In German)

COAL PREPARATION

COUNTERS (RADIATION)
See RADIATION DETECTORS
COUNTING TECHNIQUES
Limit of sensitivity of low-background counting equipment, 17:8432 (R;US)
CP INVARIANCE
Strong CP violation and the neutron electric dipole moment revisited, 17:7970 (R;US)
CRACKS
Evaluation of structural behavior, geological and hydrogeological characteristics: A dynamic behavior study of rock caverns considering the effects of discontinuities, 17:7584 (R;KR;In Korean)
CRITICAL HEAT FLUX
Critical heat flux test apparatus, 17:6650 (PA;US)
Improvement of analysis system for core thermal hydraulic field and CHF, 17:7181 (R;KR;In Korean)
CRITICALITY
Calculation of the Fast Flux Test Facility fuel pin tests with the WIMS-E and MCNP codes, 17:6333 (R;US)
CRITICALITY ACCIDENTS
See CRITICALITY
RADIATION ACCIDENTS
CROSSED BEAMS
See COLLIDING BEAMS
CRUCIBLES
Fabrication of aluminum nitride crucibles for molten salt and plutonium compatibility studies, 17:6990 (R;US)
CRUDE OIL
See PETROLEUM
CRYOPUMPS
Design of the advanced divertor pump cryogenic system for DIII-D, 17:8342 (R;US)
Development of automatic control method for cryopump system for JT-60 neutral beam injector, 17:8363 (R;JP;In Japanese)
Optimization of thermal design for nitrogen shield of JET cryopump, 17:8341 (R;US)
CRYSTAL GROWTH
Plenum type crystal growth chamber, 17:8367 (PA;US)
CRYSTAL LATTICES
Monte Carlo simulation of the three-state vector Potts model on a three-dimensional random lattice, 17:8176 (R;XA)
CRYSTALS
Neutron spectroscopic investigation of high temperature superconductors, 17:8206 (R;CH;In German)
CULTURE MEDIA
Development of technology for plantlet propagation by tissue culture. (3).: Strawberry callus growth and changes in pH in liquid medium, 17:6500 (R;JP;In Japanese)
CULTURES (TISSUE)
See TISSUE CULTURES
CUMULATIVE EFFECT
See PARTICLE PRODUCTION
CUPRATES
Tunneling in cuprate and bismuthate superconductors, 17:6963 (R;US)
CURIUM
The determination of alpha-emitting nuclides of plutonium, americium and curium in environmental materials: Pt. 1: Sea water, 17:7054 (R;GB)
CURIUM 244 TARGET
Evaluated neutron nuclear data for curium-244, 17:8071 (R;XA)
CURRENT DENSITY
Current density fluctuations and ambipolarity of transport, 17:8223 (R;US)
CURRENTS (ELECTRIC)
See ELECTRIC CURRENTS
CURRENTS (WATER)
See WATER CURRENTS
CUTTING FLUIDS
Potentiometric analysis of water soluble cutting fluid-metal combinations, 17:6935 (R;US)
CUTTING TOOLS
Computer-aided process planning: Development of an expert process planning system: Final report, 17:7154 (R;US)
CYCLOALKANES
Radiation-chemical behaviour and spectroscopic characteristics of solvated electrons in some trialkyl phosphates, 17:7109 (IA;SU;In Russian)
CYCLONE SEPARATORS
Characterization of multiphase flow during air-sparged hydrocyclone flotation by X-ray CT, 17:6106 (RA;US)
CYCLOTRON RESONANCE
See also ELECTRON CYCLOTRON-RESONANCE
Evolution of magnetic moment due to the cyclotron resonance with field ripples in a tokamak, 17:8362 (R;JP;In Japanese)
CYCLOTRONS
Studies on narrowing of time profile of a cyclotron beam by shaping the slit of the ion source, 17:7318 (IA;IN)
The access control and radiation monitoring system for the Austin Hospital PET Centre, 17:7255 (R;AU)
Utilization of CV-28 for fast neutrons production, 17:8008 (IA;BR;In Portuguese)

D

D CODES
DRC2: A code with specialized applications for coupling localized Monte Carlo adjoint calculations with fluences from two-dimensional R-Z discrete ordinates air-over-ground calculations, 17:8133 (R;US)
D MESONS
Lattice calculation of nonleptonic charm decays, 17:7931 (R;US)
Recent heavy flavor physics results from fixed target experiments, 17:7946 (R;US)
D PLUS RESONANCES
See D MESONS
D* PLUS RESONANCES

FISHES
Assessment of the fishery improvement opportunities on the Pend Oreille River: Appendices: Annual report, 1990, 17:6508 (R;US)
Habitat requirements for spawning and rearing of white sturgeon and quantification of extent rearing of habitat available in the Columbia River downstream from Bonneville Dam, 17:6512 (RA;US)
Habitat requirements for spawning and rearing of white sturgeon and quantify the extent of habitat available in the Columbia River between Bonneville and McNary dams, 17:6511 (RA;US)
Life history and population dynamics of subadult and adult white sturgeon in the Columbia River between Bonneville and McNary dams, 17:6509 (RA;US)
Reproduction and early life history characteristics of white sturgeon populations in Columbia River downstream from Bonneville Dam, 17:6510 (RA;US)
FISSILE MATERIALS
Calculation of the Fast Flux Test Facility fuel pin tests with the WIMS-E and MCNP codes, 17:6333 (R;US)
FISSION
See also FAST FISSION
SPONTANEOUS FISSION
Important aspects of fragment angular momentum in medium energy fission, 17:8104 (IA;IN)
FISSION FRAGMENTS
A fission fragment reactor concept for nuclear thermal propulsion, 17:6698 (R;US)
Energy production using fission fragment rockets, 17:6699 (R;US)
Important aspects of fragment angular momentum in medium energy fission, 17:8104 (IA;IN)
The gross and fine structure of the mass distributions of the fragments in the binary fission of actinides, 17:8072 (R;XA)
FISSION NEUTRONS
Calculation method for nuclear fission neutron spectra, 17:8131 (RA;JP;In Japanese)
FISSION PRODUCT RELEASE
A brief review of major problems at Redox, 17:6342 (R;US)
Aerosol behaviour under core meltdown accident conditions, 17:6730 (RA;DE;In German)
Behaviour of a core melt in the LWR containment, 17:6731 (RA;DE;In German)
Fission product release analysis code during accident conditions of HTGR, RACPAC, 17:6725 (R;JP;In Japanese)
Items for over-all Redox contamination improvement, 17:6347 (R;US)
Redox Plant—Ruthenium contamination control, 17:6345 (R;US)
Redox Plant—Ruthenium contamination control, 17:6343 (R;US)
Redox Plant—Ruthenium contamination control, 17:6344 (R;US)

FISSION PRODUCTS
Calculation code system for fission and spallation products, 17:8050 (RA;JP)
On bimodal fission of light actinide nuclei, 17:8112 (RA;JP;In Japanese)
SPARC-90: A code for calculating fission product capture in suppression pools, 17:6749 (R;US)
FISSION YIELD
Fine structures in nuclear charge distribution of fission yield, 17:8039 (RA;JP)
FISSIONABLE MATERIALS MANAGEMENT
See NUCLEAR MATERIALS MANAGEMENT
FLAMES
Premixed turbulent combustion: Progress report, 1 December 1990–30 November 1991, 17:7143 (R;US)
FLAVOR MODEL
Flavor symmetry in the large N_c limit, 17:7973 (R;US)
FLAWS
See DEFECTS
FLIES
See also FRUIT FLIES
Parthenogenetic reproduction in Aleurodicus cocois anacardii (Homoptera, Aleyrodidae), 17:7705 (IA;BR;In Portuguese)
FLOODS
Monitoring and modeling contaminated sediment transport in the White Oak Creek watershed: Environmental Restoration Program, 17:8409 (R;US)
FLOTATION
Fine coal flotation plant waste comparison–column vs. sub-a cells: Final technical report, September 1, 1990–August 31, 1991, 17:6116 (R;US)
FLOW (FLUID)
See FLUID FLOW
FLOW (HEAT)
See HEAT FLOW
FLOW SHEETS
See FLOWSHEETS
FLOWMETERS
An evaluation of flowmeters for the detection of kicks and lost circulation during drilling, 17:6544 (R;US)
FLOWSHEETS
Screening alternative structures for plant control systems: Progress report, October 1, 1988–September 30, 1989, 17:6858 (R;US)
FLUE GAS
A 12-MW-scale pilot study of in-duct scrubbing (IDS) using a rotary atomizer, 17:6243 (R;US)
Calcium duct injection technology for SO_2 control, 17:6232 (RA;US)
Combined SO_2/NO_x control using ferrous·EDTA and a secondary additive in a lime-based aqueous scrubber system, 17:6230 (R;US)
Comparative study of the reactions of metal oxides with SO_2 and H_2S, 17:6234 (RA;US)
Duct injection technology prototype development: Evaluation of engineering data: Topical report No. 2, 17:6245 (R;US)
Electric Power Research Institute, High-Sulfur Test Center report to the Steering Committee, July 1991, 17:6242 (R;US)
Fundamental investigation of Duct/ESP phenomena: 1.7 MW pilot parametric testing results: Topical report No. 2, 17:6244 (R;US)
Healy Clean Coal Project: Technical progress report, quarterly report No. 1 & 2 for the period January–June 1991, 17:6246 (R;US)
High-temperature membranes for H_2S and SO_2 separations, 17:6159 (RA;US)
Pulsed electron beam precharger, 17:6236 (RA;US)
Studies on dust separation in wet scrubbers by water vapour condensation, 17:7553 (R;DE;In German)
FLUENCE (NEUTRON)
See NEUTRON FLUENCE
FLUID FLOW
See also LAMINAR FLOW
TURBULENT FLOW
TWO-PHASE FLOW
Control of tokamak edge fluctuations, 17:8264 (RA;XA)
Hydrodynamic instabilities and coherent structures: Progress report, January 1, 1991–December 31, 1991, 17:8157 (R;US)
Numerical simulation of accelerated interfaces, 17:8172 (R;US)
Validation and testing of the VAM2D computer code, 17:6410 (R;US)
FLUID MECHANICS
See also HYDRAULICS
HYDRODYNAMICS
Code acquisition and development project of the thermo-fluid mechanics group, 17:7187 (RA;US)
FLUIDIZED BED
See FLUIDIZED BEDS
FLUIDIZED BED REACTORS
A neutron diffusion model for a fluidized bed nuclear reactor, 17:6631 (I;BR;In Portuguese)
FLUIDIZED BEDS
Mechanics/heat transfer relation for particle flows, 17:7178 (RA;US)
FLUIDIZED-BED COMBUSTION
Nucla CFB Demonstration Project: Detailed public design report, 17:6268 (R;US)
FLUIDIZED-BED COMBUSTORS
Design and operation of the EERC pilot-scale circulating fluidized-bed combustor, 17:6256 (RA;US)
Predictive models for circulating fluidized bed combustors, 17:6260 (RA;US)
Refractory experience in circulating fluidized bed combustors, Task 7: Final report, 17:6267 (R;US)
Scale-up of circulating fluidized bed coal combustors, 17:6259 (RA;US)
The economic case for industrial application of low-rank coal technology, 17:6285 (RA;US)
FLUIDS
See also CUTTING FLUIDS
GASES
LIQUIDS
Vibrational spectroscopy in high temperature dense fluids, 17:8171 (R;US)
FLUORANTHENE
See CONDENSED AROMATICS
FLUORINATED ALIPHATIC HYDROCARBONS
See also POLYTETRAFLUOROETHYLENE
Greenhouse gases: Sources and emissions, 17:7564 (R;US)
Modeled performance of non-chlorinated substitutes for CFC-11 and CFC-12 in centrifugal chillers, 17:6853 (R;US)
Substituting water for chlorofluorocarbon liquid in density measuring baths for nuclear weapon components on non-fissile alloys, 17:7530 (R;US)
FLUORINE 18
Radiopharmaceuticals for diagnosis and treatment: Progress report, 17:7648 (R;US)
FLUORINE 19 TARGET
Update of the evaluation of the cross sections for the neutron-dosimetry reactions $^{19}F(n,2n)^{18}F$ and $^{93}Nb(n,2n)^{92m}Nb$, 17:8069 (R;XA)
FLUORS
See PHOSPHORS
FLUREX PROCESS
Chemical research and development monthly report and quarterly synopsis, March 1957, 17:6331 (R;US)
FLUX (NEUTRON)
See NEUTRON FLUX
FLUXGATE MAGNETOMETERS
Development of three-dimensional compact magnetic dosimeter for environmental magnetic field monitoring, 17:8366 (R;JP;In Japanese)
FLY ASH
Combustion fume structure and dynamics, 17:6261 (RA;US)

Houston Lighting and Power Company's coal combustion byproducts utilization program: A decade of success, 17:6563 (RA;US)
Improved utilization of coal derived fly ash in concrete, 17:6996 (RA;US)
Northern States Power Company Sherburne County Units 1 and 2 fly ash pond slope protection, 17:6565 (RA;US)
Recent developments in particulate control with low-rank fuels, 17:6231 (RA;US)
The toxicity of particles from combustion processes, 17:7801 (R;US)
Utilization of low-rank coal fly ash in high applications at a North Dakota power station, 17:6564 (RA;US)

FOAMS
See also PLASTIC FOAMS
Low density metal hydride foams, 17:6987 (PA;US)
Low-density carbonized resorcinol-formaldehyde foams: Final report, 17:7035 (R;US)

FOCUSING
The device for bunch selffocusing, 17:7377 (RA;JP)

FOILS
Effects of preheat on mix in laser accelerated planar foils, 17:8173 (R;US)
Fiber optic mounted laser driven flyer plates, 17:7159 (PA;US)

FOOD
See also FRUITS

Iodine 131
Investigation and evaluation of total radioactivities and the radioactive nuclides of ^{131}I, ^{134,137}Cs in the food and environment in Suzhou city, 17:7740 (R;CN;In Chinese)

Irradiation
Application of irradiation techniques to food and foodstuffs, 17:7734 (R;KR;In Korean)
Facts about food irradiation: Chemical changes in irradiated foods, 17:7724 (I;XA)
Facts about food irradiation: Food irradiation and radioactivity, 17:7723 (I;XA)
Facts about food irradiation: Genetic studies, 17:7726 (I;XA)
Facts about food irradiation: Irradiated foods and the consumer, 17:7733 (I;XA)
Facts about food irradiation: Irradiation and food additives and residues, 17:7729 (I;XA)
Facts about food irradiation: Irradiation and food safety, 17:7728 (I;XA)
Facts about food irradiation: Microbiological safety of irradiated food, 17:7727 (I;XA)
Facts about food irradiation: Nutritional quality of irradiated foods, 17:7725 (I;XA)
Facts about food irradiation: Packaging of irradiated foods, 17:7730 (I;XA)
Facts about food irradiation: Scientific and technical terms, 17:7722 (I;XA)

Irradiation Plants
Facts about food irradiation: Controlling the process, 17:7731 (I;XA)

Packaging
Facts about food irradiation: Packaging of irradiated foods, 17:7730 (I;XA)

Radicidation
Facts about food irradiation: Status and trends, 17:7721 (I;XA)
Food irradiation newsletter. Vol. 15, no. 2, 17:7720 (I;XA)

Radioactivity
Investigation and evaluation of total radioactivities and the radioactive nuclides of ^{131}I, ^{134,137}Cs in the food and environment in Suzhou city, 17:7740 (R;CN;In Chinese)

Radiodisinfestation
Food irradiation newsletter. Vol. 15, no. 2, 17:7720 (I;XA)

Radurization
Facts about food irradiation: Status and trends, 17:7721 (I;XA)

Sampling
Environmental surveillance master sampling schedule, 17:7560 (R;US)

FOOD IRRADIATION
See FOOD PROCESSING
IRRADIATION

FOOD PROCESSING
Proposals for the Food (Control of Irradiation) Regulations 1990, 17:7719 (I;GB)
Proposed Food (Control of Irradiation) Regulations 1990, 17:6483 (I;GB)

FOODSTUFFS
See FOOD

FORM FACTORS
Good component approach in light-cone quantum mechanics of the deuteron form-factors, 17:7972 (R;US)

FORMALDEHYDE
Kinetics and dynamics of oxidation reactions involving an adsorbed CO species on bulk and supported platinum and copper-oxide: First year annual report, January 1, 1991–December 31, 1991, 17:7545 (R;US)

FORMALIN
See FORMALDEHYDE

FORMALITH
See FORMALDEHYDE

FORMATES
Kinetic analysis of radiation- and thermostimulated reactions of iron formates, 17:7124 (IA;SU;In Russian)

FORMIC ACID
The interaction of formic acid with Pt(111) and the effect of coadsorbed water, atomic oxygen, and carbon monoxide, 17:7084 (R;US)

FORMIC ALDEHYDE
See FORMALDEHYDE

FORMOL
See FORMALDEHYDE

FORTISSIMO REACTOR

FREE ELECTRON LASERS
40-Å FEL designs for the PEP storage ring, 17:7371 (R;US)
Achromatic and isochronous electron beam transport for tunable free electron lasers, 17:7282 (R;US)
Double beam free electron laser, 17:8211 (R;SE)
Electron beam optics for the FEL experiment and IFEL experiment, 17:7259 (R;US)
Free electron lasers: Contributions to 12th international conference, 17:7208 (R;IT)
Intensity saturation mechanism in free electron lasers, 17:7204 (R;IT)
MOPA FEL Stanford experiment: Simple analysis, 17:7210 (R;IT)
Observation of coherent mm wave radiation from microtron driven Cherenkov FEL, 17:7202 (R;IT)
Performance of hole coupling resonator in the presence of asymmetric modes and FEL gain, 17:7360 (R;US)
Photoemission using femtosecond laser pulses, 17:7296 (R;US)
Proceedings of the Tokyo international symposium '90 on free electron lasers, 17:7327 (R;JP)
Simple model of gain saturation in free electron lasers, 17:7206 (R;IT)
Towards generalized version of Madey's theorem, 17:7203 (R;IT)
XUV FELs by harmonics amplification: Parametric analysis in two-undulator schemes, 17:7267 (R;IT)
FREE RADICALS
See RADICALS
FREQUENCY (EIGEN)
See EIGENFREQUENCY
FREQUENCY MODULATION
Suppression of adjacent-channel and cochannel FM interference via extended Kalman filtering, 17:7859 (R;US)
FRESH WATER ECOSYSTEMS
See AQUATIC ECOSYSTEMS
FRJ-2 REACTOR
New components for the neutron spectrometer SV5c at the 10H channel of the research reactor FRJ2, 17:7444 (R;DE;In German)
FRUIT (SEEDS)
See SEEDS
FRUIT FLIES
See also CERATITIS CAPITATA
Gamma radiation effects over pupae of several ages from Anastrepha fraterculus (Wied., 1830) (Diptera: Tephritidae), 17:7713 (IA;BR;In Portuguese)
Gamma radiation use in mangoes disinfestation for exporting in relation of Ceratitis capitata, Anastrepha fraterculus and Anastrepha obliqua larvas, 17:7716 (IA;BR;In Portuguese)
FRUITS
See also MANGOES
Disinfestation of Averrhoa carambola infested by Anastrepha obliqua (Mac., 1831) (Diptera, Tephritidae) by gamma radiation, 17:7718 (IA;BR;In Portuguese)
FT TOKAMAK
Analysis of satured ohmic confinement in FT tokamak, 17:8256 (R;IT)
ENEA-Frascati inertial confinement fusion: Multi-channel digitizer control, acquisition and analysis system, 17:8334 (R;IT)
Energy confinement scaling laws for FT ohmic plasma, 17:8241 (RA;IT)
Propagation absorption and particle dynamics of ion-Bernstein wave in tokamaks, 17:8250 (RA;IT)
Sawtooth repetition time scaling from reduced MHD simulations: Comparison with FT experiment, 17:8253 (R;IT)
FUEL ADDITIVES
Process development of mild gasification for midwestern bituminous and western low-rank coals, 17:6125 (RA;US)
FUEL ASSEMBLIES
See also FUEL ELEMENT CLUSTERS
Fluid flow test for KMRR fuel assemblies, 17:6692 (R;KR;In Korean)
FUEL BUNDLES

HEAVY WATER COOLED REACTORS
See also FRJ-2 REACTOR
GTRR REACTOR
JRR-2 REACTOR
PRTR REACTOR
Application of the successive linear programming technique to the optimum design of a high flux reactor using LEU fuel, 17:6594 (R;US)
Worldwide advanced nuclear power reactors with passive and inherent safety: What, why, how, and who, 17:6751 (R;US)

HECTORITE
See MONTMORILLONITE

HEISENBERG MODEL
Lax representation does not mean complete integrability, 17:7833 (R;XA)

HELA CELLS
The molecular basis for uv response of cultured human cells, 17:7745 (R;US)

HELAC
See LINEAR ACCELERATORS

HELIOSTATS
Static load testing of a heliostat drive, 17:6534 (R;US)

HELIUM
Single photon double ionization of helium, 17:8155 (R;XA)
The design, construction and applications of a novel double-axi helium atom spectrometer, 17:8193 (R;US)

HELIUM 3
Few-body experimental program at CEBAF, 17:7967 (R;US)

HELIUM 4
A compact copper nuclear demagnetization cryostat and a search for superfluidity in solid ^{4}He, 17:8154 (I;NL)
Few-body experimental program at CEBAF, 17:7967 (R;US)

HELIUM 4 REACTIONS
See ALPHA REACTIONS

HELIUM 4 TARGET
Field theoritic study of the properties of ^{4}He: a variational approach, 17:8092 (IA;IN)
Glauber theory of high-energy p-He scattering with composite nucleons, 17:8119 (R;SU)

HELIUM 6
On the controversy of $B_{\Lambda\Lambda}$ data of $_{\Lambda\Lambda}{}^6$He and $_{\Lambda}$-Λ^{10}Be, 17:8016 (IA;IN)

HERA STORAGE RING
Calibration of the electromagnetic part of the ZEUS calorimeter with electrons, 17:7396 (R;DE;In German)
Construction of a test facility for the readout electronics of the ZEUS calorimeter, 17:7395 (R;DE;In German)
Studies on the space-drift time relation in the inhomogeneous magnetic field in the planar drift chambers of the ZEUS detector, 17:7401 (R;DE;In German)
The uranium calorimeter of the ZEUS detector - studies on the uniformity of the energy measurement of electrons, 17:7394 (R;DE;In German)

HEREDITY
See GENETICS

HEROIN
Fiber optic detector, 17:7487 (PA;US)

HEXAHYDROPYRIDINES
See PIPERIDINES

HEXANE
Hemial recombination of electron-ion pairs in irradiated tri-n-butyl phosphate and its mixtures with hexane: an empirical approach, 17:7108 (IA;SU;In Russian)
Radiation-chemical behaviour and spectroscopic characteristics of solvated electrons in some trialkyl phosphates, 17:7109 (IA;SU;In Russian)

HFIR REACTOR
Calculation of critical experiment parameters for the High Flux Isotope Reactor, 17:6673 (R;US)
Development of High Flux Isotope Reactor (HFIR) subcriticality monitoring methods, 17:6651 (R;US)
Monitoring nuclear reactor systems using neural networks and fuzzy logic, 17:6652 (R;US)

HGI2 SEMICONDUCTOR DETECTORS
Growth and characterization of monocrystals from HgI_2 semiconductor compound for using in X and gamma spectroscopy, 17:7004 (I;BR;In Portuguese)
The effect of charge trapping on the spectrometric performance of HgI_2 gamma detectors, 17:7416 (R;US)

HIGGS BOSONS
Electroweak phase transitions, 17:7923 (R;US)

HIGH ENERGY PHYSICS
HEPLIB '91: International users meeting on the support and environments of high energy physics computing, 17:7869 (R;US)
High energy physics program at Texas A and M University: Annual report, April 1, 1991–March 31, 1992, 17:7867 (R;US)
Northwestern University technical progress reports, December 1, 1990–November 30, 1991, 17:7866 (R;US)

HIGH ENERGY RADIOTHERAPY

HIGH-LEVEL RADIOACTIVE WASTES
Approach to improved safety of high-level radioactive waste storage by the US Department of Energy, 17:6372 (R;US)
Areal power density: A preliminary examination of underground heat transfer in a potential Yucca Mountain repository and recommendations for thermal design approaches: Yucca Mountain Site Characterization Project (YUCCA MOUNTAIN PROJECT), 17:6426 (R;US)
Calculation of experiment uncertainty in laboratory determination of several geoengineering properties of tuffs from Yucca Mountain, Nevada: Yucca Mountain Site Characterization Project (Yucca Mountain Project.), 17:6423 (R;US)
Corrosion models for predictions of performance of high-level radioactive-waste containers, 17:7173 (R;US)
Documentation and verification of STRES3D, Version 4.0: Yucca Mountain Site Characterization Project (YUCCA MOUNTAIN PROJECT), 17:6427 (R;US)
Documentation and verification of the SHAFT code: Yucca Mountain Site Characterization Project (YUCCA MOUNTAIN PROJECT), 17:6424 (R;US)
Drift design methodology and preliminary application for the Yucca Mountain Site Characterization Project: Yucca Mountain Site Characterization Project (YUCCA MOUNTAIN PROJECT), 17:6425 (R;US)
Engineered barrier system and waste package design concepts for a potential geologic repository at Yucca Mountain, 17:6441 (R;US)
Physical limits on steam generation by radioactive decay heat, 17:6439 (R;US)
Process for the recovery of strontium from acid solutions, 17:6416 (PA;US)
Radioactive waste management profiles: Compilation of data from the Waste Management Data Base (WMDB), 17:6386 (R;XA)
Research program to develop and validate conceptual models for flow and transport through unsaturated, fractured rock:

Yucca Mountain Site Characterization Project (YUCCA MOUNTAIN PROJECT), 17:6428 (R;US)
Retrieval strategy report for a potential high-level nuclear waste repository: Yucca Mountain Site Characterizadtion Project, 17:6422 (R;US)
Site characterization progress report: Yucca Mountain, Nevada, October 1, 1990–March 31, 1991: Number 4, 17:6379 (R;US)
Survey of degradation modes of four nickel-chromium-molybdenum alloys, 17:6956 (R;US)
Systems engineering study for the closure of single-shell tanks: Draft A, Volume 3, 17:6464 (R;US)
WIPP small scale seal performance tests: Status and impacts, 17:6436 (R;US)

HIGH-TC SUPERCONDUCTORS
A study on the development of high Tc superconducting materials, 17:8202 (R;KR;In Korean)
A study on the development of high Tc superconducting materials and on the effects of neutron irradiation, 17:8201 (R;KR;In Korean)
Ac losses in $YBa_2Cu_3O_7$ and $Bi_2Sr_2Ca_2Ci_3O_{10}$ superconductors at power frequencies, 17:6763 (R;US)
Far infrared conductivity of charge density wave materials and the oxygen isotope effect in high-T_c superconductors, 17:7014 (R;US)
Flux flow, pinning, and resistive behavior in superconducting networks: Final progress report, May 1, 1989–April 30, 1992, 17:8197 (R;US)
Grain boundary microstructure and transport critical current density in $YBa_2Cu_3O_x$, 17:6959 (R;US)
Neutron spectroscopic investigation of high temperature superconductors, 17:8206 (R;CH;In German)
On the combination of the Cooper pair and the Ogg pair in the high-T_c oxide superconductor, 17:8199 (R;XA)
The effect of processing parameters during heat treatment of bulk high-$T_c$superconductors, 17:6958 (R;US)
Tunneling in cuprate and bismuthate superconductors, 17:6963 (R;US)
Use of energetic ion beams in materials synthesis and processing, 17:6993 (R;US)

HIGH-VOLTAGE PULSE GENERATORS
High current transistor pulse generator, 17:7365 (R;US)

HILBERT SPACE
Joint maximal numerical range, 17:7844 (R;XA)
On the spectrum of elementary type operator, 17:7843 (R;XA)

HISTONES
Mechanisms for radiation damage in DNA: Progress report, June 1, 1991–May 31, 1992, 17:7102 (R;US)

HODOSCOPES
Associated-particle sealed-tube neutron generators and hodoscopes for NDA applications, 17:7389 (R;US)
New radiation hodoscope developments for Arms Control Treaty verification, 17:7388 (R;US)

HOG FUEL
See WOOD WASTES

HOLMIUM 161
Measurement of K electron capture decay probability in ^{161}Ho, ^{125}I and ^{131}Ba, 17:8043 (IA;IN)

HOT CELLS
Modification of hot cells for general purpose heat source assembly at the Radioisotope Power Systems Facility: Revision 1, 17:6497 (R;US)

HOT GAS CLEANUP
High-temperature membranes for H_2S and SO_2 separations, 17:6159 (RA;US)
Mechanistic and kinetic studies of high-temperature coal gas desulfurization sorbents, 17:6158 (RA;US)
Wilsonville Hot Gas Cleanup Test Facility, 17:6123 (RA;US)

HOT PLASMA
Measurements and models of the opacity of hot, dense plasma, 17:8317 (R;US)

HOT WATER
Evaluation of the computerized utilities energy monitoring and control system installed at the US Military Community at Goeppingen, Germany, 17:6871 (R;US)

HOT WATER HEATERS
See WATER HEATERS

HOT-DRY-ROCK SYSTEMS
Orientation of minimum principal stress in the hot dry rock geothermal reservoir at Fenton Hill, New Mexico, 17:6543 (R;US)

HT-6B TOKAMAK
LHCD experiment on the HT-6B tokamak, 17:8276 (RA;XA)

HTGR TYPE REACTORS
Accident simulation and consequence analysis in support of MHTGR safety evaluations, 17:6708 (R;US)
Developmental work for the steam generators and the NWA-heat exchangers of the HTR-500 reactor, 17:6588 (R;CH;In German)
Fission-gas release during hydrolysis of exposed fuel kernels, 17:6589 (RA;XA)
MHTGR steam generator on-line heat balance, instrumentation and function, 17:6656 (R;US)
MORECA: A computer code for simulating modular high-temperature gas-cooled reactor core heatup accidents, 17:6747 (R;US)
Preliminary safety assessment of the 450 MWT MHTGR, 17:6591 (RA;XA)
Worldwide advanced nuclear power reactors with passive and inherent safety: What, why, how, and who, 17:6751 (R;US)

HUGENHOLTZ-PINES THEORY
See HYDROGEN

HUMAN CELLS
See ANIMAL CELLS

HUMAN FACTORS
A study on the human factors of nuclear power plants man-machine interface, 17:6657 (R;KR;In Korean)

HUMAN INTRUSION
Interior intrusion detection systems, 17:6477 (R;US)
THIEF: An interactive simulation of nuclear materials safeguards and security, 17:6473 (R;US)

HUMAN POPULATIONS

On some new integral differential inequalities of Gronwall-Bellman-Bihari type, 17:7846 (R;XA)

INTEGRATED CIRCUITS
Soft x-ray projection lithography system design and cost analysis, 17:7235 (R;US)

INTERAGENCY COOPERATION
Refrigeration systems program summary, 17:6842 (R;US)

INTERCALATES
See CLATHRATES

INTERFACES
Equilibrium and non-equilibrium metal-ceramic interfaces, 17:6896 (R;US)
Interdiffusion and grain-boundary migration in Au-Cu bilayers during ion-irradiation, 17:6893 (R;US)
Numerical simulation of accelerated interfaces, 17:8172 (R;US)
Specular and diffuse x-ray scattering from surfaces and interfaces, 17:8182 (R;US)

INTERFACES (EQUIPMENT)
See EQUIPMENT INTERFACES

INTERMEDIATE VECTOR BOSONS
See also W MINUS BOSONS
W PLUS BOSONS
Z NEUTRAL BOSONS
Direct production of high p_t leptons and search for additional heavy bosons at 1.8 TeV, 17:7945 (R;US)
Superspace WZW models and black holes, 17:7894 (R;US)

INTERMEDIATE-LEVEL RADIOACTIVE WASTES
MAW and HTR-FE experimental disposal in boreholes. Study of radiation, corrosion resistance and long-term performance of instruments and electrical components under simulated in situ conditions in salt, 17:6391 (R;DE;In German)
Radioactive waste management profiles: Compilation of data from the Waste Management Data Base (WMDB), 17:6386 (R;XA)

INTERMETALLIC COMPOUNDS
Superplasticity in intermetallic compounds and structural ceramics, 17:6953 (RA;US)

INTERNAL MEDICINE
See MEDICINE

INTERNATIONAL ATOMIC ENERGY AGENCY
See IAEA

INTERPLANETARY SPACE
National security uses of space: Status, prospects, and issues, 17:7536 (R;US)

INTERPOLATION
Three-dimensional operational interpolation, 17:8408 (R;US)

INTERSECTING BEAMS
See COLLIDING BEAMS

INTRUSION DETECTION SYSTEMS
Interior intrusion detection systems, 17:6477 (R;US)

INVENTORIES
A nuclear material sampling plan, 17:6480 (R;US)

IODATES
Radiation-induced processes in α-LiIO$_3$, 17:7120 (IA;SU;In Russian)

IODINE 125
Measurement of K electron capture decay probability in ^{161}Ho, ^{125}I and ^{131}Ba, 17:8043 (IA;IN)

IODINE 127 TARGET
The evaluation of ^{127}I(n,2n)^{126}I reaction, 17:8090 (RA;XA)

IODINE 131
Therapeutic room for iodine therapy medical and operational, maintenance and radiation control, 17:7764 (IA;BR)

ION BEAM TARGETS
High gain ICF implosion symmetry requirements, 17:8338 (R;IT)
Rayleigh-Taylor instability on high gain target for heavy ion beam fusion, 17:8336 (R;IT)

ION BEAMS
See also CARBON 12 BEAMS
DEUTERON BEAMS
HYDROGEN 1 MINUS BEAMS
OXYGEN 16 BEAMS
SILICON 28 BEAMS
A Stripline Fast Faraday Cup for measuring GHz structure of ion beams, 17:7363 (PA;US)
A new technique for ion beam tritium labelling, 17:7131 (R;CN;In Chinese)
Stochastic cooling with a double rf system, 17:7258 (R;US)

ION CLUSTERS
See ION PAIRS

ION CYCLOTRON-RESONANCE HEATING
See ICR HEATING

ION EXCHANGE MATERIALS
Anion-exchange resin-based desulfurization process, 17:6241 (RA;US)
Grout-based waste forms for the solidification of anion-exchange resins: Final report, 17:6397 (R;US)

ION EXCHANGE MEMBRANES
See ION EXCHANGE MATERIALS
MEMBRANES

ION IMPLANTATION
Ion beam synthesis of nitride layers in iron, 17:8187 (I;NL)

ION MICROSCOPY
Atom probe field ion microscopy and related topics: A bibliography 1990, 17:7507 (R;US)

ION PAIRS
Hemial recombination of electron-ion pairs in irradiated tri-n-butyl phosphate and its mixtures with hexane: an empirical approach, 17:7108 (IA;SU;In Russian)
Photoexcited charge pair escape and recombination: Progress report, November 15, 1990–November 14, 1991, 17:7099 (R;US)

ION PLASMA WAVES
Propagation absorption and particle dynamics of ion-Bernstein wave in tokamaks, 17:8250 (RA;IT)

ION SOURCES
See also DUOPLASMATRONS
Development of a dc low pressure D$^-$ surface-conversion source using a 10-cm-diameter solid barium converter, 17:8364 (R;US)
Status of ISOL facility at VECC, 17:7317 (IA;IN)

ION TEMPERATURE
Eccentric operation modes in small tori and their physics, 17:8272 (RA;XA)

Energy confinement and coupling of transport process with MHD modes, 17:8262 (RA;XA)
Ion heating and MHD dynamo fluctuations in the reversed field pinch, 17:8225 (R;US)

ION-ATOM COLLISIONS
Atomic physics with highly charged ions: Progress report, FY 1989–91, 17:8143 (R;US)
Ionization of hydrogen by a relativistic heavy projectile, 17:8146 (R;DE)
Multicharged ion-atom collisions: Application for tokamak edge plasma physics, 17:8278 (RA;XA)

IONIC REACTIONS
See IONS

IONIZATION CALORIMETERS
See SHOWER COUNTERS

IONIZATION CHAMBERS
Comparison of factors given in ICRU Report 23 and IAEA TRS 277 for converting from exposure/air kerma to absorbed dose to water for medium energy X-rays, 17:7788 (R;GB)

IONIZATION LOSS
See ENERGY LOSSES

IONIZING RADIATIONS
See also COSMIC RADIATION
GAMMA RADIATION
X RADIATION
Ionizing radiation risk assessment, BEIR IV, 17:6461 (R;US)
Usefulness and reliability of available epidemiological study results in assessments of radiation-related risks of cancer. Pt. 4. Radiation-related risk of cancer of the thyroid, 17:7738 (R;DE;In German)

IONOPHORESIS

Power engineering constructions: Project design procedure, 17:6572 (I;CS;In Czech)

Power Generation

Economic analysis of nuclear power generation, 17:6625 (R;KR;In Korean)

Energy production using fission fragment rockets, 17:6699 (R;US)

West European nuclear power generation research and development, 17:6627 (R;US)

Radioactive Effluents
The migration, accumulation and distribution of ^{59}Fe in rice plants and soils, 17:7567 (R;CN;In Chinese)
Radioactive Waste Processing
Discharges from nuclear power stations, 17:6662 (R;GB)
Reactor Accidents
Experiments to investigate the effect of flight path on direct containment heating (DCH) in the Surtsey test facility: The Limited Flight Path (LFP) tests, 17:6748 (R;US)
Reactor Licensing
Analysis of public comments on the proposed rule on nuclear power plant license renewal, 17:6621 (R;US)
Foundation for the adequacy of the licensing bases: A supplement to the statement of considerations for the rule on nuclear power plant license renewal (10 CFR Part 54): Final report, 17:6620 (R;US)
NRC Regulatory Agenda: Quarterly report, July–September 1991: Volume 10, No. 3, 17:6615 (R;US)
Regulatory analysis for final rule on nuclear power plant license renewal: Final report, 17:6617 (R;US)
Screening of generic safety issues for license renewal considerations, 17:6744 (R;US)
Reactor Maintenance
Good practices for outage management in nuclear power plants, 17:6569 (R;XA)
Reactor Monitoring Systems
Towards the development of multilevel-multiagent diagnostic aids, 17:6659 (R;US)
Reactor Operation
Licensee Event Report (LER) compilation for month of September 1991, 17:6622 (R;US)
Licensee Event Report (LER) compilation for the month of October 1991: Volume 10, No.10, 17:6623 (R;US)
Reactor Safety
Status of safety issues at licensed power plants: TMI action plan requirements, unresolved safety issues, generic safety issues: Supplement 1, 17:6742 (R;US)
Regulations
Resolving the problem of compliance with the ever increasing and changing regulations: Revision 1, 17:6624 (R;US)
Restraints
Snubber aging assessment: Results of NPAR Phase 2 in-plant research, 17:6644 (R;US)
Risk Assessment
Procedures guide for extracting and loading probabilistic risk assessment data into MAR-D using IRRAS 2.5, 17:6745 (R;US)
Safety
ASSET guidelines. Revised 1991 Edition: Reference material prepared by the International Atomic Energy Agency for Assessment of Safety Significant Events Teams, 17:6571 (R;XA)
Safety Reports
ASSET guidelines. Revised 1991 Edition: Reference material prepared by the International Atomic Energy Agency for Assessment of Safety Significant Events Teams, 17:6571 (R;XA)
Technology Assessment
West European nuclear power generation research and development, 17:6627 (R;US)
Thermocouples
Nuclear qualified in-containment electrical connectors and methods of connecting electrical conductors, 17:6753 (PA;US)
NUCLEAR POWER STATIONS

HYDROCARBONS
ORGANIC NITROGEN COMPOUNDS
ORGANIC POLYMERS
ORGANIC SULFUR COMPOUNDS
ORGANOMETALLIC COMPOUNDS
TERPENES
The effect of processing parameters during heat treatment of bulk high-$T_c$superconductors, 17:6958 (R;US)
The separation of particulates from supercritical water oxidation processes, 17:7614 (R;US)
Thermodynamic functions of ethylgermane and ethylsilane from spectroscopic data, 17:7080 (R;XA)
ORGANIC IODINE COMPOUNDS
Investigations into the occurrence of penetrating iodine species. Pt. 2, 17:7130 (RA;DE;In German)

ORGANIC MATTER
Organic and inorganic hazardous waste stabilization using combusted oil shale, 17:6318 (R;US)
ORGANIC NITROGEN COMPOUNDS
See also HYDRAZONES
IMIDES
NITRO COMPOUNDS
Characterization of organic nitrogen in IBCSP coals: Final technical report, September 1, 1990–August 31, 1991, 17:6228 (R;US)
ORGANIC POLYMERS
See also PLASTIC FOAMS
POLYVINYLS
RESINS
RUBBERS
THERMOPLASTICS
Equipment for production of Radplast products, their basic characteristics and selection, 17:6489 (IA;SU;In Russian)
Radiation optical stability of polymer materials, 17:7007 (IA;SU;In Russian)
ORGANIC SOLVENTS
The effect of selective solvent absorption on coal conversion, 17:6147 (RA;US)
ORGANIC SULFUR COMPOUNDS
See also SULFONIC ACIDS
THIOCYANATES
THIOLS
Combined chemical and microbiological removal of organic sulfur from coal: Technical report, September 1, 1990–August 31, 1991, 17:6187 (R;US)
The effect of moderate coal cleaning on microbial removal of organic sulfur: Final technical report, September 1, 1990–August 31, 1991, 17:6113 (R;US)
ORGANIC SUPERCONDUCTORS
Syntheses and properties of κ-phase organic superconductors, 17:7030 (R;US)
ORGANIC WASTES
Destruction of organic wastes with molten oxidizers, 17:6866 (PA;US)
ORGANOMETALLIC COMPOUNDS
Synthesis and chemistry of cationic d^0 metal alkyl complexes: Progress report, July 1988–May 1991, 17:7075 (R;US)
Synthesis and chemistry of yttrium and lanthanide metal complexes: Progress report, March 15, 1991–March 14, 1992, 17:7069 (R;US)
ORNL
Annual summary report of the decontamination and decommissioning surveillance and maintenance program at Oak Ridge National Laboratory for period ending September 30, 1991, 17:6593 (R;US)
Annual summary report on surveillance and maintenance activities of the surplus contaminated facilities program at Oak Ridge National Laboratory for period ending September 30, 1991, 17:6462 (R;US)
Environmental surveillance data report for the fourth quarter of 1990, 17:7586 (R;US)
Floodplain and wetlands assessment of the White Oak Creek Embayment, 17:7821 (R;US)
Fossil Energy Program semiannual progress report, April 1990–September 1990, 17:6194 (R;US)
ORNL '90, 17:6795 (R;US)
Oak Ridge National Laboratory's philosophy and approach to NEPA, 17:6779 (R;US)
PCB annual report for Oak Ridge National Laboratory EPA Identification Number - TN 1890090003, February 6, 1990–December 31, 1990, 17:7587 (R;US)
Recycling and resource recovery at Oak Ridge National Laboratory, 17:6374 (R;US)
OSCILLATIONS

PHAEDRUS MIRROR DEVICES
Experimental investigations of ICRF effects: Annual performance report, November 1990–June 1991, 17:8331 (R;US)
PHAGES
See BACTERIOPHAGES
PHANTOMS
Water solid simulator, 17:7436 (IA;BR;In Portuguese)
PHARMACEUTICALS
See DRUGS
PHASE STUDIES
Investigation of the kinetics of γ-2 phase precipitation in highly cold worked FeCo-2%V, 17:6917 (I;BR;In Portuguese)
PHASE TRANSFORMATIONS
See also EVAPORATION
Method and apparatus for acoustic plate mode liquid-solid phase transition detection, 17:7512 (PA;US)

PHENANTHRENE
Control of catalytic hydrotreating selectivity with ammonia: Quarterly report, July 1, 1991–September 30, 1991, 17:6172 (R;US)
PHENOL
[Clusters: Elucidating the dynamics of ionization events and ensuing reactions in the condensed phase]: Brief summary of accomplishments, 17:7045 (R;US)
[High resolution Raman spectroscopy of complexes and clusters in molecular beams]: Progress report, 17:8138 (R;US)
[High-resolution Raman spectroscopy of complexes and clusters in molecular beams]: Progress report, 17:8137 (R;US)
PHENOLS
See also PHENOL
Fundamental studies of catalytic processing of synthetic liquids, 17:6135 (RA;US)
High resolution Raman spectroscopy of complexes and clusters in molecular beams: Performance report, 17:8139 (R;US)
Preconversion catalytic deoxygenation of phenolic functional groups, 17:6136 (RA;US)
SRC-I computer model, 17:6107 (R;US)
PHOSPHATE GLASS
Ammonia-treated phosphate glasses useful for sealing to metals, 17:7022 (PA;US)
Simplified relations for the calculations of energy loss rate and range of heavy ions in phosphate and quartz glass detectors, 17:7441 (IA;IN)
PHOSPHATE MINERALS
Natural radionuclides in phosphatic fertilizer and their behaviour of absoption and accumulation in soils and crops, 17:7568 (R;CN;In Chinese)
PHOSPHATES
See also COPPER PHOSPHATES
Chemical, structural and magnetic studies of new mono- and diphosphates appearing in ternary diagrams AO-CuO-(P_2O_5); A= Mg, Ca, Sr, Ba, 17:7083 (I;MA;In French)
PHOSPHINES
Preconversion catalytic deoxygenation of phenolic functional groups: Quarterly technical progress report, April 1, 1991–June 30, 1991, 17:6171 (R;US)
PHOSPHONATES
Supercritical fluid extraction and organic solvent microextraction of chemical agent simulants from soil, 17:7571 (R;US)
PHOSPHONIC ACIDS
Thermally unstable complexants: Stability of lanthanide/actinide complexes, thermal instability of the ligands, and applications in actinide separations, 17:6367 (R;US)
PHOSPHORIC ACID ESTERS
Effect of gamma-irradiation and temperature on isomer composition of triisoamyl phosphate and its destruction products, 17:7111 (IA;SU;In Russian)
Radiation-chemical behaviour and spectroscopic characteristics of solvated electrons in some trialkyl phosphates, 17:7109 (IA;SU;In Russian)
PHOSPHORS
Fiber-sensor design for turbine engines, 17:6873 (R;US)
PHOSPHORUS
Tritium diffusion in electrotechnical phosphorus with different degrees of radiative damage, 17:8188 (IA;SU;In Russian)
PHOSPHORUS 30
Proton resonance spectroscopy: Progress report, December 1, 1990–November 30, 1991, 17:8059 (R;US)
PHOSPHORUS 31
Chemical characterization of the surface sites of coal: Final report, 17:6222 (R;US)
PHOSPHORUS COMPOUNDS
See also PHOSPHATES
PHOSPHINES
Preconversion catalytic deoxygenation of phenolic functional groups: Quarterly technical progress report, April 1, 1991–June 30, 1991, 17:6171 (R;US)
PHOTOCATHODES
Infrared-sensitivie photocathodes, 17:7227 (RA;US)
PHOTODIODES
Characterization of a detector base on semiconductor for using in beams of x-ray till 100kv, 17:7437 (IA;BR;In Portuguese)
PHOTODISINTEGRATION
See PHOTONUCLEAR REACTIONS
PHOTOIONIZATION
Rotationally resolved threshold photoionization of H_2S, 17:7065 (R;US)
Single photon double ionization of helium, 17:8155 (R;XA)
PHOTOMAGNETIC EFFECT
See MAGNETIC SUSCEPTIBILITY
PHOTOMAGNETOELECTRIC EFFECT
See MAGNETIC FIELDS
PHOTON BEAMS
Construction and test of an apparatus for the measurement of the photon-definition probability at the SAPHIR experiment, 17:7405 (R;DE;In German)
PHOTON DETECTION (GAMMA)
See GAMMA DETECTION
PHOTON DETECTION (X-RAY)
See X-RAY DETECTION
PHOTON-NUCLEON INTERACTIONS
Compton scattering on hadronic systems, 17:8110 (R;DE;In German)
PHOTON-PHOTON INTERACTIONS
Odderon - A sharp signal at HERA, 17:7947 (R;XA)
PHOTONS
See also COSMIC PHOTONS
Energy distribution of muon pairs and photon pairs in relativistic heavy ion collisions, 17:8101 (IA;IN)
PHOTONUCLEAR REACTIONS
Compton scattering on hadronic systems, 17:8110 (R;DE;In German)
PHOTOPRODUCTION
Measurement of the differential cross section of the reaction $\gamma p \rightarrow \pi^+ n$ at the energy-tagged photon beam of the PHOENICS experiment, 17:7932 (R;DE;In German)
PHOTOVOLTAIC CELLS
See also SOLAR CELLS
A study of potential high band-gap photovoltaic materials for a two step photon intermediate technique in fission energy conversion: Progress report for year one, December 1, 1990–November 30, 1991, 17:6997 (R;US)
PHOTOVOLTAIC CONVERSION
Photovoltaics as a worldwide energy option: A case study in development strategy, 17:6517 (R;US)

After-Heat Removal
Analysis of operating experience data in nuclear power plants: Loss of decay heat removal during reactor shutdown, 17:6581 (R;JP;In Japanese)

Containment
Initial performance assessment of the Westinghouse AP600 containment design and related safety issues, 17:6758 (R;US)

Fuel Elements
AIROX dry reprocessing of uranium oxide fuels, 17:6335 (R;US)
Fission product release and fuel behavior of irradiated light water reactor fuel under severe accident conditions: The ACRR ST-1 Experiment, 17:6666 (R;US)
Thermal performance of a buried nuclear waste storage container storing a hybrid mix of PWR and BWR spent fuel rods: Revision 1, 17:6438 (R;US)

Fuel Pins
Calculation of fuel pin failure timing under LOCA conditions, 17:6716 (R;US)
Comparison of SCDAP/RELAP5/MOD3 to TRAC-PF1/MOD1 for timing analysis of PWR fuel pin failures, 17:6714 (R;US)

Loss Of Coolant
Advanced LOCA code uncertainty assessment: preliminary calculations for Westinghouse 4 loop PWR, 17:6586 (R;CH)
Calculation of fuel pin failure timing under LOCA conditions, 17:6716 (R;US)
PaRaELAP: Realtime multiprocessing RELAP5, 17:6715 (R;US)
THEXSYST - a knowledge based system for the control and analysis of technical simulation calculations, 17:8397 (R;DE;In German)
Water-hammer in the cold leg during an SBLOCA due to cold ECCS injection, 17:6713 (R;US)

Meltdown
Summary of a workshop on severe accident management for PWRs, 17:6750 (R;US)

Pressure Vessels
Nuclear reactor pressure vessel flaw distribution development: Phase 2, Methodology and application, 17:6587 (R;US)

Radioactivity Transport
Crud and film program status report, 17:6664 (R;US)

Reactor Accidents
Calculation of absorbed doses to water pools in severe accident sequences, 17:6667 (R;US)

Reactor Control Systems
The slightly-enriched spectral shift control reactor: Final report, September 30, 1988–September 30, 1991, 17:6653 (R;US)

Reactor Cooling Systems
Crud and film program status report, 17:6664 (R;US)

Reactor Operation
Licensee Event Report (LER) compilation for month of September 1991, 17:6622 (R;US)
Licensee Event Report (LER) compilation for the month of October 1991: Volume 10, No.10, 17:6623 (R;US)
Steam generator operating experience, update for 1989–1990, 17:6585 (R;US)

Reactor Safety
An approach for assessing ALWR passive safety system reliability, 17:6755 (R;US)
Failure of PWR-RHRS under cold shutdown conditions: Experimental results from the PKL test facility, 17:6743 (RA;US)
Worldwide advanced nuclear power reactors with passive and inherent safety: What, why, how, and who, 17:6751 (R;US)

Research Programs
KfK, Institute for Reactor Development. Results of research and development activities in 1990, 17:6573 (R;DE;In German)

Rhr Systems
Failure of PWR-RHRS under cold shutdown conditions: Experimental results from the PKL test facility, 17:6743 (RA;US)

Steam Generators
Steam generator operating experience, update for 1989–1990, 17:6585 (R;US)

PYRIDINE
Fundamental studies of water pretreatment of coal: Seventh quarterly report, April 1, 1991–June 30, 1991, 17:6176 (R;US)

PYRITE
Control of pyrite surface chemistry in physical coal cleaning, 17:6104 (RA;US)
Electrochemistry of Thiobacillus ferrooxidans reactions with pyrite, 17:6130 (RA;US)
Enhancement of surface properties for coal beneficiation, 17:6102 (RA;US)
Evaluation, engineering and development of advanced cyclone processes: Quarterly technical progress report No. 4, July 1, 1991–September 30, 1991, 17:6118 (R;US)
Oxidation of coal and coal pyrite: Mechanisms and influence on surface characteristics, 17:6213 (RA;US)
Pyrite surface characterization and control for advanced fine coal desulfurization technologies: First annual report, September 1, 1990–August 30, 1991, 17:6120 (R;US)
Pyrite surface characterization and control for advanced fine coal desulfurization technologies, 17:6214 (RA;US)
Pyrite thermochemistry, ash agglomeration, and char fragmentation during pulverized coal combustion, 17:6262 (RA;US)
Recovery of coal fines from preparation plant effluents: Final technical report, September 1, 1990–August 31, 1991, 17:6115 (R;US)

RADIOACTIVE WASTES
A nuclear material sampling plan, 17:6480 (R;US)
Basic chemistry for radioactive waste management: Studies on the chemical behaviors of radioactive elements, 17:7141 (R;KR;In Korean)
Directory of certificates of compliance for radioactive materials packages: Report of NRC approved quality assurance programs for radioactive materials packages: Volume 3, Revision 11, 17:6364 (R;US)
Transport safety research abstracts. No. 1: Information on research recently concluded and in progress, 17:8386 (R;XA)
RADIOACTIVE PARTICULATES
See PARTICLES
RADIOACTIVE WASTE DISPOSAL
A physico-chemical characterisation technique for determining the pore-water chemistry in argillaceous rocks, 17:7592 (R;CH)
Aespoe hard rock laboratory. Evaluation and conceptual modelling based on the pre-investigations 1986-1990, 17:7600 (R;SE)
An improved model for the convergence of an excavation on rock salt: Paper to be presented at the International conference on structural mechanics in reactor technology (paper L19/5), Tokyo, Japan, August 18-23, 1991, 17:6383 (R;NL)
Hydrogeological conditions in the Finnsjoen area. Compilation of data and conceptual model, 17:7601 (R;SE)
Microbiological analysis at the Osamu Utsumi mine and Morro do Ferro analogue study sites, Pocos de Caldas, Brazil: Pcos de Caldas Report No. 10, 17:7598 (R;SE)
Permeability and long-term durability of concrete in final repository conditions, 17:6452 (R;FI;In Finnish)
Preliminary performance assessment strategy for single-shell tank waste disposal, 17:6443 (R;US)
Progress report of the 600 m borehole project of the CEC programme on radioactive waste management and disposal: January-July 1990, 17:6381 (R;NL)
Progress report of the ECN contribution to the experiments in the HAW project: 2nd half year 1990, 17:6382 (R;NL)
Progress report of the ECN contribution to the experiments in the HAW project: 2nd quarter 1990, 17:6380 (R;NL)
Progress report of the ECN contribution to the experiments in the HAW project: 2nd half year 1990, 17:6382 (R;NL)
The Stripa project. Annual report 1990, 17:7608 (R;SE)
VAM2D: Variably saturated analysis model in two dimensions: Version 5.2 with hysteresis and chained decay transport: Documentation and user's guide: Revision 1, 17:6409 (R;US)
Validation and testing of the VAM2D computer code, 17:6410 (R;US)

SILICON HYDRIDES
See SILANES

SILICON NITRIDES
Composite ceramic powders obtained by laser induced reactions of silane and amines, 17:6974 (R;IT)
High temperature tensile and fatigue strengths of Si_3N_4, 17:6967 (R;US)
Microwave sintered silicon nitride ceramics, 17:6966 (R;US)
Selective plasma etching: Final report, 17:6984 (R;US)
Steady-state creep of hot-pressed silicon carbide whisker-reinforced silicon nitride, 17:6970 (R;US)

SILICON OXIDES
See also SILICA
SiO_2 membranes for H_2 separation in coal gas processing, 17:6969 (RA;US)
Structural and interfacial characteristics of thin (<10 nm) SiO_2 films grown by electron cyclotron resonance plasma oxidation on [100] Si substrates, 17:6985 (R;US)

SILICON SEMICONDUCTOR DETECTORS
See SI SEMICONDUCTOR DETECTORS

SILICON SOLAR CELLS
Modelling and fabrication of high-efficiency silicon solar cells, 17:6531 (R;US)
Photovoltaic manufacturing technology, Phase 1: Final subcontract report, 9 January 1991–14 April 1991, 17:6522 (R;US)
Process development for high-efficiency silicon solar cells, 17:6530 (R;US)
The effectiveness and stability of impurity/defect interactions and their impact on minority carrier lifetime: Annual subcontract report, 1 August 1990–31 July 1991, 17:6526 (R;US)

SILVER
Binary fission of highly excited nuclei, 17:8105 (IA;IN)
Total stopping power in low energy electrons, 17:8125 (IA;IN)

SILVER 109 TARGET
Evaluation of $^{109}Ag(n,\gamma)^{110m}Ag$ reaction cross sections and their covariance data, 17:8087 (RA;XA)

SIMS
See MASS SPECTROSCOPY

SIN CYCLOTRON
SINQ: status report Oct. 1990, 17:7244 (RA;JP)

SITE REHABILITATION
See REMEDIAL ACTION

SKELETON
Skeletal remodeling dynamics: New approaches with imaging instrumentation, 17:7482 (R;US)

SKIMMERS
Apparatus for recuperating oil spills from water, 17:6308 (PA;CA;In French)

SKYRMIONS
See SOLITONS

SLAGS
Comparison of lime and iron oxide for high temperature sulfur removal, 17:6239 (RA;US)

SLC
See STANFORD LINEAR COLLIDER

SLUDGES
Candidate reagents and procedures for the dissolution of Hanford Site single-shell tank sludges, 17:6446 (R;US)
Evaluation of sulfur-reducing microorganisms for organic desulfurization: Final technical report, September 1, 1990–August 31, 1991, 17:6184 (R;US)
Houston Lighting and Power Company's coal combustion by-products utilization program: A decade of success, 17:6563 (RA;US)

SLUGS (FUEL)

SMES
See SUPERCONDUCTING MAGNETIC ENERGY STORAGE

SMOKES
See also TOBACCO SMOKES
Drop size distributions and the efficiency of nucleation scavenging over the Hardiman fire: Revision 1, 17:7562 (R;US)
Generator, mechanical, smoke: For dual-purpose unit, XM56, Yuma Proving Ground, Yuma, Arizona: Environmental assessment, 17:7558 (R;US)
Global simulations of smoke from Kuwaiti oil fires and possible effects on climate, 17:7555 (R;US)

SODIUM
Determination of calcium in sodium by vacuum distillation-atomic absorption spectrophotometry, 17:7040 (R;CN;In Chinese)

Effects of light metal compounds on coal and carbon gasification, 17:6216 (RA;US)
Use of on-line analyzers for sodium determination in lignite, 17:6201 (RA;US)

SODIUM 23 TARGET
The evaluation of $^{23}Na(n,\gamma)^{24}Na$ reaction cross section, 17:8076 (RA;XA)

SODIUM MINERALS
See MINERALS

SODIUM NITRATES
A summary of available information on ferrocyanide tank wastes: Hanford Tank Safety Project, 17:6417 (R;US)
Luminescence properties of alkali metal nitrates in pulsed radiation field, 17:8190 (IA;SU;In Russian)
Pulse radiolysis of sodium nitrate crystals alloyed by nitrite ions, 17:7125 (IA;SU;In Russian)

SODIUM-WATER REACTIONS
See MOLTEN METAL-WATER REACTIONS

SOILING
See SURFACE CONTAMINATION

SOILS
Development of clean coal and clean soil technologies using advanced agglomeration techniques: Volume 3, Soil Clean-up and hydrocarbon waste treatment process: ARC/EPRI Consortium Coal Processing Development Program, 17:6108 (R;US)
Environmental surveillance master sampling schedule, 17:7560 (R;US)
Generator, mechanical, smoke: For dual-purpose unit, XM56, Yuma Proving Ground, Yuma, Arizona: Environmental assessment, 17:7558 (R;US)
Hanford Site surface soil radioactive contamination control plan for fiscal year 1992, 17:7613 (R;US)
Microbial mineralization of coal-derived hydrophobic organic contaminants: The role of bio-surfactant/emulsifier and solubilization, 17:7681 (RA;US)
Preliminary site characterization summary and engineering evaluation/cost analysis for Site 2, New Fuel Farm, Naval Air Station Fallon, Fallon, Nevada, 17:7628 (R;US)
Quarry detection monitoring wells completion report WP-166: Weldon Spring Site Remedial Action Project, Weldon Spring, Missouri, 17:7615 (R;US)
Remedial investigation Phase 2 supplemental work plan for the Hanford Site 1100-EM-1 Operable Unit: Revision 1, 17:6456 (R;US)
Removal of actinides from Rocky Flats soil, 17:6421 (R;US)
Revised RCRA Closure Plan for the Interim Drum Yard (S-030) at the Oak Ridge Y-12 Plant, Oak Ridge, Tennessee: Revision of Y/TS-347/1R3, 17:6468 (R;US)
Summary of the landfill remediation problems and technology needs of the Oak Ridge Reservation Environmental Restoration Programs, 17:6458 (R;US)
The influence of surfactant sorption on capillary pressure-saturation relationships, 17:7569 (R;US)

SOLAR CELLS
See also CADMIUM TELLURIDE SOLAR CELLS
COPPER SELENIDE SOLAR CELLS
INDIUM SELENIDE SOLAR CELLS
SILICON SOLAR CELLS
Improved techniques for manufacturing the Alpha Solarco concentrating photovoltaic system: Final subcontract report, 9 January 1991–14 April 1991, 17:6524 (R;US)
Photovoltaic manufacturing technology, Phase 1: Final subcontract report, 9 January 1991–14 April 1991, 17:6523 (R;US)
Photovoltaic manufacturing technology, Phase 1: Final subcontract report, 9 January 1991–14 April 1991, 17:6516 (R;US)
Polycrystalline thin-film solar cells and modules, 17:6527 (R;US)
Role of polycrystallinity in CdTe and $CuInSe_2$ photovoltaic cells: Annual subcontract report, 1 April 1990–31 March 1991, 17:6521 (R;US)
SERI photovoltaic subcontract reports: Abstracts and document control information, January 1–July 31, 1991, 17:6520 (R;US)
The results of the PEP '87 round robin calibration of reference solar cells and modules. Final report, 17:6529 (R;DE)

SOLAR COLLECTORS
A study of the flat plate solar collector in Guinea, 17:6538 (R;XA)

SOLAR CONCENTRATORS
Facet development for a faceted stretched-membrane dish by SAIC, 17:6540 (R;US)
Photovoltaic Manufacturing Technology (PVMaT) improvements for ENTECH's concentrator module: Final technical report, 9 January 1991–14 April 1991, 17:6539 (R;US)

SOLAR ENERGY
Solar photovoltaic electric technology, 17:6515 (RA;XA)

SOLAR NEUTRINOS
Measurement of solar neutrinos in Kamiokande-2: Final report, January 1, 1989–December 31, 1989, 17:7842 (R;US)

SOLAR RADIATION
Anisotropic reflection in mountainous terrain to determine the absorption of solar radiation from satellite data, 17:6514 (R;DE;In German)

SOLAR WATER HEATERS
Developing, testing, evaluating and optimizing solar heating and cooling systems: Status report, 1 September 1991–31 October 1991, 17:6536 (R;US)

SOLDERED JOINTS
Alloy design options for improvement of the thermomechanical fatigue life of solder joints, 17:6948 (R;US)
Fluxless laser soldering for electronic packaging, 17:6949 (R;US)
Solder extrusion pressure bonding process and bonded products produced thereby, 17:6939 (PA;US)

SOLID ELECTROLYTES
Characterization and development of a new ceramic electrolyte for fuel cell applications: Final report, 17:6837 (R;US)

SOLID FUELS
See also MIXED OXIDE FUELS
The Liquids From Coal mild gasification process: Handling and combustion properties of the solid process derived fuel, 17:6127 (RA;US)

SOLID LUBRICANTS
Commercialization plan for Argonne's lubricious coatings, 17:6910 (R;US)

SOLID SCINTILLATION DETECTORS
See also PLASTIC SCINTILLATION DETECTORS
Warhead counting using neutron scintillators: Detector development, testing, and demonstration, 17:7447 (R;US)

SOLID STATE LASERS
See also NEODYMIUM LASERS
SEMICONDUCTOR LASERS
Generation of high-quality petawatt pulses: Final report, 17:7232 (R;US)
Materials for diode pumped solid state lasers, 17:7233 (R;US)
Quantum-well laser modeling, 17:7222 (RA;US)

SOLID WASTES
See also WOOD WASTES
Active Sites Environmental Monitoring Program: Mid-FY 1991 report, 17:6413 (R;US)
Determination of uranium and uranium isotopes in mixed and radioactive wastes by inductively coupled plasma-mass spectrometry, 17:7058 (R;US)
Remedial investigation Phase 2 supplemental work plan for the Hanford Site 1100-EM-1 Operable Unit: Revision 1, 17:6456 (R;US)

SOLIDS
Behaviour of elastic bodies in pulse and cyclic thermal fields, 17:6922 (IA;SU;In Russian)
Real-space multiple scattering theory method: Formalism and applications, 17:8156 (R;US)

SOLITONS
Relativistic projection and boost of solitons, 17:7905 (R;US)

SOLUTES
The influence of pressure on solute retention in liquid chromatography, 17:7044 (R;US)

SOLVATED ELECTRONS
Investigation into reactivity of hydrated electrons and H atoms in respect to actinoid ions in acidic aqueous solutions using pulsed radiolysis method, 17:7117 (IA;SU;In Russian)

Radiation-chemical behaviour and spectroscopic characteristics of solvated electrons in some trialkyl phosphates, 17:7109 (IA;SU;In Russian)
Solvation of excess electron in polar liquid: an overview (Preprint no. RC-01), 17:7106 (IA;IN)

SOLVENTS
See also ORGANIC SOLVENTS
Water-based cleaning fundamentals, 17:6863 (R;US)

SONDES
See PROBES

SONIC LOGGING
Estimation of the temperature structure parameter and the sensible heat flux from SODAR measurements, 17:7585 (R;DE)

SOOT
The toxicity of particles from combustion processes, 17:7801 (R;US)

SORBENT INJECTION PROCESSES
Calcium duct injection technology for SO_2 control, 17:6232 (RA;US)
Duct injection technology prototype development: Evaluation of engineering data: Topical report No. 2, 17:6245 (R;US)
Molten iron oxysulfide as a superior sulfur sorbent, 17:6238 (RA;US)
Synergistic capture mechanisms for alkali and sulfur species from combustion, 17:6240 (RA;US)

SORPTION
See also ADSORPTION
Results of research concerning phosphorus-32 in reactor effluent, 17:6660 (R;US)

SOURCE TERMS
Letter report: References for radioactive releases to the atmosphere from Hanford operations, 1944–1957: Hanford Environmental Dose Reconstruction Project, 17:7559 (R;US)

SPACE

SUBBITUMINOUS COAL
 Chemical Analysis
  Digital scanning electron microscopy techniques for the characterization of coal minerals and coal ash, 17:6200 (RA;US)
 Chemical Reactions
  Basic properties of coals and other solids, 17:6208 (RA;US)
 Coal Preparation
  Development of clean coal and clean soil technologies using advanced agglomeration techniques: Volume 3, Soil Clean-up and hydrocarbon waste treatment process: ARC/EPRI Consortium Coal Processing Development Program, 17:6108 (R;US)
  Mulled coal—A beneficiated coal form for use as a fuel or fuel intermediate: Final technical progress report No. 3, October 1, 1990–December 31, 1990, 17:6110 (R;US)
 Cocombustion
  Full scale milling and burning tests of brown coal and subbituminous coal mixtures, 17:6558 (RA;US)
 Combustion
  Use of hot-water dried subbituminous coal-water slurry in a direct-fired gas turbine, 17:6255 (RA;US)
 Combustion Kinetics
  Digital scanning electron microscopy techniques for the characterization of coal minerals and coal ash, 17:6200 (RA;US)
 Comminution
  Full scale milling and burning tests of brown coal and subbituminous coal mixtures, 17:6558 (RA;US)
 Deashing
  Preparation of dewatered and deashed low-rank coals by oil agglomeration, 17:6099 (RA;US)
  Western Energy Company Advanced Coal Conversion process, 17:6100 (RA;US)
 Drying
  Characterization of hydrothermally and evaporatively dried coals and char products from Usibelli subbituminous 'C' coals, 17:6202 (RA;US)

Preparation of dewatered and deashed low-rank coals by oil agglomeration, 17:6099 (RA;US)
Western Energy Company Advanced Coal Conversion process, 17:6100 (RA;US)
Flotation
Hydrocarbon-oil encapsulated bubble flotation of fine coal, 17:6105 (RA;US)
Fuel Substitution
Advanced power systems fired with low rank coals, 17:6551 (RA;US)
Blending of eastern and western coal: Results of a test burn at Joppa Station, 17:6553 (RA;US)
Puentes Power Plant retrofitting: Use of Powder River Basin (P.R.B.) sub-bituminous coal, 17:6552 (RA;US)
Hydrocracking
The Charfuel coal refining process, 17:6126 (RA;US)
Microstructure
Molecular accessibility in solvent swelled coal, 17:6210 (RA;US)
Pyrolysis
Characterization of hydrothermally and evaporatively dried coals and char products from Usibelli subbituminous 'C' coals, 17:6202 (RA;US)
Thermodynamic Properties
Basic properties of coals and other solids, 17:6208 (RA;US)

SUBCRITICAL FLOW
See LAMINAR FLOW

SUBMARINES
Radar ocean imaging, 17:7520 (RA;US)

SUBSTRATES
The use of electrophoretically deposited diamond powder coatings as a precursor for chemically vapor deposited diamond, 17:7028 (R;US)

SUBSURFACE STRUCTURES
18 W/m^2 Mockup for Defense High-Level Waste (Rooms A): In situ data report: Volume 1—Mechanical response gages (February 1985–June 1990): Waste Isolation Pilot Plant (WIPP) Thermal/Structural Interactions Program, 17:6429 (R;US)
Buried waste remote survey of the Idaho National Engineering Laboratory subsurface disposal area, 17:6371 (R;US)

SUBURBS
See URBAN AREAS

SUGARS

Control of catalytic hydrotreating selectivity with ammonia: Quarterly report, July 1, 1991–September 30, 1991, 17:6172 (R;US)
Supercritical fluid extraction and organic solvent microextraction of chemical agent simulants from soil, 17:7571 (R;US)
Wet oxidation of oil-bearing sulfide wastes, 17:6860 (R;US)

SULFITES
Radiation-catalytic oxidation of ammonium bisulfite, 17:7126 (IA;SU;In Russian)

SULFOCYANIDES
See THIOCYANATES

SULFONIC ACIDS
Basic properties of coals and other solids, 17:6208 (RA;US)

SULFUR
Evaluation of sulfur-reducing microorganisms for organic desulfurization: Final technical report, September 1, 1990–August 31, 1991, 17:6184 (R;US)
Genetic engineering of sulfur-degrading Sulfolobus: Final technical report, September 1, 1990–August 31, 1991, 17:6186 (R;US)
SRC-I computer model, 17:6107 (R;US)
Synergistic capture mechanisms for alkali and sulfur species from combustion, 17:6240 (RA;US)

SULFUR 32 REACTIONS
Forward-transverse energy correlations in ultra-relativistic heavy ion collisions, 17:8100 (IA;IN)

SULFUR CONTENT
A novel coal feeder for production of low sulfur fuel: Annual technical progress report, October 1, 1990–October 1, 1991, 17:6173 (R;US)
Fine coal flotation plant waste comparison–column vs. sub-a cells: Final technical report, September 1, 1990–August 31, 1991, 17:6116 (R;US)
New regents for coal desulfurization: Final technical report, September 1, 1990–August 31, 1991, 17:6189 (R;US)

SULFUR DIOXIDE
A 12-MW-scale pilot study of in-duct scrubbing (IDS) using a rotary atomizer, 17:6243 (R;US)
Combined SO$_2$/NO$_x$ control using ferrous·EDTA and a secondary additive in a lime-based aqueous scrubber system, 17:6230 (R;US)
Comparative study of the reactions of metal oxides with SO$_2$ and H$_2$S, 17:6234 (RA;US)
Comparison of lime and iron oxide for high temperature sulfur removal, 17:6239 (RA;US)
Destruction of acid gas emissions, 17:6561 (PA;US)
Development of a test system for the inspection of the phytotoxicity of gases, 17:7804 (I;DE;In German)
Duct injection technology prototype development: Evaluation of engineering data: Topical report No. 2, 17:6245 (R;US)
Electric Power Research Institute, High-Sulfur Test Center report to the Steering Committee, July 1991, 17:6242 (R;US)
Full scale milling and burning tests of brown coal and subbituminous coal mixtures, 17:6558 (RA;US)
Fundamental investigation of Duct/ESP phenomena: 1.7 MW pilot parametric testing results: Topical report No. 2, 17:6244 (R;US)
Healy Clean Coal Project: Technical progress report, quarterly report No. 1 & 2 for the period January–June 1991, 17:6246 (R;US)
Marketable permits for controlling sulphur dioxide emissions, 17:6289 (R;US)
Puentes Power Plant retrofitting: Use of Powder River Basin (P.R.B.) sub-bituminous coal, 17:6552 (RA;US)
'Top-down' BACT analysis - Recommended approach and recent determinations, 17:6233 (RA;US)

SULFUR HYDRIDES
See HYDROGEN SULFIDES

SULFUR OXIDES
See also SULFUR DIOXIDE
Development of an advanced high efficiency coal combustor for boiler retrofit: Task 3, Demonstration scale testing at 50 x 10^6 BTU/HR: Final report, 17:6281 (R;US)

SULFUR SULFIDES
See SULFUR

SULFURIC ACID
Duct injection technology prototype development: Materials corrosion report, Revision 1, 17:6566 (R;US)
The reducibility of sulphuric acid and sulphate in aqueous solution, 17:7093 (R;CH)

SUPERALLOYS

Measured fast-neutron activation cross sections of Ag, Cu, Eu, Fe, Hf, Ni, Tb and Ti at 10.3 and 14.8 MeV and for the continuum neutron spectrum produced by 7-MeV deuterons on a thick Be-metal target, 17:8324 (R;US)
Plasma-materials interactions and edge-plasma physics research: Progress report, 1990–1991: PISCES Program, 17:8375 (R;US)
Production bias: A proposed modification of the driving force for void swelling under cascade damage conditions, 17:8371 (R;US)
Response of solute and precipitation-strengthened copper alloys at high neutron exposure, 17:8370 (R;US)
The effect of neutron irradiation on the structure and properties of carbon-carbon composite materials, 17:8326 (R;US)
The influence of helium on mechanical properties of model austenitic alloys determined using ^{59}Ni isotopic tailoring and fast reactor irradiation, 17:8368 (R;US)
The measurement of gamma ray induced heating in a mixed neutron and gamma ray environment, 17:8325 (R;US)
THERMONUCLEAR REACTOR WALLS
See also FIRST WALL
FT Tokamak Upgrade (FTU) vacuum vessel section cleaning by glow discharge in hydrogen, 17:8335 (R;IT)
THERMONUCLEAR REACTORS
See also D-T REACTORS
TOKAMAK TYPE REACTORS
Code development incorporating environmental, safety, and economic aspects of fusion reactors (FY 89–91): Final report, 17:8329 (R;US)
THERMONUCLEAR WEAPONS
See NUCLEAR WEAPONS
THERMOPILES
See THERMOCOUPLES
THERMOPLASTICS
Low temperature properties of engineering thermoplastics, 17:7016 (R;US)
THIN FILMS
A method of producing high quality oxide and related films on surfaces, 17:6965 (R;US)
Hydrodynamic instabilities and coherent structures: Progress report, January 1, 1991–December 31, 1991, 17:8157 (R;US)
Microcomputer enhanced optical investigation of spreading and evaporative processes in ultra thin films: Progress report, January 1, 1991–December 31, 1991, 17:7481 (R;US)
Structural and interfacial characteristics of thin (<10 nm) SiO$_2$ films grown by electron cyclotron resonance plasma oxidation on [100] Si substrates, 17:6985 (R;US)
Thermal conductivities of thin, sputtered optical films, 17:6989 (R;US)
THIO COMPOUNDS
See ORGANIC SULFUR COMPOUNDS
THIOALCOHOLS
See THIOLS
THIOBACILLUS FERROXIDANS
Electrochemistry of Thiobacillus ferrooxidans reactions with pyrite, 17:6130 (RA;US)
THIOCYANATES
Radiolysis of rhodanide-ions in oxidative media, 17:7116 (IA;SU;In Russian)
THIOCYANIDES
See THIOCYANATES
THIOETHERS
See SULFIDES
THIOLS
Mechanisms for radiation damage in DNA: Progress report, June 1, 1991–May 31, 1992, 17:7102 (R;US)
THIYL RADICALS
Reactions of an excited state and of carbon- and sulfur-centere radicals with transition metal complexes, 17:7085 (R;US)
THORAX
See CHEST
THORIUM
Methodology of simultaneous analysis of Uranium and Thorium by nuclear and atomic techniques. Application to the Uranium and Thorium dosing in mineralogic samples, 17:6323 (I;MA;In French)
THORIUM 232 TARGET
Extension of the ^{232}Th burnup chain in the WIMSD/4 program library, 17:8070 (R;XA)
THORIUM BORIDES
Studies on plutonium and neptunium chemistry at Cadarache (Preprint no. IT-06), 17:7135 (IA;IN)
THORIUM CYCLE
Spallation symbiont and thorium breeding, 17:6801 (RA;JP;In Japanese)
THORIUM ORES
Methodology of simultaneous analysis of Uranium and Thorium by nuclear and atomic techniques. Application to the Uranium and Thorium dosing in mineralogic samples, 17:6323 (I;MA;In French)
THULIUM 166
Coriolis corrections in quadrupole moments of odd-odd nuclei, 17:8023 (IA;IN)
THULIUM 170
Coriolis corrections in quadrupole moments of odd-odd nuclei, 17:8023 (IA;IN)
THYRISTORS
Radiation compensated optically-triggered GaAs and Si thyristor switches, 17:7475 (R;US)
THYROID
On the cells of origin of radiogenic thyroid cancer: New studies based on an old idea, 17:7744 (R;US)
Radiogenic neoplasia in thyroid and mammary clonogens: Progress report, January 1, 1991–December 31, 1991, 17:7746 (R;US)
Usefulness and reliability of available epidemiological study results in assessments of radiation-related risks of cancer. Pt. 4. Radiation-related risk of cancer of the thyroid, 17:7738 (R;DE;In German)
TIDAL POWER
Tidal energy, 17:6546 (RA;XA)
TIGHT SANDS
See PERMEABILITY
TIME-OF-FLIGHT SPECTROMETERS
A low background pulsed neutron polyenergetic beam at the ET-RR-1 reactor, 17:7429 (R;XA)
A time-of-flight neutron spectrometer for DT-plasma diagnostics, 17:8315 (R;SE)

Low-energy hydrogen flux measurements at the TORTUR tokamak with negative ion conversion, 17:8287 (I;NL)
Neutron time-of-flight counters and spectrometers for diagnostics of burning fusion plasmas, 17:8313 (R;SE)
TIME-TO-AMPLITUDE CONVERTERS
A set of blocks for time measurements developed in the Laboratory of Nuclear Problems, JINR, 17:7502 (R;SU;In Russian)
TIN
Analysis of ultrasonic tinning, 17:6950 (R;US)
TIN 122 TARGET
A simple two-channel barrier penetration model of heavy ion fusion, 17:8098 (IA;IN)
TIN ALLOYS
See also ALLOY-ZR98SN-4
TIN BASE ALLOYS
Alloy design options for improvement of the thermomechanical fatigue life of solder joints, 17:6948 (R;US)
Some effects of porosity and HIP'ing on critical currents in internal-tin-processed multifilamentary Nb_3Sn wires, 17:6897 (R;US)
TIN BASE ALLOYS
Wettability analysis of tin-based, lead free solders, 17:6951 (R;US)
TIN HYDRIDES
Tritiation methods and tritium NMR spectroscopy, 17:7090 (R;US)
TIN TELLURIDES
Phase transition in IV-VI compound semiconductors at high pressures, 17:8169 (R;XA)
TIRES
Scrapped automobiles and waste tyres: Waste management problematics, 17:6862 (R;IT;In Italian)
TISSUE CULTURES
Development of technology for plantlet propagation by tissue culture. (3).: Strawberry callus growth and changes in pH in liquid medium, 17:6500 (R;JP;In Japanese)
TITANATES
See also STRONTIUM TITANATES
Defect structure of semiconducting and insulating epitafial oxides: Progress report, May 1, 1991–April 30, 1992, 17:6971 (R;US)
TITANIUM
Evaluation of the ${}^{N}Ti(n,x)$ ${}^{46}Sc$ reaction cross section, 17:8079 (RA;XA)
Measured fast-neutron activation cross sections of Ag, Cu, Eu, Fe, Hf, Ni, Tb and Ti at 10.3 and 14.8 MeV and for the continuum neutron spectrum produced by 7-MeV deuterons on a thick Be-metal target, 17:8324 (R;US)
TITANIUM 46
Effective single-particle energies in the f-p shell, 17:8015 (IA;IN)
TITANIUM 46 TARGET
Evaluation of ${}^{46}Ti(n,p)$ ${}^{46}Sc$ reaction cross section, 17:8078 (RA;XA)
TITANIUM 48
Effective single-particle energies in the f-p shell, 17:8015 (IA;IN)
TITANIUM 48 TARGET
Evaluation of the ${}^{48}Ti(n,p)$ ${}^{48}Sc$ reaction cross section, 17:8080 (RA;XA)
Proton resonance spectroscopy: Progress report, December 1, 1990–November 30, 1991, 17:8059 (R;US)
TITANIUM OXIDES
Mechanical properties of materials with nanometer scale microstructures: Progress report, 1 April 1989 to Present, 17:6909 (R;US)
Mechanistic and kinetic studies of high-temperature coal gas desulfurization sorbents: Final report, July 1988–July 1991, 17:6169 (R;US)
Mechanistic and kinetic studies of high-temperature coal gas desulfurization sorbents, 17:6158 (RA;US)
Mechanistic and kinetic studies of high-temperature coal gas desulfurization sorbents: Final report, July 1988–July 1991, 17:6169 (R;US)
Modeling and experimental studies of oxide covered metal surfaces: TiO_2/Ti a model system: Progress report, 17:6973 (R;US)
SiO_2 membranes for H_2 separation in coal gas processing, 17:6969 (RA;US)
Surfaces and interfaces of ceramics and metals for period July 1988–June 1991, 17:6972 (R;US)
The influence of the oxygen partial pressure on the quasi-ternary system Cr-Mn-Ti-oxide, 17:6981 (R;DE;In German)
TITANIUM SILICIDES
Synthesis and characterization of nanocrystalline silicide compounds, 17:6927 (R;US)
TLATELOLCO TREATY
Treaty for the prohibition of nuclear weapons in Latin America (Treaty of Tlatelolco), 17:6885 (I;XU)
TLD (DOSEMETERS)
See THERMOLUMINESCENT DOSEMETERS
TLD SYSTEMS
See THERMOLUMINESCENT DOSEMETERS
TMPN

Aspect Ratio
The Proto-ETA small-aspect-ratio experiment, 17:8347 (RA;XA)
Boundary Layers
ADITYA: Initial results and status of edge control experiments, 17:8269 (RA;XA)
Control of tokamak edge fluctuations, 17:8264 (RA;XA)
Edge studies, helicity current drive and diagnostic development on the Phaedrus-T tokamak, 17:8275 (RA;XA)
Breakdown
ADITYA: Initial results and status of edge control experiments, 17:8269 (RA;XA)
Charged-Particle Transport
Energy confinement and coupling of transport process with MHD modes, 17:8262 (RA;XA)
Electron Temperature
Profile consistency coupled with MHD equilibrium extended to non-stationary plasma conditions, 17:8249 (RA;IT)
Icr Heating
Auxiliary radiofrequency heating of tokamaks, Task 3: Final report, November 16, 1988–November 15, 1991, 17:8230 (R;US)
Ion-Atom Collisions
Multicharged ion-atom collisions: Application for tokamak edge plasma physics, 17:8278 (RA;XA)
Magnetic Confinement
Magnetic confinement fusion plasma theory, Task 1: Final report, November 16, 1990–November 15, 1991, 17:8229 (R;US)

Neoclassical Transport Theory
Neoclassical diffusion in a turbulent plasma, 17:8234 (R;US)
Neutral Atom Beam Injection
The neutral hydrogen beam experiment in the Columbia High Beta Tokamak "HBT": Part 1, The design of the beam system: Part 2, The orbit simulation of fast ions, 17:8330 (R;US)
Non-Inductive Current Drive
Edge studies, helicity current drive and diagnostic development on the Phaedrus-T tokamak, 17:8275 (RA;XA)
Plasma Confinement
Phenomena connected with the radial electric field in tokamak plasmas, 17:8271 (RA;XA)
Plasma Diagnostics
Edge studies, helicity current drive and diagnostic development on the Phaedrus-T tokamak, 17:8275 (RA;XA)
Spectroscopic diagnostics of high temperature plasmas, January 1, 1991–December 31, 1991, 17:8228 (R;US)
Plasma Instability
The effects of plasma deformability on the feedback stabilization of axisymmetric modes in tokamak plasmas, 17:8302 (R;CH)
Plasma Sheath
Self-consistent radial sheath in ignited plasmas, 17:8235 (R;US)
Plasma Simulation
The neutral hydrogen beam experiment in the Columbia High Beta Tokamak "HBT": Part 1, The design of the beam system: Part 2, The orbit simulation of fast ions, 17:8330 (R;US)
Rotational Transform
Eccentric operation modes in small tori and their physics, 17:8272 (RA;XA)
Runaway Electrons
The optimization of production and control of hot-electron plasmas: Final technical report, 17:8208 (R;US)
Temperature Gradients
Toroidal kinetic η_i-mode study in high temperature plasmas, 17:8237 (R;US)
Transport Theory
Transport Task Force Leadership, Task 4: Final report, November 16, 1990–November 15, 1991, 17:8231 (R;US)
TOKAMAK FUSION TEST REACTOR
See TFTR TOKAMAK
TOKAMAK TYPE REACTORS
High performance, long pulse, tokamak, 17:8339 (R;IT)
TOKOLOSHE TOKAMAK
External helical coil studies on Tokoloshe tokamak, 17:8259 (RA;XA)
TOLUENE
Fundamental studies of water pretreatment of coal: Seventh quarterly report, April 1, 1991–June 30, 1991, 17:6176 (R;US)
TONSILS
See LYMPHATIC SYSTEM
TOOLS
See also CUTTING TOOLS
MACHINE TOOLS
Design and equipment installation for Radioisotope Power Systems Facility metallic cleaning room 162 subsystem 6130: Revision 1, 17:6836 (R;US)
System and method for exchanging tools and end effectors on a robot, 17:7160 (PA;US)
TOP PARTICLES
Top search at CDF, 17:7976 (R;US)
TOPONIUM
Quark-antiquark bound states, 17:7985 (IA;IN)
TOROIDAL CONFIGURATION
Plasma physics research in the MST toroidal confinement device: Progress report, November 1, 1990–October 31, 1991, 17:8222 (R;US)
TORSATRON STELLARATORS
Equilibrium beta limit and alpha particle containment in stellarators as function of their aspect ratio, 17:8333 (RA;IT)
Experiments on the laser injection of impurity atoms at the Uragan-3 torsatron, 17:8296 (R;UA;In Russian)
Rotational transform angles in the U-2M torsatron with account of plasma finite pressure, 17:8295 (R;UA;In Russian)
TORTUS TOKAMAK
Discrete Alfven waves in TORTUS, 17:8265 (RA;XA)
TOTAL-ABSORPTION SPECTROMETERS
See SHOWER COUNTERS
TOXIC MATERIALS
See also TOXINS
Hazard ranking systems for chemical wastes and chemical waste sites: Hazardous waste ranking systems, 17:7576 (R;US)
Reductive mobilization of oxide-bound metals: Progress report, November 1, 1990–September 15, 1991, 17:7574 (R;US)
Regulated bioluminescence as a tool for bioremediation process monitoring and control of bacterial cultures, 17:7680 (R;US)
Suggested hydrologic investigations at the Hanford Directed Operations, 17:6455 (R;US)
Waste minimization at fleet operations, 17:6854 (R;US)
TOXICITY
Development of a test system for the inspection of the phytotoxicity of gases, 17:7804 (I;DE;In German)
Hazard ranking systems for chemical wastes and chemical waste sites: Hazardous waste ranking systems, 17:7576 (R;US)
TOXINS
Comparative study of native and irradiated crotoxin. Biochemical and pharmacological effects, 17:7697 (I;BR;In Portuguese)
TRACER TECHNIQUES
Tracer transport in fractures: analysis of field data based on a variable - aperture channel model, 17:7609 (R;SE)

TRIPLET PARTICLES
See QUARKS

TRISTAN PROJECT
See TRISTAN STORAGE RINGS

TRISTAN STORAGE RINGS
Report from 'Orbit sub-group' of task force for MR synchrotron radiation project, 17:7383 (R;JP;In Japanese)

TRITIUM
A distributed process control system for the Tritium Emissions Reduction Facility, 17:6407 (R;US)
A new technique for ion beam tritium labelling, 17:7131 (R;CN;In Chinese)
A probabilistic risk assessment of Mound's Tritium Emissions Reduction Facility (TERF), 17:6405 (R;US)
A study on the separation characteristics of tritiated water vapor adsorption, 17:7088 (R;KR;In Korean)
Assessment of end of life disposal, tritium recovery and purification strategies for radioluminescent lights, 17:6418 (R;US)
Catalytic reactor system for the tritium emissions reduction facility, 17:6404 (R;US)
Design and operations at the National Tritium Labelling Facility, 17:7142 (R;US)
Differences between the TERF and the ERS tritium capture systems, 17:6403 (R;US)
Transportation environments of the AL-SX (H1616), 17:7172 (R;US)
Tritium diffusion in electrotechnical phosphorus with different degrees of radiative damage, 17:8188 (IA;SU;In Russian)
Tritium production, management and its impact on safety for a D-^{3}He fusion reactor, 17:8320 (R;US)
Tritium transport in lithium ceramics porous media, 17:8323 (R;US)

TRITIUM RECOVERY
ITER fuel cycle (International Thermonuclear Experimental Reactor.), 17:8351 (I;XA)

TRIUMF CYCLOTRON
Pulsed neutron sources at KAON, 17:7247 (RA;JP)

TROPOSPHERE
Potential changes in atmospheric chemistry in the decades ahead: Climate and biosphere interactions and feedbacks, 17:7542 (R;US)

TRU WASTES
See ALPHA-BEARING WASTES

TRUCKS
Algorithm for a novel fiber-optic weigh-in-motion sensor system, 17:7500 (R;US)
Fuel savings in the heavy trucking industry through cool storage: Final report, 17:6849 (R;US)
Herbert Easterly auxiliary truck heater: Final technical report, 17:6848 (R;US)

TRUEX PROCESS
Batch testing of the TRUEX process on some unique Hanford wastes and of the TRUEX and SREX processes on commercial fuel reprocessing high-level waste, 17:6361 (R;US)

TRX-1
See REVERSE-FIELD PINCH

TRYPANOSOMA
Cloning and characterization of Trypanosoma cruzi antigens bearing repetitive epitopes, 17:7656 (RA;XA)

TRYPANOSOMIASIS
Cloning and characterization of Trypanosoma cruzi antigens bearing repetitive epitopes, 17:7656 (RA;XA)

TSUKUBA KEK SYNCHROTRON
See KEK SYNCHROTRON

TUBERCULOSIS
Comparison of immunoradiometric assay (IRMA) and liquid phase radioimmunoassay (LPRIA) in serodiagnosis of tuberculosis, 17:7661 (RA;XA)
Detection of antigenemia in the body fluids of patients with tuberculosis by conventional 2-site immunoradiometric assay (IRMA), 17:7662 (RA;XA)
Evaluation of immunoscintigraphic techniques in tuberculosis, 17:7664 (RA;XA)
Radioimmunoassay in the diagnosis of tuberculosis, 17:7663 (RA;XA)

TUBES
Cyclone reburning retrofit-corrosion evaluation: Final technical report, September 1, 1990–August 31, 1991, 17:6280 (R;US)
Steam generator operating experience, update for 1989–1990, 17:6585 (R;US)
Studies on the causes of failures in titanium tube condensers of nuclear power plants, 17:6933 (R;KR;In Korean)

TUFF
Calculation of experiment uncertainty in laboratory determination of several geoengineering properties of tuffs from Yucca Mountain, Nevada: Yucca Mountain Site Characterization Project (Yucca Mountain Project.), 17:6423 (R;US)

Research program to develop and validate conceptual models for flow and transport through unsaturated, fractured rock: Yucca Mountain Site Characterization Project (YUCCA MOUNTAIN PROJECT), 17:6428 (R;US)
Site characterization progress report: Yucca Mountain, Nevada, October 1, 1990–March 31, 1991: Number 4, 17:6379 (R;US)
Thermal performance of a buried nuclear waste storage container storing a hybrid mix of PWR and BWR spent fuel rods: Revision 1, 17:6438 (R;US)

TUMOR CELLS
An iterative computer graphics system to simulate the three dimension tumor growth, 17:8401 (I;BR;In Portuguese)

TUMOR VIRUSES
See ONCOGENIC VIRUSES

TUMORS
See NEOPLASMS

TUNGSTEN
Self-recovering superconducting strip detectors, 17:7390 (R;US)

TUNGSTEN 183
Intensities of two-quanta cascades at different excitation energies of compound nuclei ^{146}Nd, ^{174}Yb, ^{183}W, 17:8045 (R;SU)

TUNGSTEN SULFIDES
Fundamental studies of catalytic processing of synthetic liquids, 17:6135 (RA;US)

TUNNELS
PUREX Storage Tunnels dangerous waste permit application: Revision 1, Volume 1, 17:6334 (R;US)

TURBINE BLADES
Dynamic stall on wind turbine blades, 17:6547 (R;US)
Fiber-sensor design for turbine engines, 17:6873 (R;US)

TURBINES
See also WIND TURBINES
From the power of water comes energies, 17:6513 (PA;CA)

TURBULENCE
Radial particle transport due to the turbulent and quasi-stationary cross field drift on the CASTOR tokamak, 17:8274 (RA;XA)

TURBULENT FLOW
Premixed turbulent combustion: Progress report, 1 December 1990–30 November 1991, 17:7143 (R;US)

TURBULENT HEATING
Simulation of turbulent plasma heating by the ion-ion instability and ICRH through resonant absorption in two-ion species plasma, 17:8263 (RA;XA)

TWO-PHASE FLOW
Investigation of phase transport mechanisms in air-water bubbly flow in vertical channels, 17:7182 (RA;DE;In German)
Study of interfacial behavior in cocurrent gas-liquid flows: Progres report, November 1, 1990–October 31, 1991, 17:7179 (R;US)

TWO-STREAM INSTABILITY
Simulation of turbulent plasma heating by the ion-ion instability and ICRH through resonant absorption in two-ion species plasma, 17:8263 (RA;XA)

TYPE-II SUPERCONDUCTORS
Phenomenological theory of electrodynamic properties of type-II superconductors, 17:8200 (R;US)

TYPE-III SUPERCONDUCTORS

Baryon spectroscopy in chiral color dielectric model, 17:7981 (IA;IN)
XYLENES
The influence of interfacial properties on two-phase liquid flow of organic contaminants in groundwater: Progress report, January 1, 1991–September 31, 1991, 17:7572 (R;US)

Y

Y*RESONANCES
See BARYONS
Y-12 PLANT
PCB annual report for Oak Ridge National Laboratory EPA Identification Number - TN 1890090003, February 6, 1990–December 31, 1990, 17:7587 (R;US)
Revised RCRA Closure Plan for the Interim Drum Yard (S-030) at the Oak Ridge Y-12 Plant, Oak Ridge, Tennessee: Revision of Y/TS-347/1R3, 17:6468 (R;US)
YANG-MILLS THEORY
Path integral for the Yang-Mills theory in a nonperturbative region, 17:7890 (R;SU)
YANKEE ROWE REACTOR
See ROWE YANKEE REACTOR
YEARS LIVING RADIOISOTOPES
See also AMERICIUM 241
AMERICIUM 242
BERYLLIUM 10
CALCIUM 41
CALIFORNIUM 252

POTASSIUM 40
PROMETHIUM 147
RADIUM 226
SAMARIUM 151
STRONTIUM 90
TRITIUM
URANIUM 235
URANIUM 238
Natural production long-lived radionuclides in geological formations: Final report for the period 15 April 1988 - 31 August 1991, 17:7582 (R;XA)
YIELD (FISSION)
See FISSION YIELD
YOSHIDA SARCOMA
See EXPERIMENTAL NEOPLASMS
YTTERBIUM
Study of N=88 and N=90 isotones in the IBM-1, 17:8028 (IA;IN)
YTTERBIUM 158
Evolution of nuclear collectivity at high spins and temperatures, 17:7999 (R;US)
YTTERBIUM 163
Signature effects in odd-Yb isotopes, 17:8017 (IA;IN)
YTTERBIUM 165
Signature effects in odd-Yb isotopes, 17:8017 (IA;IN)
YTTERBIUM 174
Intensities of two-quanta cascades at different excitation energies of compound nuclei ^{146}Nd, ^{174}Yb, ^{183}W, 17:8045 (R;SU)
YTTERBIUM OXIDES
Synthesis of c-oriented $YbBa_2Cu_3O_{7-\delta}$ films on single and polycrystalline substrates by oxidation of liquid alloys, 17:6964 (R;US)
YTTRIUM ALLOYS
A non-contaminating method for preparing intra-rare-earth alloys containing volatile and non-volatile metals, 17:6923 (R;US)
YTTRIUM ALUMINIUM GARNETS
See ALUMINIUM OXIDES
YTTRIUM COMPLEXES
Synthesis and chemistry of yttrium and lanthanide metal complexes: Progress report, March 15, 1991–March 14, 1992, 17:7069 (R;US)
YTTRIUM OXIDES
Flux motion and dissipation in high-temperature superconductors, 17:6962 (R;US)
Flux pinning behavior in twin boundaries of single crystal $YBa_2Cu_3O_{7-\delta}$, 17:6961 (R;US)
Superconducting properties of high density Y-Ba-Cu-O sintered samples, 17:7002 (R;IT)
Transport properties of Bi-Sr-Ca-Cu-O and Y-Ba-Cu-O single crystals, 17:6975 (R;IT)
YUCCA MOUNTAIN
Natural gels in the Yucca Mountain Area, Nevada, USA, 17:6402 (R;US)
Site characterization progress report: Yucca Mountain, Nevada, October 1, 1990–March 31, 1991: Number 4, 17:6379 (R;US)
The impact of episodic nonequilibrium fracture-matrix flow on geological repository performance, 17:6440 (R;US)

Z

Z NEUTRAL BOSONS
Extra Z' boson and top quark mass, 17:7921 (R;SU)
On gauge invariance of the renormalized Z^0 rest mass, 17:7979 (R;XA)
QCD corrections to final state photon bremsstrahlung in e^+e^- annihilation, 17:7936 (R;DE)
Superstring Z' boson at the $c\tau$ factory, 17:7891 (R;SU;In Russian)
The B_c and B-bar$_c$ mesons accessible to experiments through Z^0 boson decay, 17:7977 (R;XA)
ZEOLITES
Binding and catalytic reduction of NO by transition metal aluminosilicates, 17:6237 (RA;US)
ZINC COMPOUNDS
See also ZINC OXIDES
Enhanced durability of desulfurization sorbents for fluidized-bed applications, 17:6164 (R;US)
ZINC ISOTOPES
IBM and the dynamic HF fermion basis for Zn isotopes, 17:8026 (IA;IN)
ZINC OXIDES
Comparative study of the reactions of metal oxides with SO_2 and H_2S, 17:6234 (RA;US)

Mechanical properties of materials with nanometer scale microstructures: Progress report, 1 April 1989 to Present, 17:6909 (R;US)
Mechanistic and kinetic studies of high-temperature coal gas desulfurization sorbents, 17:6158 (RA;US)
Mechanistic and kinetic studies of high-temperature coal gas desulfurization sorbents: Final report, July 1988–July 1991, 17:6169 (R;US)
Probe molecule studies: Active species in alcohol synthesis, 17:6140 (RA;US)

ZION STATION UNIT-1
See ZION-1 REACTOR

ZION STATION UNIT-2
See ZION-2 REACTOR

ZION-1 REACTOR
Adiabatic equilibrium models for direct containment heating, 17:6757 (R;US)
The Integral Effects Test (IET-1) in the Surtsey Test Facility, 17:6759 (R;US)

ZION-2 REACTOR
Adiabatic equilibrium models for direct containment heating, 17:6757 (R;US)
The Integral Effects Test (IET-1) in the Surtsey Test Facility, 17:6759 (R;US)

ZIRCALOY
See also ALLOY-ZR98SN-4
Chemical research and development monthly report and quarterly synopsis, March 1957, 17:6331 (R;US)
Mechanistic understanding of irradiation-induced corrosion of zirconium alloys in nuclear power plants: Stimuli, status, and outlook, 17:6643 (R;US)

ZIRCALOY 2
Modeling and experimental measurement of residual stress, 17:6955 (RA;US)

ZIRCALOY 4
Zircaloy oxidation and cladding deformation in PWR-specific CORA experiments, 17:6727 (R;DE)

ZIRCONIUM
Analysis of Fe and Ti based alloys for zirconium content by 14 MeV NAA, 17:7049 (IA;IN)

ZIRCONIUM 90 TARGET
The (^{3}He, ^{7}Be) reaction on light and medium mass nuclei, 17:8118 (R;XA)

ZIRCONIUM BASE ALLOYS
See also ZIRCALOY
Hydrogen absorption by zirconium alloy cladding tube with surface oxide film, 17:6929 (R;JP)
Investigation of high temperature water steam oxidation of ZrNb1, 17:6957 (R;DE;In German)
Mechanistic understanding of irradiation-induced corrosion of zirconium alloys in nuclear power plants: Stimuli, status, and outlook, 17:6643 (R;US)
Radiation-heterogeneous processes in contact of metallic materials (zirconium alloys and aluminium) of nuclear reactors with water, 17:7110 (IA;SU;In Russian)

ZIRCONIUM OXIDES
Equilibrium and non-equilibrium metal-ceramic interfaces, 17:6896 (R;US)

Contract Number Index

Numbers assigned to DOE contracts announced in documents in this publication are listed. Contract numbers are sorted alphanumerically and list the primary corporate author of the document cited, the citation number, and the report number or other document identification.

Report Number Index

The report number index consists of the alphanumeric identifiers assigned to report literature as well as patent and conference literature cited in this publication. Entries provide the abstract number; the source(s) of availability of the document; the GPO file prefix for GPO depository library documents; the order number for OSTI and NTIS report ordering purposes; and, if the document was distributed under the DOE distribution program, the category number is shown for paper copy (PC), microfiche (MF), or no distribution (ND). These categories are included to assist DOE librarians in responding to requests for reports in their collections. The index also lists secondary numbers, with the corresponding abstract numbers and cross-references to other identifying numbers.

Codes Used on Index Lines

Following the citation numbers in the Corporate Author, Personal Author, and Subject Indexes, codes are used to designate the type of document, country of publication, and language of the document, e.g., (R;SU;In Russian). The language designator does not appear if the document is published in English.

ORDER FORM

DOE and DOE Contractors: Fill in Parts I, II, and IV. **Others:** Fill in Parts I, III, and IV. Mark appropriate blanks in Part IV to indicate quantity and form (microfiche or paper copy).

I. SHIPPING AND PAYMENT INFORMATION

Ordering Address

Name Telephone

Address

City State Zip

Shipping Address (if different from above)

Name

Address

City State Zip

SIGNATURE (Required to validate ALL orders)

II. OSTI ORDERS (DOE and DOE contractors can order from OSTI.)

☐ Charge OSTI deposit account no.

Mail orders to:
U.S. Department of Energy
Office of Scientific and Technical Information
P.O. Box 62
Oak Ridge, TN 37831

III. NTIS ORDERS

☐ Charge NTIS deposit account no.

☐ Check/Money Order enclosed for $

☐ Charge to my ☐ American Express ☐ VISA ☐ Mastercard

Account Number Card expiration date

☐ Ship and Bill (see below for restrictions)

Employer identification number (9 digits) _ _–_ _ _ _ _ _ _

Purchase Order number

Phone number of billing office

(Required for Ship & Bill orders)

Ship & Bill service is restricted to North American business locations for an extra $7.50 per order (or per Custom Search). The business' employer identification number plus the phone number of the office paying the bill are required to process these requests. A late payment charge will be applied to billings more than 30 days overdue. Prepaying, using an NTIS Deposit Account or a charge account, speeds order processing. Be sure payment and order are sent together. Checks, payable to NTIS, must be in U.S. dollars.

Mail orders to:
U.S. Department of Commerce
National Technical Information Service
5285 Port Royal Road
Springfield, VA 22161

IF NO METHOD OF PAYMENT IS INDICATED, YOUR ORDER WILL BE RETURNED TO YOU AS A PRICE QUOTE UNPROCESSED.

Federal Depository Library Program

As a result of an agreement between the U.S. Government Printing Office (GPO) and the Department of Energy, beginning in 1984 DOE reports with unlimited distribution are now included in the Federal Depository Library Program. The Regional Depository Libraries listed below receive and retain at least one copy of nearly every Federal Government publication, either in printed or microfilm form, for use by the general public. These libraries provide reference services and interlibrary loans; however, they are not sales outlets. You may wish to ask your local library to contact a Regional Depository to help you locate specific publications, or you may contact the Regional Depository yourself. Do not send checks or orders to these libraries.
